

Contents

1	Introduction	1
1.1	The Art of Molecular Modeling and Simulation	3
1.2	Focus and Structure of This Work	6
	References	8
2	Molecular Dynamics Simulation	11
2.1	Molecular Models and Potentials	11
2.2	Statistical Ensembles	17
2.3	Algorithms for Nearest-Neighbor Search	18
2.4	Characteristics of Large-Scale Molecular Dynamics Simulation of Fluids	21
2.5	Simulation Code Mardyn	23
	References	27
3	Parallelization of MD Algorithms and Load Balancing	31
3.1	Target Systems	32
3.2	Shared-Memory Parallelization	37
3.3	Spatial Domain Decomposition	40
3.4	Load Balancing Based on KD-Trees	41
	References	43
4	Efficient Implementation of the Force Calculation in MD Simulations	45
4.1	Memory Access Optimizations	46
4.2	Vectorization	48
4.3	Optimization Possibilities for Monatomic Fluids	54
	References	57

5	Experiments	59
5.1	Performance on SuperMUC.	60
5.2	Performance on the Intel Xeon Phi Coprocessor.	67
5.3	Multi-Trillion Particle Simulations	70
5.4	Summary	72
	References	73
6	Conclusion	75

Supercomputing for Molecular Dynamics Simulations

Handling Multi-Trillion Particles in Nanofluidics

Heinecke, A.; Eckhardt, W.; Horsch, M.; Bungartz, H.-J.

2015, X, 76 p. 35 illus., 13 illus. in color., Softcover

ISBN: 978-3-319-17147-0
