

Contents

1	Introduction	1
1.1	Physics	1
1.2	Mechanics	2
1.3	Integrating Numerical Methods	3
1.4	Problems and Exercises	4
1.5	How to Learn Physics	5
1.6	How to Use This Book	7
2	Getting Started with Programming	9
2.1	A Matlab Calculator	9
2.2	Scripts and Functions	11
2.3	Plotting Data-Sets	13
2.4	Plotting a Function	14
2.5	Random Numbers	19
2.6	Conditions	20
2.7	Reading Real Data	21
2.7.1	Example: Plot of Function and Derivative	22
3	Units and Measurement	31
3.1	Standardized Units	31
3.2	Changing Units	34
3.3	Uncertainty and Significant Digits	34
3.4	Numerical Representation	36
4	Motion in One Dimension	43
4.1	Description of Motion	44
4.1.1	Example: Motion of a Falling Tennis Ball	50
4.2	Calculation of Motion	58
4.2.1	Example: Modeling the Motion of a Falling Tennis Ball	64

5	Forces in One Dimension	83
5.1	What Is a Force?	83
5.2	Identifying Forces	86
5.3	Newton's Second Law of Motion	88
5.3.1	Example: Acceleration and Forces on a Lunar Lander	90
5.4	Force Models	93
5.5	Force Model: Gravitational Force	94
5.6	Force Model: Viscous Force	96
5.6.1	Example: Falling Raindrops	99
5.7	Force Model: Spring Force	103
5.7.1	Example: Motion of a Hanging Block	112
5.8	Newton's First Law	119
5.9	Newton's Third Law	119
5.9.1	Example: Weight in an Elevator	123
6	Motion in Two and Three Dimensions	139
6.1	Vectors	139
6.2	Description of Motion	146
6.2.1	Example: Mars Express	153
6.3	Calculation of Motion	160
6.3.1	Example: Feather in the Wind	168
6.4	Frames of Reference	171
6.4.1	Example: Motion of a Boat on a Flowing River	173
7	Forces in Two and Three Dimensions	183
7.1	Identifying Forces	183
7.2	Newton's Second Law	187
7.3	Force Model—Constant Gravity	189
7.3.1	Example: Motion of a Ball with Gravity	190
7.4	Force Model—Viscous Force	192
7.4.1	Example: Path Through a Tornado	194
7.5	Force Model—Spring Force	197
7.5.1	Example: Motion of a Bouncing Ball with Air Resistance	201
7.6	Force Model—Central Force	204
7.6.1	Example: Comet Trajectory	205
8	Constrained Motion	215
8.1	Linear Motion	216
8.2	Curved Motion	217
8.2.1	Example: Acceleration of a Matchbox Car	221
8.2.2	Example: Acceleration of a Rotating Rod	222
8.2.3	Example: Normal Acceleration in Circular Motion	223

9	Forces and Constrained Motion	229
9.1	Linear Constraints	231
9.1.1	Example: A Bead in the Wind.	236
9.2	Force Model—Friction	238
9.2.1	Example: Static Friction Forces	242
9.2.2	Example: Dynamic Friction of a Block Sliding up a Hill.	244
9.2.3	Example: Oscillations During an Earthquake	245
9.3	Circular Motion.	249
9.3.1	Example: A Car Driving Through a Curve	252
9.3.2	Example: Pendulum with Air Resistance.	254
10	Work	269
10.1	Integration Methods	269
10.2	Work-Energy Theorem.	272
10.3	Work Done by One-Dimensional Force Models	275
10.3.1	Example: Jumping from the Roof	281
10.3.2	Example: Stopping in a Cushion	285
10.4	Work Done in Two- and Three-Dimensional Motions	290
10.4.1	Example: Work of Gravity	292
10.4.2	Example: Roller-Coaster Motion	293
10.4.3	Example: Work on a Block Sliding Down a Plane.	294
10.5	Power	296
10.5.1	Example: Power Exerted When Climbing the Stairs	297
10.5.2	Example: Power of Small Bacterium	297
11	Energy	303
11.1	Motivating Examples	304
11.2	Potential Energy in One Dimension.	309
11.2.1	Example: Falling Faster	315
11.2.2	Example: Roller-Coaster Motion	316
11.2.3	Example: Pendulum	317
11.2.4	Example: Spring Cannon	319
11.3	Energy Diagrams.	321
11.3.1	Example: Energy Diagram for the Vertical Bow-Shot	328
11.3.2	Example: Atomic Motion Along a Surface	330
11.4	The Energy Principle	333
11.4.1	Example: Lift and Release	334
11.4.2	Example: Sliding Block	335

11.5	Potential Energy in Three Dimensions	337
11.5.1	Example: Constant Gravity in Three Dimensions	338
11.5.2	Example: Gravity in Three Dimensions	339
11.5.3	Example: Non-conservative Force Field	340
11.6	Energy Conservation as a Test of Numerical Solutions.	342
12	Momentum, Impulse, and Collisions	351
12.1	Motivating Example—Meteor Impact.	352
12.2	Translational Momentum	355
12.3	Impulse and Change in Momentum	356
12.3.1	Example: Ball Colliding with Wall	358
12.3.2	Example: Hitting a Tennis Ball	361
12.4	Isolated Systems and Conservation of Momentum	363
12.5	Collisions	369
12.5.1	Example: Ballistic Pendulum.	378
12.5.2	Example: Super-Ball	380
12.6	Modeling and Visualization of Collisions	384
12.7	Rocket Equation	387
12.7.1	Example: Adding Mass to a Railway Car	390
12.7.2	Example: Rocket with Diminishing Mass	390
13	Multiparticle Systems	401
13.1	Motion of a Multiparticle System	402
13.2	The Center of Mass	404
13.2.1	Example: Points on a Line	407
13.2.2	Example: Center of Mass of Object with Hole.	407
13.2.3	Example: Center of Mass by Integration	408
13.2.4	Example: Center of Mass from Image Analysis	410
13.3	Newton's Second Law for Particle Systems	412
13.3.1	Example: Ballistic Motion with an Explosion	413
13.4	Motion in the Center of Mass System	416
13.5	Energy Partitioning	418
13.5.1	Example: Bouncing Dumbbell.	423
13.6	Energy Principle for Multi-particle Systems	429
14	Rotational Motion.	437
14.1	Rotational State—Angle of Rotation	437
14.2	Angular Velocity.	441
14.3	Angular Acceleration	444
14.3.1	Example: Oscillating Antenna	444
14.4	Comparing Linear and Rotational Motion.	445
14.5	Solving for the Rotational Motion	446
14.5.1	Example: Revolutions of an Accelerating Disc	448
14.5.2	Example: Angular Velocities of Two Objects in Contact.	449

14.6	Rotational Motion in Three Dimensions	450
14.6.1	Example: Velocity and Acceleration of a Conical Pendulum	452
15	Rotation of Rigid Bodies	457
15.1	Rigid Bodies	458
15.2	Kinetic Energy of a Rotating Rigid Body	458
15.3	Calculating the Moment of Inertia	462
15.3.1	Example: Moment of Inertia of Two-Particle System	467
15.3.2	Example: Moment of Inertia of a Plate	468
15.4	Conservation of Energy for Rigid Bodies	469
15.4.1	Example: Rotating Rod	472
15.5	Relating Rotational and Translational Motion	475
15.5.1	Example: Weight and Spinning Wheel	477
15.5.2	Example: Rolling Down a Hill	480
16	Dynamics of Rigid Bodies	489
16.1	Motivating Example—Spinning a Wheel	489
16.2	Newton’s Second Law for Rotational Motion	494
16.2.1	Example: Torque and Vector Decomposition	498
16.2.2	Example: Pulling at a Wheel	499
16.2.3	Example: Blowing at a Pendulum	500
16.3	Rotational Motion Around a Moving Center of Mass	505
16.3.1	Example: Kicking a Ball	507
16.3.2	Example: Rolling Down an Inclined Plane	511
16.3.3	Example: Bouncing Rod	514
16.4	Collisions and Conservation Laws	518
16.4.1	Example: Block on a Frictionless Table	521
16.4.2	Example: Changing Your Angular Velocity	527
16.4.3	Example: Conservation of Rotational Momentum	529
16.4.4	Example: Ballistic Pendulum	531
16.4.5	Example: Rotating Rod	533
16.5	General Rotational Motion	536
	Appendix A: Proofs	555
	Appendix B: Solutions	571
	Index	587
