| | | |
|----------|--|-----------|
| 1 | General View of Pole Solutions in Flame Front Propagation | 1 |
| 2 | Pole-Dynamics in Unstable Front Propagation: The Case of The Channel Geometry | 11 |
| 2.1 | Introduction. | 11 |
| 2.2 | Equations of Motion and Pole-Decomposition in the Channel Geometry | 13 |
| 2.3 | Linear Stability Analysis in Channel Geometry | 15 |
| 2.3.1 | Fourier Decomposition and Eigenvalues | 16 |
| 2.3.2 | Qualitative Understanding Using Pole-Analysis | 18 |
| 2.3.3 | Dynamics Near Marginality | 18 |
| 2.3.4 | Excitable System. | 20 |
| 2.4 | Initial Conditions, Pole Decomposition and Coarsening | 21 |
| 2.4.1 | Pole Expansion: General Comments. | 21 |
| 2.4.2 | The Initial Stages of the Front Evolution: The Exponential Stage and the Inverse Cascade. | 23 |
| 2.4.3 | Inverse Cascade in the Presence of Noise | 26 |
| 2.5 | Acceleration of the Premixed Flame Front, Pole Dynamics and Noise | 27 |
| 2.5.1 | Noisy Simulations | 28 |
| 2.5.2 | Calculation of the Number of Poles in the System. | 31 |
| 2.5.3 | Theoretical Discussion of the Effect of Noise | 35 |
| 2.5.4 | The Acceleration of the Premixed Flame Front Because of Noise. | 43 |
| 2.6 | Comparison with Experiment for Premixed Flame in Channel . . . | 45 |
| 2.7 | Summary and Conclusions | 46 |
| | Appendix: Derivation of Michelson Sivashinsky Equation. | 47 |

| | | |
|----------|--|------------|
| 3 | Using of Pole Dynamics for Stability Analysis of Premixed Flame Fronts: Dynamical Systems Approach in the Complex Plane | 55 |
| 3.1 | Introduction. | 55 |
| 3.2 | Linear Stability Analysis in Channel Geometry | 56 |
| 3.3 | Linear Stability in Terms of Complex Singularities | 58 |
| 3.3.1 | The Modes Associated with the Giant Cusp | 59 |
| 3.3.2 | Modes Related to Additional Poles | 61 |
| 3.4 | Conclusions | 65 |
| 4 | Dynamics and Wrinkling of Radially Propagating Fronts Inferred from Scaling Laws in Channel Geometries | 67 |
| 4.1 | Introduction. | 67 |
| 4.2 | The Geometry of Developing Premixed Flame Fronts: Analysis with Pole Decomposition | 68 |
| 4.3 | Comparison with Experiment for Expanded Premixed Flames | 77 |
| 4.4 | Conclusions | 83 |
| 5 | Laplacian Growth Without Surface Tension in Filtration Combustion: Analytical Pole Solution | 85 |
| 5.1 | Introduction. | 85 |
| 5.2 | Asymptotic Single Saffman-Taylor “finger” Formation Without Surface Tension. | 88 |
| 5.2.1 | Asymptotic Behaviour of the Poles in the Mathematical Plane. | 90 |
| 5.2.2 | Theorem About Coalescence of the Poles | 94 |
| 5.2.3 | The Final Result | 95 |
| 5.3 | Saffman-Taylor “finger” Formation with Half of the Channel Size | 97 |
| 5.4 | Comparison Laplacian Growth with Experiment for Filtration Combustion | 102 |
| 5.5 | Conclusions | 104 |
| | Appendix 1: Proof of Theorems. | 104 |
| | Appendix 2: Filtration Combustion—Basic Equations. | 105 |
| 6 | Summary | 109 |
| | Erratum to: Pole Solutions for Flame Front Propagation | E1 |
| | Bibliography | 111 |

Pole Solutions for Flame Front Propagation

Kupervasser, O.

2015, XII, 118 p. 37 illus., 10 illus. in color., Hardcover

ISBN: 978-3-319-18844-7
