<b>1</b>	<b>Relaying: An Overview</b>	1
1.1	Half-Duplex Relaying	1
1.2	Full-Duplex Relaying	3
1.3	Relay Functions	4
1.4	Organization of this Brief	5
1.5	Notation	6
	References	7
<b>2</b>	<b>Relay Protocols</b>	11
2.1	General System Model	11
2.2	HD Protocols	12
2.2.1	NAF Protocol	12
2.2.2	DT Protocol	14
2.2.3	OAF Protocol	14
2.2.4	DHAF Protocol	15
2.2.5	TWAF Protocol	15
2.3	FD Protocols	16
2.3.1	LR Protocol	16
2.3.2	DHAF Protocol	18
2.4	Concluding Remarks	19
	References	19
<b>3</b>	<b>Half-Duplex AF Relaying: Capacity and Power Allocation</b>	
	<b>Over Static Channels</b>	21
3.1	Problem Formulation	22
3.2	Capacity Under Individual Power Constraints	23
3.3	Capacity Under Joint Power Constraints	28
3.4	High and Low Power Regions	31
3.4.1	Per-Node Power Constraints	31
3.4.2	Global Power Constraint	32

3.5	Illustrative Examples .....	33
3.5.1	Symmetric Network Model .....	34
3.5.2	Linear Network Model .....	35
3.6	Concluding Remarks .....	38
	References .....	38
<b>4</b>	<b>Half-Duplex AF Relaying: Achievable Rate and Power</b>	
	<b>Allocation Over Fading Channels .....</b>	<b>41</b>
4.1	Problem Formulation .....	42
4.2	Achievable Rates and Closed-Form Approximations .....	44
4.2.1	OW DHAF Systems .....	45
4.2.2	OW Cooperative Systems .....	47
4.2.3	TW Systems .....	49
4.2.4	Remarks .....	50
4.3	Optimal Power Allocation .....	51
4.3.1	DHAF Systems .....	52
4.3.2	Cooperative Systems .....	52
4.3.3	TW Systems .....	53
4.4	Closed-Form Solution for DHAF System with CI Coefficient .....	54
4.5	Illustrative Examples .....	55
4.5.1	Tightness of the Proposed Approximations .....	56
4.5.2	Optimal Power Allocation .....	57
4.6	Concluding Remarks .....	61
	References .....	61
<b>5</b>	<b>Half-Duplex AF Relaying: Adaptation Policies .....</b>	<b>63</b>
5.1	Problem Formulation .....	64
5.2	Optimal Power Adaptation Schemes .....	65
5.2.1	OAF System .....	66
5.2.2	NAF System .....	67
5.2.3	TW System .....	70
5.3	Illustrative Examples .....	71
5.4	Concluding Remarks .....	73
	References .....	73
<b>6</b>	<b>Half-Duplex AF Relaying: Error Performance and Precoding .....</b>	<b>75</b>
6.1	System Model .....	76
6.2	Performance Analysis .....	78
6.3	Diversity Benefits in Error-Floor Regions .....	81
6.3.1	Diversity and Coding Gain Functions .....	81
6.3.2	Optimal Class of Precoders .....	83
6.3.3	Design of Superposition Angles for Independent Mappings .....	85
6.4	Near-Capacity Design in Turbo Pinch-Off Areas .....	86
6.4.1	Multi-D Mapping in Precoded Multiple Cooperative Frames .....	87

6.4.2	EXIT Chart Analysis .....	88
6.5	Illustrative Examples .....	90
6.6	Concluding Remarks .....	92
	References .....	93
<b>7</b>	<b>Full-Duplex AF Relaying: Capacity Under Residual Self-Interference .....</b>	<b>95</b>
7.1	Problem Formulation .....	96
7.2	Capacity and Optimal Power Allocation .....	97
7.3	Asymptotic Analysis .....	98
7.3.1	Large Source Power, Fixed Relay Power .....	98
7.3.2	Large Relay Power, Fixed Source Power .....	99
7.3.3	Large Source and Relay Power .....	99
7.3.4	Large Global Power .....	99
7.4	Illustrative Examples and Comparisons to HD Schemes .....	100
7.5	Concluding Remarks .....	102
	References .....	102
<b>8</b>	<b>Full-Duplex AF Relaying: Error Performance Under Residual Self-Interference .....</b>	<b>105</b>
8.1	System Model .....	106
8.2	PEP Analysis and Tight BER Bounds .....	107
8.2.1	PEP for the LR System .....	108
8.2.2	PEP for the DH System .....	110
8.2.3	Tight BER Bounds of BICM-ID Systems .....	111
8.3	Diversity and Coding Gain Analysis .....	112
8.3.1	LR Analysis .....	112
8.3.2	DH Analysis .....	115
8.4	Illustrative Examples .....	117
8.4.1	LR Examples .....	117
8.4.2	DH Examples .....	119
8.5	Concluding Remarks .....	120
	References .....	121

Amplify-and-Forward Relaying in Wireless  
Communications

Rodriguez, L.J.; Tran, N.; Le-Ngoc, T.

2015, XIV, 122 p. 37 illus., 31 illus. in color., Softcover
