Part I Applied Methods of Modern Algebra and Analysis

1	The Absolute Stability of Orthorecursive Expansions in Redundant Systems of Subspaces.	3
	V.V. Galatenko, T.P. Lukashenko and V.A. Sadovnichiy	
1.1	Introduction	3
1.2	Main Results	5
1.3	Proofs	6
	References.	10
2	Topological Classification of Geodesic Flows on Revolution 2-Surfaces with Potential.	11
	A.T. Fomenko and E.O. Kantonistova	
2.1	“Atoms” and Morse Functions	11
2.2	Complicated Atoms and Molecules	15
2.3	Topology of Integrable Hamiltonian Systems with Two Degrees of Freedom	16
2.4	Geodesic Flows with Potential on the Surfaces of Revolution	20
2.5	The Case of Gravitational Potential: Topological Classification	21
2.6	Topological Equivalence Between Different Integrable Systems	24
	References.	26
3	Multiplicative and Additive Problems of Partitions of Natural Numbers	29
	Vladimir Nikolaevich Chubarikov and Gleb Vladimirovich Fedorov	
3.1	Additive Problems	29
3.2	Multiplicative Problems	33
	References.	36

4	Critical Analysis of Amino Acids and Polypeptides Geometry	37
	Alexander O. Ivanov, Alexander S. Mishchenko and Alexey A. Tuzhilin	
4.1	Introduction	38
4.2	Protein Data Bank.	38
4.2.1	Extracting Information from PDB	39
4.2.2	The First Steps in Polypeptides Visualization	40
4.2.3	Some Difficulties in PDB-Files Treatment	43
4.3	Metric Analysis of PDB.	48
4.3.1	Estimation of Spread in Lengths of Covalent Bonds in Amino Acids	48
4.3.2	Spread Estimation of Distances Between Consecutive Alpha Carbons (Beginning)	53
4.3.3	Spread Estimation of the Lengths of Peptide Bonds	54
4.3.4	Pauling Plane Law	55
4.3.5	Spread Estimation of Distances Between Consecutive Alpha Carbons (End).	60
4.3.6	Spread Estimation of Angles Between Covalent Bonds in Polypeptides.	61
4.4	Amino Acids' Mobility	62
4.4.1	Orientation of Amino Acids	64
4.5	Addendum (in collaboration with E. A. Vilkul).	66
4.5.1	The Number of Models' Distribution.	67
4.5.2	"Representativity" of the First Model from the Pathologies Point of View.	69
4.5.3	"Representativity" of the First Model from the Plane Law Point of View	71
4.6	Geometry of Planar and Space Polygonal Lines: Spirals Detecting	74
4.7	Torsion and Curvature of Space Curves.	79
	References.	81
5	On the Riemann's Problem for One Nonstrictly Hyperbolic System	83
	V.V. Palin and E.V. Radkevich	
5.1	Setting up the Problem	83
5.2	Algebraical Deduction	84
5.2.1	Critical Manifold Σ_+ : Condition of Jordanity.	84

5.3	The Form of One- and Two-Front Solutions of Regularized System.	85
5.3.1	Stabilization Conditions: The Choice of Parameters of Problem	85
5.3.2	ODE System for One-Front Equation: Rankine–Hugoniot Conditions	86
5.3.3	The ODE System for Two-Front Solution	86
5.3.4	Rankine–Hugoniot Conditions	87
5.3.5	Lax’s Condition : One-Front Solution	87
5.3.6	Lax’s Condition for Two-Front Solution: Condition of Monotonicity.	88
5.4	Shock Waves in a Small Neighborhood of Σ_+ : Condition for Speed ω	89
5.4.1	The Existence of One-Front Solution then Moving in the Noncritical Eigenvector Direction	89
5.4.2	One-Front Solution as the Traveling Wave for $\omega = \lambda_+ _{q=0}$	90
5.5	The Existence of Two-Front Solutions as $\omega = \lambda_+ _{q=0}$	91
5.5.1	Different Forms of Two-Front Solutions	94
5.5.2	The Evident Appearance of b_+ : The Conditions for Two-Front Solutions Type in the Terms of Front Speed	95
5.5.3	The Conditions for Two-Front Solutions of Humped Kink Type in the ω Terms	95
5.5.4	The Conditions for Two-Front Solutions of Shelf Type in the ω Terms.	96
5.6	Bifurcation of Rarefaction Waves on the Critical Manifold Σ_+	96
5.6.1	The Two-Front Analogue of the Rarefaction Wave: rs -Type	97
5.6.2	The Proof of the Existence of rs -Type Solution	97
5.6.3	The Two-Front Analogue of Rarefaction Wave: sr -Type	98
	References.	98

Part II Non-autonomous and Stochastic Dynamical Systems

6	Dynamics of Nonautonomous Chemostat Models	103
	Tomás Caraballo, Xiaoying Han, Peter E. Kloeden and Alain Rapaport	
6.1	Introduction	104
6.2	Preliminaries on Nonautonomous Dynamical Systems	105

6.3	Properties of Solutions.	107
6.4	Pullback Attractors for Nonautonomous Chemostat Models . . .	110
6.4.1	Chemostats with Wall Growth, Variable Delays, and Fixed Inputs.	110
6.4.2	Chemostat with Wall Growth, Variable Inputs, and No Delays	111
6.4.3	Chemostat with No Wall Growth or Delays	115
6.5	Random Chemostat Models	116
6.6	Overyield in Nonautonomous Chemostats	117
	References.	119
7	Asymptotic Dynamics of Stochastic Lattice Differential Equations:	
	A Review	121
	Xiaoying Han	
7.1	Introduction	121
7.2	Preliminaries on Random Dynamical Systems	122
7.3	Random Attractors for Stochastic Differential Equations	125
7.3.1	Mathematical Settings	125
7.3.2	Selected Results for First-Order SLDEs	127
7.3.3	A Brief on Second-Order SLDEs	131
7.3.4	Mathematical Setting.	132
7.3.5	Existence of Random Attractors	133
7.4	Closing Remarks	134
	References.	135
8	A Generalized Cahn-Hilliard Equation	
	with Logarithmic Potentials.	137
	Alain Miranville	
8.1	Introduction	137
8.2	Setting of the Problem.	139
8.3	A Priori Estimates.	141
8.4	The Continuous Semigroup	144
	References.	147
9	Attractors for Multivalued Processes with Weak	
	Continuity Properties	149
	Piotr Kalita and Grzegorz Łukaszewicz	
9.1	Introduction	149
9.2	Abstract Theory of Pullback \mathcal{D} -Attractors for Multivalued Processes	150
9.3	Application	156
	References.	165

10 Lévy–Areas of Ornstein–Uhlenbeck Processes in Hilbert–Spaces	167
María J. Garrido-Atienza, Kening Lu and Björn Schmalfuß	
10.1 Introduction	167
10.2 The Construction of $(\omega \otimes_S \omega)$ for a Fractional Brownian motion	171
10.3 The Construction of $(\omega \otimes_S \omega)$ for a Brownian motion	176
10.4 Additional Properties of $(\omega \otimes_S \omega)$	185
References.	187
11 Periodic and Almost Periodic Random Inertial Manifolds for Non-Autonomous Stochastic Equations.	189
B. Wang	
11.1 Introduction	189
11.2 Notation	190
11.3 Existence of Random Inertial Manifolds	192
11.4 Periodicity and Almost Periodicity of Inertial Manifolds	206
References.	208
12 Some Properties for Exact Generalized Processes.	209
Jacson Simsen and Érika Capelato	
12.1 Introduction	209
12.2 Notations, Definitions, and Some Properties on the Multivalued Process	210
12.3 Pullback Attraction and Properties on ω -limit Sets	213
12.4 Final Remarks	218
References.	218
13 Uniform Trajectory Attractors for Nonautonomous Dissipative Dynamical Systems	221
Mikhail Z. Zgurovsky and Pavlo O. Kasyanov	
13.1 Introduction and Setting of the Problem.	221
13.2 Preliminary Properties of Weak Solutions	224
13.3 Uniform Trajectory Attractor and Main Result	226
13.4 Proof of Theorem 13.1	228
13.5 Conclusions	231
References.	231
14 Lyapunov Functions for Differential Inclusions and Applications in Physics, Biology, and Climatology	233
Mark O. Gluzman, Nataliaia V. Gorban and Pavlo O. Kasyanov	
14.1 Introduction and Regularity of All Weak Solutions	233
14.2 A Lyapunov Type Function and Strongest Convergence Results for All Weak Solutions.	235

14.3	Structure Properties and Regularity of Global and Trajectory Attractors	238
14.4	Faedo–Galerkin Approximation for the Global and Trajectory Attractors	239
14.5	Applications	240
	References	241
 Part III Optimization, Control and Decision Sciences for Continuum Mechanics Problems		
15	Robust Stability, Minimax Stabilization and Maximin Testing in Problems of Semi-Automatic Control	247
	Victor A. Sadovnichiy, Vladimir V. Alexandrov, Stephan S. Lemak, Dmitry I. Bugrov, Katerina V. Tikhonova and Raul Temoltzi Avila	
15.1	Introduction	248
15.2	Robust Stability of Linear Systems	248
15.3	Minimax Stabilization and Antagonistic Game	255
15.4	Maximin Testing of Quality of Control Algorithm	260
	15.4.1 Program Strategy of Testing	261
	15.4.2 Closed-Loop Strategy of Testing	262
15.5	Conclusions	264
	References	265
 16	 Dynamics of Solutions for Controlled Piezoelectric Fields with Multivalued “Reaction-Displacement” Law	 267
	Mikhail Z. Zgurovsky, Pavlo O. Kasyanov, Liliia S. Paliichuk and Alla M. Tkachuk	
16.1	Introduction and the Main Problem	268
16.2	Setting of the Problem and the Main Results	269
	References	275
 17	 Minimax Estimates for Solutions of Parabolic-Hyperbolic Equations with Nonlocal Boundary Conditions	 277
	V.O. Kapustyan and I.O. Pyshnograiev	
17.1	Introduction	277
17.2	The Problem with Distributed Observation	278
	17.2.1 Problem Statement	278
	17.2.2 Formal Solution of the Problem	279
17.3	The Problem with Divided Observation	288
	17.3.1 Problem Statement	288
	17.3.2 Formal Solution of the Problem	289
	References	296

18	The Optimal Control Problem for Parabolic Equation with Nonlocal Boundary Conditions in Circular Sector.	297
	V.O. Kapustyan, O.A. Kapustian, O.V. Kapustyan and O.K. Mazur	
18.1	Introduction	297
18.2	Setting of the Problem.	298
18.3	Some Facts from the Theory of Fourier-Bessel Series	300
18.4	Existence of Classical Solution of the Problem (18.1) with Fixed Control	303
18.5	The Optimal Control Problem (18.1) and (18.2)	311
18.6	Conclusions	314
	References.	314
19	On the Existence of Weak Optimal Controls in the Coefficients for a Degenerate Anisotropic p-Laplacian	315
	Olha P. Kупenko and Günter Leugering	
19.1	Introduction	315
19.2	Notation and Preliminaries	317
19.3	\mathbb{S}^N -Valued Radon Measures and Weak Convergence in Variable L^p -Spaces	320
19.4	Auxiliary Results	327
19.5	Setting of the Optimal Control Problem.	330
19.6	Existence of Weak Optimal Solutions	333
	References.	336

Part IV Fundamental and Computational Mechanics

20	Uniform Approach to Construction of Nonisothermal Models in the Theory of Constitutive Relations	341
	B.E. Pobedria and D.V. Georgievskii	
20.1	Postulates of Continuum Mechanics	341
20.2	Ideal Liquid and Gas.	342
20.3	Newtonian Viscous Fluid.	345
20.4	Linear Anisotropic Elastic Solid	347
	References.	352
21	Active Near-Wall Flow Control via a Cross Groove with Suction	353
	I.M. Gorban and O.V. Khomenko	
21.1	Introduction	353
21.2	Mathematical Formulation of the Problem	355
21.3	Standing Vortex Within the Groove in the Stationary Flow	358
21.4	Standing Vortex in the Groove in Periodically Perturbed Flow.	363

21.5	Summary	366
	References.	367
22	A Numerical Study of Solitary Wave Interactions with a Bottom Step.	369
	I.M. Gorban	
22.1	Introduction	369
22.2	Problem Statement	371
22.3	Numerical Method	373
	22.3.1 General Principles.	373
	22.3.2 Free-Surface Modeling	374
	22.3.3 The Vortex Method for 2-D Flows	378
22.4	Results and Discussion.	379
22.5	Conclusions	385
	References.	386

Continuous and Distributed Systems II

Theory and Applications

Sadovnichiy, V.A.; Zgurovsky, M. (Eds.)

2015, XXIII, 387 p. 90 illus., 50 illus. in color., Hardcover

ISBN: 978-3-319-19074-7
