

Contents

1	Introduction	1
2	Systems governed by the wave equation	3
2.1	Dirichlet boundary control	4
2.2	Neumann boundary control	16
2.3	Robin boundary control	22
3	Exact Controllability	29
3.1	Dirichlet boundary control	30
3.2	Neumann boundary control	39
3.2.1	A traveling waves solution	39
3.2.2	Exact Controllability with Neumann boundary control	44
3.3	Robin boundary control	45
4	Optimal Exact Control	47
4.1	Optimal Dirichlet control	47
4.2	Optimal Neumann control	54
4.3	An example for the destabilizing effect of delay	63
5	Boundary Stabilization	69
5.1	Telegraph equation	69
5.2	Neumann control	73
5.3	Time Delay	79
5.3.1	Definition of System \mathbf{S}	79
5.3.2	Well-posedness of System \mathbf{S}	79
5.3.3	Exponential Stability of System \mathbf{S}	82
5.3.4	Destabilization of System \mathbf{S} by small delays	85
6	Nonlinear Systems	89
6.1	The Korteweg-de Vries Equation (KdV)	89
6.1.1	Well-posedness of the linearized system	90
6.1.2	A traveling waves solution for the linearized system	94
6.1.3	Well-posedness for the nonlinear system	95

6.1.4	A traveling wave solution for the nonlinear system	97
6.1.5	The linearized system with critical length: An example for a system that is not exactly controllable	99
6.2	The isothermal Euler equations	105
6.3	An initial boundary value problem for the Burgers equation	108
6.4	The Burgers equation with source term	112
7	Distributions	127
7.1	Distributional derivatives	131
	Bibliography	135
	Index	139

Optimal Boundary Control and Boundary Stabilization of
Hyperbolic Systems

Gugat, M.

2015, VIII, 140 p. 3 illus., 2 illus. in color., Softcover

ISBN: 978-3-319-18889-8
