

Contents

1	Motivation	1
	References.	3
2	Introduction and Theory	5
2.1	The Governing Equations	5
2.1.1	The Navier-Stokes Equations	6
2.1.2	Statistical Description of Turbulence	7
2.2	Kolmogorov’s Theory (1941)	8
2.3	Turbulent Dispersion.	11
2.3.1	Eulerian and Lagrangian Descriptions of Turbulence	11
2.3.2	Pair Dispersion.	11
2.3.3	Backward Dispersion.	14
2.3.4	Multi-particle Dispersion	15
	References.	18
3	Experimental Methods	21
3.1	Lagrangian Particle Tracking	21
3.1.1	Particle Center Finding	22
3.1.2	Calibration.	25
3.1.3	3D Matching	27
3.1.4	Particle Tracking	28
3.2	Velocity and Acceleration Computation	30
3.3	Experimental Setup	34
3.3.1	Hardware.	34
3.3.2	Data Collection	36
3.3.3	Calibration.	37
3.4	Datasets.	38
3.5	Measurement Uncertainties.	41
	References.	46

4	Two-Particle Dispersion	47
4.1	Short-Time Expansion	47
4.2	Data Analysis	49
4.3	Experimental Results	50
	References	57
5	Four-Particle Dispersion	59
5.1	Short-Time Expansion	59
5.2	Data Analysis	64
5.3	Experimental Results	65
	References	72
6	The Effect of Polymers	73
6.1	Preparation of the Experiment	73
6.2	Effect of Polymers on the Energy Cascade	76
6.3	Two-Particle Dispersion	80
6.4	Four-Particle Dispersion	82
	References	85
7	Discussion and Perspectives	87
	References	90
	Appendix A: Supplementary Figures and Derivations	91
	Appendix B: Flow Properties	99
	Appendix C: Data Formats	105
	Curriculum Vitae	111

Time-Symmetry Breaking in Turbulent Multi-Particle
Dispersion

Jucha, J.

2015, XII, 113 p. 42 illus., 22 illus. in color., Hardcover

ISBN: 978-3-319-19191-1
