1	Introduction	1
1.1	DGM Versus Finite Volume and Finite Element Methods	2
1.2	A Short Historical Overview of the DGM	5
1.2.1	DGM for Hyperbolic and Singularly Perturbed Problems	5
1.2.2	DGM for Elliptic and Parabolic Problems	6
1.2.3	DGM for the Numerical Solution of Compressible Flow	8
1.2.4	Monographs Dealing with the DGM	9
1.3	Some Mathematical Concepts	9
1.3.1	Spaces of Continuous Functions	10
1.3.2	Lebesgue Spaces	11
1.3.3	Sobolev Spaces	12
1.3.4	Theorems on Traces and Embeddings	13
1.3.5	Bochner Spaces	16
1.3.6	Useful Theorems and Inequalities	19

Part I Analysis of the Discontinuous Galerkin Method

2	DGM for Elliptic Problems	27
2.1	Model Problem	27
2.2	Abstract Numerical Method and Its Theoretical Analysis	28
2.3	Spaces of Discontinuous Functions	31
2.3.1	Partition of the Domain	31
2.3.2	Assumptions on Meshes	33
2.3.3	Broken Sobolev Spaces	35
2.4	DGM Based on a Primal Formulation	37

2.5	Basic Tools of the Theoretical Analysis of DGM	43
2.5.1	Multiplicative Trace Inequality	46
2.5.2	Inverse Inequality	48
2.5.3	Approximation Properties	49
2.6	Existence and Uniqueness of the Approximate Solution	51
2.6.1	The Choice of Penalty Weight σ	52
2.6.2	Continuity of Diffusion Bilinear Forms	53
2.6.3	Coercivity of Diffusion Bilinear Forms	59
2.7	Error Estimates	61
2.7.1	Estimates in the DG-Norm	61
2.7.2	Optimal $L^2(\Omega)$ -Error Estimate	64
2.8	Baumann–Oden Method	68
2.9	Numerical Examples	72
2.9.1	Regular Solution	72
2.9.2	Singular Case	77
2.9.3	A Note on the $L^2(\Omega)$ -Optimality of NIPG and IIPG	78
3	Methods Based on a Mixed Formulation	85
3.1	A General Mixed DG Method	85
3.1.1	Equivalent Formulations	87
3.1.2	Lifting Operators	88
3.2	Bassi–Rebay Methods	90
3.2.1	Mixed Formulation	90
3.2.2	Variational Formulation	91
3.2.3	Theoretical Analysis	95
3.3	Local Discontinuous Galerkin Method	104
3.3.1	Mixed Formulation	105
3.3.2	Variational Formulation	108
3.3.3	Theoretical Analysis	110
4	DGM for Convection-Diffusion Problems	117
4.1	Scalar Nonlinear Nonstationary Convection-Diffusion Equation	117
4.2	Discretization	120
4.3	Abstract Error Estimate	124
4.3.1	Consistency of the Convection Form in the Case of the Dirichlet Boundary Condition	125
4.3.2	Consistency of the Convective Form in the Case of Mixed Boundary Conditions	128
4.3.3	Error Estimates for the Method of Lines	134
4.4	Error Estimates in Terms of h	138
4.5	Optimal $L^\infty(0, T; L^2(\Omega))$ -Error Estimate	142

4.6	Uniform Error Estimates with Respect to the Diffusion Coefficient	151
4.6.1	Continuous Problem	151
4.6.2	Discretization of the Problem	153
4.6.3	Error Estimates	157
4.7	Numerical Examples	166
5	Space-Time Discretization by Multistep Methods	171
5.1	Semi-implicit Backward Euler Time Discretization	171
5.1.1	Discretization of the Problem	172
5.1.2	Error Estimates	173
5.2	Backward Difference Formula for the Time Discretization	183
5.2.1	Discretization of the Problem	184
5.2.2	Theoretical Analysis	188
5.2.3	Error Estimates	198
5.2.4	Numerical Examples	221
6	Space-Time Discontinuous Galerkin Method	223
6.1	Space-Time DGM for a Heat Equation	223
6.1.1	Discretization of the Problem	224
6.1.2	Space-Time DG Discretization	226
6.1.3	Auxiliary Results	229
6.1.4	Space-Time Projection Operator	231
6.1.5	Abstract Error Estimate	241
6.1.6	Estimation of Projection Error in Terms of h and τ	245
6.1.7	Error Estimate in the DG-norm	253
6.1.8	Discrete Characteristic Function	255
6.1.9	Error Estimate in the $L^\infty(0, T; L^2(\Omega))$ -norm	261
6.1.10	The Case of Identical Meshes on All Time Levels	264
6.1.11	Alternative Proof of Lemma 6.12	264
6.2	Space-Time DGM for Nonlinear Convection-Diffusion Problems	267
6.2.1	Discretization of the Problem	268
6.2.2	Auxiliary Results	270
6.2.3	Abstract Error Estimate	279
6.2.4	Main Result	289
6.2.5	Numerical Examples	292
6.3	Extrapolated Space-Time Discontinuous Galerkin Method for Nonlinear Convection-Diffusion Problems	293
6.3.1	Discretization of the Problem	294
6.3.2	Auxiliary Results	297

6.3.3	Error Estimates	304
6.3.4	Numerical Examples	311
6.4	Uniform Error Estimates with Respect to the Diffusion Coefficient for the ST-DGM.	317
6.4.1	Formulation of the Problem and Some Assumptions.	319
6.4.2	Discretization of the Problem	319
6.4.3	Properties of the Discrete Problem	322
6.4.4	Abstract Error Estimate	323
6.4.5	Numerical Examples	332
7	Generalization of the DGM	337
7.1	<i>hp</i> -Discontinuous Galerkin Method	337
7.1.1	Formulation of a Model Problem	338
7.1.2	Discretization	338
7.1.3	Theoretical Analysis	342
7.1.4	Computational Performance of the <i>hp</i> -DGM.	352
7.2	DGM on General Elements	361
7.2.1	Assumptions on the Domain Partition	362
7.2.2	Function Spaces	363
7.2.3	Approximate Solution	364
7.2.4	Auxiliary Results	365
7.2.5	Error Analysis	370
7.2.6	Numerical Examples	370
7.3	The Effect of Numerical Integration	374
7.3.1	Continuous Problem	374
7.3.2	Space Semidiscretization	375
7.3.3	Numerical Integration	376
7.3.4	Some Important Results.	377
7.3.5	Truncation Error of Quadrature Formulae.	379
7.3.6	Properties of the Convection Forms.	383
7.3.7	The Effect of Numerical Integration in the Convection Form.	387
7.3.8	Error Estimates for the Method of Lines with Numerical Integration.	392

Part II Applications of the Discontinuous Galerkin Method

8	Inviscid Compressible Flow	401
8.1	Formulation of the Inviscid Flow Problem	402
8.1.1	Governing Equations	402
8.1.2	Initial and Boundary Conditions	408

8.2	DG Space Semidiscretization	409
8.2.1	Notation.	409
8.2.2	Discontinuous Galerkin Space Semidiscretization	411
8.3	Numerical Treatment of Boundary Conditions	413
8.3.1	Boundary Conditions on Impermeable Walls	413
8.3.2	Boundary Conditions on the Inlet and Outlet	416
8.4	Time Discretization	423
8.4.1	Backward Euler Method	424
8.4.2	Newton Method Based on the Jacobi Matrix	425
8.4.3	Newton-Like Method Based on the Flux Matrix	426
8.4.4	Realization of the Iterative Algorithm	432
8.4.5	Higher-Order Time Discretization	434
8.4.6	Choice of the Time Step	439
8.4.7	Structure of the Flux Matrix	441
8.4.8	Construction of the Basis in the Space S_{hp}	443
8.4.9	Steady-State Solution.	445
8.5	Shock Capturing	447
8.5.1	Jump Indicators	448
8.5.2	Artificial Viscosity Shock Capturing	449
8.5.3	Numerical Examples	451
8.6	Approximation of a Nonpolygonal Boundary	456
8.6.1	Curved Elements.	456
8.6.2	DGM Over Curved Elements	458
8.6.3	Numerical Examples	463
8.7	Numerical Verification of the BDF-DGM.	467
8.7.1	Inviscid Low Mach Number Flow.	467
8.7.2	Low Mach Number Flow at Incompressible Limit.	469
8.7.3	Isentropic Vortex Propagation.	472
8.7.4	Supersonic Flow	474
9	Viscous Compressible Flow	477
9.1	Formulation of the Viscous Compressible Flow Problem	477
9.1.1	Governing Equations	477
9.1.2	Initial and Boundary Conditions	483
9.2	DG Space Semidiscretization	485
9.2.1	Notation.	485
9.2.2	DG Space Semidiscretization of Viscous Terms	486
9.2.3	Semidiscrete Problem	491
9.3	Time Discretization	492
9.3.1	Time Discretization Schemes	492
9.3.2	Solution Strategy.	493

9.4	Numerical Examples	497
9.4.1	Blasius Problem	498
9.4.2	Stationary Flow Around the NACA 0012 Profile	504
9.4.3	Unsteady Flow	510
9.4.4	Steady Versus Unsteady Flow.	512
9.4.5	Viscous Shock-Vortex Interaction	514
10	Fluid-Structure Interaction	521
10.1	Formulation of Flow in a Time-Dependent Domain.	521
10.1.1	Space Discretization of the Flow Problem	523
10.1.2	Time Discretization by the BDF Method	528
10.1.3	Space-Time DG Discretization	530
10.2	Fluid-Structure Interaction	531
10.2.1	Flow-Induced Airfoil Vibrations	531
10.2.2	Interaction of Compressible Flow and an Elastic Body	537
	References.	553
