1	Introduction	1
1.1	What Is Fundamental About This Work?	1
1.2	What Are Polymer Blend Thin Films?	1
1.3	Outline of This Thesis	5
2	Development of Theory for Bulk Polymer Blend Systems	7
2.1	Introduction	7
2.2	Entropy of Mixing	8
2.2.1	Entropy of Ideal Solutions	8
2.2.2	Entropy of Polymer Solutions	10
2.3	Heat of Mixing	12
2.3.1	Activities Data	12
2.3.2	A van Laar Form for the Heat of Mixing	14
2.3.3	The Flory-Huggins Interaction Parameter	15
2.4	Flory-Huggins Free Energy of Mixing	18
2.5	Flory-Huggins-de Gennes Free Energy	20
2.5.1	Free Energy of Non-uniform Systems	20
2.5.2	Random Phase Approximation for Polymer Chains	21
2.5.3	The Flory-Huggins-de Gennes Free Energy	23
2.6	Spinodal Decomposition	25
2.6.1	A Crystal with a 1D Inhomogeneity	25
2.6.2	Stability of a Solution	27
2.6.3	Diffusion Equation	28
2.6.4	Morphology from Spinodal Decomposition	29
2.6.5	Random Noise and Spinodal Decomposition	30
2.6.6	Spinodal Decomposition of a Polymer Blend	32
2.7	Summary	33
	References	33

3	Development of Theory for Polymer-Blend Thin Films	35
3.1	Introduction	35
3.2	Non-uniform Systems with a Surface.	36
3.3	Form of the Surface Energy	37
3.3.1	Magnetic Systems.	38
3.3.2	Simple Fluid Systems	39
3.3.3	Polymer Systems	40
3.4	Wetting in Semi-infinite Geometries	42
3.4.1	Wetting in a Three Phase System	42
3.4.2	Ising Systems with a Wall	44
3.4.3	Wetting in Polymer Systems	44
3.5	Phase Separation in Finite Geometries	46
3.5.1	Laterally Coexisting Film Profiles.	46
3.5.2	Symmetric Confinement	48
3.5.3	Antisymmetric Confinement.	50
3.5.4	Asymmetric Confinement.	51
3.6	Summary	52
	References.	52
4	Hamiltonian Phase Portraits for Polymer-Blend Thin Films	55
4.1	Introduction	55
4.1.1	Equilibria of Polymer-Blend Thin Films	56
4.1.2	Phase Space, Trajectories, and Phase Portraits	57
4.1.3	Previous Work	57
4.1.4	Asymmetric Films: A More Difficult Problem	58
4.2	Phase Equilibria	59
4.2.1	Free Energy Functional	59
4.2.2	Euler-Lagrange Equation	60
4.2.3	Surface Boundary Conditions	61
4.2.4	Material Constraints	61
4.3	Hamiltonian Phase Portraits	62
4.3.1	Hamiltonian Formulation with Constraints	62
4.3.2	Generating Hamiltonian Phase Portraits	63
4.3.3	Calculation of Equilibria	64
4.3.4	Description of Phase Portraits.	65
4.4	Phase Equilibria of Asymmetric Films.	70
4.4.1	Independently-Existing Profiles.	71
4.4.2	Coexisting Solutions	76
4.5	Surface Roughening	79
4.6	Summary	81
	References.	81

5	Lateral Phase Separation via Surface Bifurcation	83
5.1	Introduction	83
5.1.1	The Importance of Dynamics and Kinetics	84
5.1.2	Lateral Phase Separation via a Transient Wetting Layer	85
5.2	Calculating Phase Equilibria in 1D	86
5.2.1	1D Description of Polymer-Blend Film	87
5.2.2	The Chemical Potential	88
5.2.3	Solving for 1D Equilibria	89
5.3	Modelling Phase Separation	89
5.3.1	The Local Chemical Potential	90
5.3.2	The Diffusion Equation	92
5.3.3	Parameters	95
5.4	1D Equilibria in 2D Films	95
5.4.1	Vertically Segregated Films	96
5.4.2	Pinning of Profiles at the Walls	99
5.4.3	Laterally Segregated Films	99
5.5	Breakup of a Transient Wetting Layer	103
5.5.1	One Surface Field	106
5.5.2	Two Surface Fields	110
5.5.3	Bypassing the Wetting Layer	113
5.6	Discussion	115
5.6.1	Random Noise	115
5.6.2	Solvent Evaporation	116
5.7	Summary	117
	References	118
