

Contents

1 General Introduction	1
Andrzej Witkowski	
References	3
2 General Physical Properties of CO₂ in Compression and Transportation Processes	5
Andrzej Witkowski and Mirosław Majkut	
2.1 Physical Properties of Carbon Dioxide	5
2.2 Effects of Impurities on the CO ₂ Phase Diagram	9
2.3 Establishing CO ₂ Pipeline Pressure	11
References	11
3 Compression and Pumping Technology Options	13
Andrzej Witkowski and Mirosław Majkut	
3.1 Introduction	13
3.2 Thermodynamic Analysis	14
3.3 Boundary Conditions and Characteristics of the Compressing Process	15
3.3.1 Methods Used to Determine Compression Processes	15
3.3.2 Polytropic Process: Real Gas Behavior	16
3.3.3 Calculation Results	17
3.4 Compression Technology Options	17
3.4.1 Ordinary and Integrally Geared Centrifugal Compressors	17
3.4.2 Ramgen's Supersonic Shock Wave Compressor	19
3.4.3 Compression and Pumping with Supercritical Liquefaction	20
3.5 Overview of CO ₂ Compression Strategies	21
3.5.1 In-line Multistage Centrifugal Compressors with Interstage Cooling	21
3.5.2 Multistage Centrifugal Integrally Geared Compressors	22

3.5.3	Advanced Supersonic Shock Wave Compressors	24
3.5.4	Compression and Pumping with Supercritical Liquefaction	25
3.5.5	Compression and Pumping with Subcritical Liquefaction	26
3.5.6	Compression and Refrigeration Pumping	27
3.5.7	Summary of Compression Options	31
3.6	Conclusions	33
	References	34
4	Reference Options of the CO₂ Compression Processes Available for Technological Concepts of a 900 MW Pulverized Coal-Fired Power Plant	37

4.1	Introduction	38
4.2	Compression Processes Using Compressors Only	39
4.2.1	Ordinary Two-Shaft Multistage Centrifugal Compressor.	39
4.2.2	Selection of Intersection/Interstage Coolers.	44
4.2.3	Eight-Stage Integrally Geared Compressor with Seven Intercoolers	46
4.3	Compression and Pumping.	56
4.3.1	Introduction	56
4.3.2	Six-Stage Integrally Geared Centrifugal Compressor	57
4.3.3	Pumping Process	61
4.3.4	Summary of Compression Options	62
	References	62
5	The Use of Waste Heat from the CO₂ Compression Process	65
	Sebastian Rulik and Andrzej Witkowski	
5.1	Basic Assumptions and Subject of Analysis	65
5.2	Analysis of Heat Recovery from the Compression Process.	66
5.3	8-Stage Integrally Geared CO ₂ Compressor with Heat Recovery	68
5.4	2-Stage Shock Wave Compressor with Heat Recovery	69
5.5	Conclusions	70
	References	71
6	Analysis of Transportation Systems for CO₂ Sequestration	73
	Andrzej Witkowski and Mirosław Majkut	
6.1	Introduction	74
6.2	CO ₂ Properties in Pipeline Transport	75
6.3	Pressure Loss Correlation.	76

6.4	Results and Discussion	77
6.4.1	Comparison Between Adiabatic and Isothermal Transmission	77
6.4.2	Energy Balance with Surroundings	79
6.5	Conclusions	91
	References	92
7	Analysis of Risk Related to Carbon Dioxide Pipeline Transport	95
	Andrzej Rusin and Katarzyna Stolecka	
7.1	Risk Definition	95
7.1.1	Risk Analysis	95
7.1.2	Risk Acceptability Criteria	98
7.2	Identification of Hazardous Scenarios	99
7.2.1	Hazards in CCS Technologies	99
7.2.2	Hazards Involved with Carbon Dioxide Storage	100
7.2.3	Hazards Involved with Carbon Dioxide Storage in Tanks	102
7.2.4	Hazards Involved with Carbon Dioxide Transport	104
7.3	Probability of Occurrence of Hazardous Scenarios	105
7.3.1	A Pipeline Failure Event Tree	105
7.3.2	Probability of Pipeline Damage Due to Corrosion	107
7.4	Assessment of Consequences of Damage to a Pipeline Transporting CO ₂	112
7.4.1	Analysis of Phenomena Occurring in a Damaged Pipeline	112
7.4.2	Carbon Dioxide Impact Consequences	116
7.4.3	Estimation of Zones with Elevated Concentrations of Carbon Dioxide	120
7.4.4	Hazard Zones Related to Carbon Dioxide Tanks	123
7.5	Estimation of Risk Posed by Carbon Dioxide Pipeline Transport	126
7.5.1	Individual Risk Estimation	126
7.5.2	Social Risk Estimation	127
7.6	Methods of Risk Reduction—Optimization of Safety Valves Spacing	131
