PREFACE

vii

Chapter 1. BASIC CONCEPTS OF MANIFOLDS	1
1.1. Two definitions of a manifold and examples	1
1.2. Smooth maps between manifolds	10
1.3. Induced smooth structures	14
1.4. Immersions and Submersions	16
1.5. Submanifolds	22
1.6. Further examples of manifolds	26
1.7. Quotient manifolds	30
1.8. Manifolds with boundary and corner	36
Chapter 2. APPROXIMATION THEOREMS AND WHITNEY'S EMBEDDING	43
2.1. Smooth partition unity	43
2.2. Smooth approximations to continuous maps	51
2.3. Sard's theorem	54
2.4. Approximations by immersions	59
2.5. Whitney's embedding theorem	62
2.6. Homotopy of smooth maps	63
2.7. Stability of smooth maps	65
Chapter 3. LINEAR STRUCTURES ON MANIFOLDS	69
3.1. Tangent spaces and derivative maps	69
3.2. Vector Fields and Flows	76
3.3. Exterior algebra	82
3.4. Differential forms	88
3.5. Derivations of algebra of differential forms	90
3.6. Darboux-Weinstein theorems	95
Chapter 4. RIEMANNIAN MANIFOLDS	105
4.1. Riemannian Metric	105
4.2. Geodesics on a Manifold	112
4.3. Riemannian connection and geodesics	116
4.4. Exponential maps	122
4.5. Hopf-Rinow theorem	126
4.6. Totally geodesic submanifolds	129

Chapter 5. VECTOR BUNDLES ON MANIFOLDS	133
5.1. Vector bundles	133
5.2. Construction of vector bundles	142
5.3. Homotopy property of vector bundles	145
5.4. Subbundle and quotient bundle	148
5.5. Orientation	151
5.6. Reduction of structure group of a vector bundle	157
5.7. Homology characterisation of orientation	159
5.8. Integration of differential forms on manifolds	163
Chapter 6. TRANSVERSALITY	169
6.1. ϵ -neighbourhood of submanifold of Euclidean space	169
6.2. Transversality	173
6.3. Compact one-manifolds and Brouwer's theorem	179
6.4. Boundary and preimage orientations	182
6.5. Intersection numbers, and Degrees of maps	185
6.6. Hopf's degree theorem	191
Chapter 7. TUBULAR NEIGHBOURHOODS	199
7.1. Tubular neighbourhood theorems	199
7.2. Collar neighbourhoods	202
7.3. Isotopy extension theorem	206
7.4. Uniqueness of tubular neighbourhoods	212
7.5. Manifolds with corner and straightening them	216
7.6. Construction of manifolds by gluing process	219
Chapter 8. SPACES OF SMOOTH MAPS	225
8.1. Spaces of Jets	225
8.2. Weak and strong topologies	233
8.3. Continuity of maps between spaces of smooth maps	240
8.4. Spaces of immersions and embeddings	244
8.5. Baire property of the space of smooth maps	248
8.6. Smooth structures on jet spaces	250
8.7. Thom's Transversality Theorem	254
8.8. Multi-jet transversality	260
8.9. More results on Whitney's immersion and embedding	262
Chapter 9. MORSE THEORY	267
9.1. Morse functions	267
9.2. Critical levels and attaching handles	272
9.3. Morse inequalities	286
9.4. Perfect Morse functions	292
9.5. Triangulations of manifolds	294
Chapter 10. THEORY OF HANDLE PRESENTATIONS	299
10.1. Existence of handle presentation	300

10.2.	Duality theorems	305
10.3.	Normalisation of presentation	312
10.4.	Cancellation of handles	314
10.5.	Classification of closed surfaces	319
10.6.	Removal of intersection points	321
10.7.	Addition of handles	330
10.8.	Simplification of handle presentations	334
10.9.	h -cobordism theorem and generalised Poincaré conjecture	337
Bibliography		341
Index		345
