

Contents

1	Introduction	1
1.1	Ultra-high Energy Astroparticle Physics	1
1.2	The Neutrino – A Perfect Cosmic Messenger?	3
1.3	Thesis Overview	5
1.3.1	Theory	5
1.3.2	Detector Hardware and Calibration Efforts	6
1.3.3	Data Analysis	7
	References	8

Part I Theory

2	The GZK Neutrino Flux	13
2.1	Neutrino Production in the GZK Mechanism	14
2.2	Dependencies and Implications	17
2.2.1	The Composition of Ultra-high Energy Cosmic Rays	18
2.2.2	The Cosmic Ray Emission Spectrum	19
2.2.3	The Evolution of Cosmic Ray Sources	20
2.2.4	Neutrino Flux Expectations Under Varying Assumptions	21
	References	23
3	The Askaryan Effect in Dense Media	25
3.1	Emission of Radio Waves from Neutrino-Induced Cascades	25
3.1.1	Negative Charge Excess in Electromagnetic Cascades	25
3.1.2	Coherent Emission of Radio Waves from a Charge Excess in Electromagnetic Cascades	27
3.1.3	The Influence of the LPM Effect	30

3.1.4	Askaryan Emission in the Time Domain	31
3.1.5	Simulation Codes	31
3.2	Verifications of the Askaryan Effect	32
	References	33

Part II Detector Hardware and Calibration Efforts

4	The Askaryan Radio Array (ARA)	37
4.1	The General Detector Setup	37
4.1.1	ARA Antennas	41
4.1.2	Signal Chain.	44
4.2	Status and Performance of the Currently Installed ARA Stations	48
4.3	The ARA Detector in Comparison to Other Neutrino Detectors	49
	References	56
5	The Calibration of the Ice Ray Sampler (IRS2) Chip	59
5.1	The IRS2 Chip	59
5.1.1	Sample Timing	60
5.1.2	Sample Storage and Digitization	62
5.2	The Calibration	63
5.2.1	The Data Set	63
5.2.2	Timing Calibration	64
5.2.3	Voltage Calibration	69
5.2.4	The Frequency Response of the IRS2 Chip	73
5.2.5	The Temperature Dependence of the Sample Timing.	74
5.2.6	Calibration Checks	76
	References	79
6	The Calibration of the ARA Station Geometry	81
6.1	ARA Coordinates	81
6.2	Uncertainties on the ARA Station Geometry and Cable Delays	82
6.3	The Fit of the Geometry Parameters	83
6.3.1	The General Approach.	83
6.3.2	Initial Assumptions	85
6.3.3	Results and Cross Checks	86
6.3.4	Errors on the Geometrical Calibration	91
	Reference	92

Part III Data Analysis

7	Simulations	95
7.1	The ARA Simulation	95
7.2	Effective Volume, Effective Area and Neutrino Limits	98
	References	100
8	Algorithms for the ARA Data Analysis	101
8.1	The Signal to Noise Ratio	101
8.2	Thermal Noise Rejection	102
8.3	The Time Sequence Algorithm	102
8.3.1	Efficiency Comparison of Simulation and Data	107
8.3.2	Filter and Trigger Studies	109
8.4	The Vertex Reconstruction Algorithm	110
8.4.1	Timing Determination	111
8.4.2	Matrix Based Vertex Reconstruction	113
8.4.3	Channel Pair Selection	116
8.4.4	Reconstruction Quality Parameters	117
8.4.5	Performance on Simulation and Recorded Data	119
	References	124
9	Signal Discrimination in the ARA02-ARA03 Data	125
9.1	String Spark Rejection	126
9.2	Cut Adjustments for Background Rejection	128
9.3	The Background Estimation	132
10	Data Analysis Results	139
10.1	Signal Estimation and Neutrino Flux Limits	139
10.2	Systematic Errors	142
10.3	Coincident Event Analysis	144
	References	148
11	Summary and Outlook	149
11.1	Summary and Discussion	149
11.2	Outlook	152
	References	153
	Appendix A: Noise Modeling for AraSim	155
	Appendix B: Details on the Systematic Error Estimation	157

Development of a Sub-glacial Radio Telescope for the
Detection of GZK Neutrinos

Meures, Th.

2015, XIII, 159 p. 111 illus., 69 illus. in color., Hardcover

ISBN: 978-3-319-18755-6
