

Preface

This monograph emerged from 4 years of doctoral studies at the Catholic University of Milan. Many people have helped me in various ways while I was working on the thesis. Greatest thanks are due to Laura Barbieri, my supervisor, for her comments, helpful advice, guidance, and continuous support. I am also grateful to comments and discussions of seminar's participants and professors at the Catholic University of Milan (IT), in particular Gianluca Femminis, Domenico Delli Gatti, Marco Lossani, Maurizio Motolese, and Lorenzo Cappellari. I would also like to thank professors at International Center of Econometrics (CIdE), summer school "Bayesian Methods in Economics and Finance" Bertinoro (IT), 2012. I also greatly benefited from comments and discussions of participants at Ph.D. Conference "International Development 2013", University of East Anglia, Norwich (UK), and participants at 53rd Congress of European Regional Science Association (ERSA) at the University of Palermo (IT).

On a personal level, I owe gratitude to my relatives and a very special person, Precious Ann, for their steady and kind encouragement.
