<b>From Spin Glasses to Branching Brownian Motion—and Back? .....</b>	<b>1</b>
Anton Bovier	
1 Introduction .....	1
2 Spin Glasses .....	2
2.1 Setting and Examples .....	2
2.2 Classical Extreme Value Theory, Aka the REM .....	4
2.3 Rough Estimates, the Second Moment Method .....	4
2.4 The GREM, Two Levels .....	8
3 Branching Brownian Motion .....	13
3.1 Definition and Basics .....	13
3.2 The F-KPP Equation .....	15
3.3 The Travelling Wave .....	16
3.4 The Derivative Martingale .....	20
4 The Extremal Process of BBM .....	25
4.1 Controlling Solutions of the F-KPP Equation .....	25
4.2 Existence of a Limiting Process .....	34
4.3 Flash Back to the Derivative Martingale .....	37
4.4 A Representation for the Laplace Functional .....	38
4.5 Interpretation as Cluster Point Process .....	41
5 Variable Speed BBM .....	50
References .....	62
<b>The Renormalization Group and Self-avoiding Walk .....</b>	<b>65</b>
David Brydges	
1 Introduction .....	65
2 The Lattice Edwards Model .....	68
3 The Free Field and Local Time .....	71
4 The Free Field, Local Time and Differential Forms .....	74
4.1 Review of Differential Forms .....	74
4.2 Gaussian Integrals in Terms of Forms .....	77
4.3 The Local Time Isomorphism and Forms .....	79

5	Susceptibility as a Gaussian Integral .....	80
5.1	The Most General Split into Gaussian Plus Perturbation .....	81
5.2	The Proof of Theorem 2.2 .....	83
5.3	The Susceptibility in Terms of Super-Convolution .....	85
6	The Renormalisation Group .....	88
6.1	Progressive Integration .....	90
6.2	First Order Perturbation Theory .....	90
6.3	Second Order Perturbation Theory .....	92
6.4	The Error Coordinate .....	94
7	The Norm of the Error Coordinate .....	101
7.1	The $\mathcal{F}$ Norm .....	101
7.2	The Irrelevant Parts of $K_+$ .....	103
7.3	The Complete Recursion .....	108
8	Outline of Proof of Theorem 5.2 .....	110
8.1	Construction of $z_0^c, \nu_0^c$ .....	110
8.2	Coupling Constants at Large Scales .....	111
8.3	Proof of (73) .....	112
8.4	Proof of (74) .....	113
	References .....	114
	<b>Phase Transitions in Discrete Structures</b> .....	117
	Amin Coja-Oghlan	
1	Introduction .....	117
2	The Cavity Method .....	118
2.1	Basic Concepts .....	118
2.2	Belief Propagation .....	120
2.3	Disordered Systems .....	123
2.4	The Replica Symmetric Ansatz .....	125
2.5	Replica Symmetry Breaking .....	128
3	Classical Rigorous Results .....	132
3.1	Basics .....	132
3.2	The “Vanilla” Second Moment Method .....	134
4	A Physics-Enhanced Rigorous Approach .....	137
4.1	Quiet Planting .....	138
4.2	Condensation .....	140
4.3	The Asymptotic 2-Colorability Threshold .....	142
5	Conclusions and Outlook .....	144
	References .....	145
	<b>Multidimensional Random Polymers: A Renewal Approach</b> .....	147
	Dmitry Ioffe	
1	Introduction .....	147
1.1	Class of Models .....	148
1.2	Morphology .....	149

2	Thermodynamics of Annealed and Quenched Models .....	153
2.1	Annealed Models in Dimensions $d \geq 2$ .....	154
2.2	Thermodynamics of Quenched Polymers .....	163
3	Multidimensional Renewal Theory and Annealed Polymers .....	165
3.1	Multi-Dimensional Renewal Theory .....	165
3.2	Ballistic Phase of Annealed Polymers .....	174
4	Very Weak Disorder in $d \geq 4$ .....	185
5	Strong Disorder .....	194
	References .....	209
	<b>Loop Measures and the Gaussian Free Field</b> .....	211
	Gregory F. Lawler and Jacob Perlman	
1	Introduction .....	211
2	Definitions .....	212
3	Loop Measures .....	215
3.1	Definition .....	215
3.2	Relation to Loop-Erased Walk .....	218
4	Loop Soup and Gaussian Free Field .....	220
4.1	Soups .....	220
4.2	Loop Soup .....	221
4.3	A Continuous Occupation Field .....	223
4.4	Trivial Loops .....	227
4.5	Relation to the Real Gaussian Free Field .....	229
4.6	Complex Weights .....	230
	References .....	235
	<b>Index</b> .....	237

Random Walks, Random Fields, and Disordered  
Systems

Bovier, A.; Brydges, D.; Coja-Oghlan, A.; Ioffe, D.; Lawler,  
G.F. - Biskup, M.; Černý, J.; Kotecky, R. (Eds.)

2015, XIII, 239 p. 14 illus., 3 illus. in color., Softcover

ISBN: 978-3-319-19338-0
