

Contents

1	Introduction	1
1.1	The Standard Model of Particle Physics	1
1.2	The Problem of Massive Particles in the Standard Model	6
1.3	Synopsis and Guideline to the Book	8
	References	12
2	The Higgs Boson in the Standard Model of Particle Physics	15
2.1	The Principle of Gauge Symmetries	15
2.1.1	Extension to Non-Abelian Gauge Symmetries	18
2.2	The Electroweak Gauge Theory	23
2.2.1	Extension to a Theory of Electroweak Interactions	25
2.3	Electroweak Symmetry Breaking and the Higgs Boson	32
2.3.1	The Goldstone Model	32
2.3.2	Extension to a Gauge Theory	34
2.4	The Electroweak Sector of the Standard Model of Particle Physics	36
2.4.1	Custodial Symmetry	40
2.4.2	Giving Masses to Fermions	43
2.4.3	Summary and Conclusions	47
	References	51
3	Higgs Boson Searches Before the Advent of the Large Hadron Collider	53
3.1	Constraints Within the Theory	53
3.1.1	The Unitarity Bound	55
3.1.2	The Goldstone Potential at Higher Orders	57
3.2	Indirect Constraints from Electroweak Precision Measurements	60
3.2.1	Electroweak Precision Observables	60
3.2.2	Statistical Model	62

3.2.3	Results of the Likelihood Analysis.	65
3.3	Direct Searches at the Large Electron Positron Collider	68
3.3.1	Statistical Framework.	69
3.3.2	Direct Search Results.	74
3.4	Direct Searches at the Tevatron Proton Anti-Proton Collider.	76
	References	78
4	Discovery of the Higgs Boson at the Large Hadron Collider.	81
4.1	Setting up the Scene for Discovery	81
4.1.1	The Large Hadron Collider.	81
4.1.2	Main Experiments and Event Reconstruction.	83
4.1.3	First Measurements of Known Standard Model Processes	89
4.2	The Eve of the Hunt for the Higgs Boson.	92
4.2.1	Decay Channels and Production Modes	92
4.2.2	First Searches and Statistical Methods	96
4.3	The Discovery of a New Particle in the Bosonic Decay Channels.	99
4.3.1	The Signal in the $H \rightarrow \gamma\gamma$ Decay Channel	102
4.3.2	The Signal in the $H \rightarrow ZZ$ Decay Channel	108
4.3.3	Evidence of the Signal in the $H \rightarrow WW$ Decay Channel	114
4.3.4	Conclusions on the Bosonic Decay Channels	120
4.4	Signs of the New Particle in the Fermionic Decay Channels.	122
4.4.1	The Coupling to Leptons	123
4.4.2	The Coupling to Quarks	135
4.4.3	Conclusions on the Coupling to Fermions.	146
	References	148
5	Properties of the New Particle.	151
5.1	Mass and Decay Width of the New Particle	151
5.1.1	Canonical Estimate of the Mass and Decay Width	151
5.1.2	Decay Width Estimate from the Off-Shell Cross Section	155
5.2	Spin and CP Symmetry	161
5.2.1	Groundwork for Spin and CP Analyses	161
5.2.2	Estimate of Spin and CP in the $H \rightarrow ZZ$ Decay Channel	164

5.3	Coupling Structure.	169
5.3.1	Prerequisite Studies	169
5.3.2	Statistical Model	172
5.3.3	Test of the Coupling Structure.	174
	References	180
6	Conclusions	183
	References	187

The Higgs Boson Discovery at the Large Hadron Collider
Wolf, R.

2015, IX, 187 p. 51 illus., 44 illus. in color., Hardcover

ISBN: 978-3-319-18511-8
