

Contents

1	Introduction	1
	Reference	1
2	Averages and Error Bars	3
2.1	Basic Analysis	3
2.2	Advanced Analysis	9
2.2.1	Traditional Method	10
2.2.2	Jackknife	13
2.2.3	Bootstrap	15
2.2.4	Jackknife or Bootstrap?	19
	References	19
3	Fitting Data to a Model	21
3.1	Fitting to a Straight Line	23
3.2	Fitting to a Polynomial	25
3.3	Error Bars	25
3.4	Interpolating	30
3.5	Fitting to a Non-linear Model	32
3.6	Confidence Limits	32
3.7	Confidence Limits by Resampling the Data	36
3.8	A Tale of Two Probabilities. When Can One Rule Out a Fit? . . .	37
3.9	Model Selection (i.e. How to Avoid Over-Fitting):	
	Maximum Likelihood Versus Bayes	39
3.9.1	Maximum Likelihood	42
3.9.2	A Bayesian Approach.	44
3.9.3	Conclusions for Model Selection	52
	References	53

Appendix A: Central Limit Theorem	55
Appendix B: The Number of Degrees of Freedom	61
Appendix C: The Chi-squared Distribution and the Goodness of Fit Parameter Q	63
Appendix D: Asymptotic Standard Error and How to Get Correct Error Bars from Gnuplot	67
Appendix E: The Distribution of Fitted Parameters Determined from Simulated Datasets	71
Appendix F: The Distribution of Fitted Parameters from Repeated Sets of Measurements	73
Appendix G: Fitting Correlated Data	75
Appendix H: Scripts for Some Data Analysis and Fitting Tasks	77
