

Contents

1	Introduction	1
1.1	Motivation: Geothermal Background	1
1.2	Literature on Rock Mechanics and Geomechanics	6
1.3	Outline	7
2	Preliminaries	11
2.1	Basic Notation	11
2.2	Linear Operators and Bilinear Forms	13
2.3	Function Spaces	16
2.4	Integral Calculus	31
2.5	Differential Equations	34
3	Physical and Mathematical Foundation	39
3.1	Physical Background	39
3.1.1	Linear Elasticity	39
3.1.2	Poroelectricity	45
3.2	Existence and Uniqueness in Quasistatic Poroelectricity	51
4	Boundary Layer Potentials in Poroelectricity	65
4.1	Green's Identities in Poroelectricity	66
4.2	Fundamental Solutions	70
4.3	Boundary Integral Representations	80
5	Methods of Fundamental Solutions in Poroelectricity	91
5.1	The Method of Fundamental Solutions: An Overview	91
5.2	Density Results for the MFS in the Case of Poroelectricity	97
5.2.1	Density Results in the Case of Vanishing Initial Conditions	99
5.2.2	Density Results for Non-vanishing Initial Conditions	111
5.2.3	Alternative Aspects to the Method of Fundamental Solutions	113

6 Numerical Results	115
6.1 Implementation Details	115
6.2 Parameter Studies on the Square $(-1, 1)^2$	125
6.2.1 Varying Spatial Method Parameters	127
6.2.2 Varying Temporal Parameters for Negative Times	145
6.2.3 Varying Temporal Parameters for Positive Times	155
6.2.4 Error Distribution in Time and Space	164
6.3 Using a Gaussian Least-Squares Method vs. Using SVD	178
6.4 Comparison with the Ansatz Including fi-Parts	180
6.5 A Time-Marching Scheme	181
6.6 Examples with Steeper Gradients	185
6.7 An Example on the Cube $(-1, 1)^3$	196
6.8 Concluding Remarks	206
7 Conclusion and Outlook	209
7.1 Summary of Main Results	209
7.2 Future Research Perspectives	215
A Fundamental Stresses and Fluid Velocities	219
References	223

A Method of Fundamental Solutions in Poroelasticity to
Model the Stress Field in Geothermal Reservoirs

Augustin, M.A.

2015, XII, 235 p. 69 illus., 32 illus. in color., Softcover

ISBN: 978-3-319-17078-7
