

Contents

1	Introduction	1
1.1	Nature of the Course	1
1.2	What Has Been Left Out?	4
1.3	Organization of the Course	4
	References.	6
2	Overview of Elliptic–Hyperbolic PDE	9
2.1	Remarks on Equation Type.	9
2.2	A Zoo of Elliptic–Hyperbolic Equations	12
2.3	A Simple Elliptic–Hyperbolic System.	14
2.3.1	Boussinesq Systems	16
2.4	A Quasilinear Elliptic–Hyperbolic Equation Having Multiple Sonic Lines	17
2.4.1	Surfaces of Prescribed Gauss Curvature	19
2.5	Local Canonical Forms.	20
2.5.1	Why Do Equations of Keldysh Type Have Weaker Regularity?	22
	References.	26
3	Hodograph and Partial Hodograph Methods	31
3.1	The Hodograph and Legendre Transformations	31
3.2	The Steady Transonic Small-Disturbance Equation.	33
3.2.1	Explicit Solutions	34
3.3	The Busemann Equation.	35
3.3.1	The Hodograph Image of the Compressible Flow Equations Acquires the Geometry of the Projective Disc.	38
3.3.2	Transformation to the Lavrent’ev–Bitsadze Equation	40
3.3.3	Quasilinear Equations in the Hodograph Plane	41

3.4	An Alternative: Explicit Solutions for a Class of Quasilinear Vector Fields	42
3.5	Free Boundary Problems.	47
3.6	A Partial Hodograph Method for a Nonlinear Lavrent'ev–Bitsadze Equation	48
	References.	51
4	Boundary Value Problems	55
4.1	A Quasilinear Tricomi Problem	55
4.1.1	Ingredients of the Proof	57
4.1.2	Remarks on Generalizations	59
4.1.3	Remarks on Lavrent'ev–Bitsadze Equations	62
4.2	Examples of Curvature in the Sonic Line	63
4.2.1	A Physical Model Having a Parabolic Sonic Line: Plasma Heating	63
4.2.2	A Geometric Model Having a Parabolic Sonic Line: Isometric Embedding	65
4.3	A Mixed Dirichlet–Neumann Problem	66
4.3.1	Function-Space Methods.	67
4.3.2	Weak Solutions in Weighted Function Spaces.	67
4.3.3	The Existence of Solutions	68
4.3.4	A Variational Formulation	73
4.4	The Chaplygin Gas Equation.	75
4.4.1	Geometric Interpretation	76
4.4.2	Physical Interpretation, and Elliptic–Hyperbolic Context	76
4.4.3	The Existence of Solutions	77
	References.	78
5	Bäcklund Transformations and Hodge-Theoretic Methods	81
5.1	Auto-Bäcklund Transformations.	82
5.2	An Application to Optics	83
5.3	How to Produce Bäcklund Transformations by Hodge Duality	85
5.4	A Hierarchy of Variational Problems	87
	References.	89
6	Natural Focusing	91
6.1	Introduction to the Isometric Embedding Problem	93
6.2	Remarks	99
6.2.1	An Informal Discussion of the Hard Implicit Function Theorem	99
6.2.2	Immersion Versus Embedding.	103

6.3	Quasilinearization of the Isometric Embedding	
	Problem I: Changes of Variable.	104
6.4	Quasilinearization of the Isometric Embedding	
	Problem II: A Fluid Dynamics Analogy	105
6.5	Energy Condensation	108
	6.5.1 Thin Shells	112
6.6	Natural Focusing	114
	References.	115
Appendix A: Informal Review of Differential Forms		121

Elliptic-Hyperbolic Partial Differential Equations

A Mini-Course in Geometric and Quasilinear Methods

Otway, Th.H.

2015, VII, 128 p. 15 illus., 6 illus. in color., Softcover

ISBN: 978-3-319-19760-9
