

Contents

1	Introduction	1
1.1	Electrocapillarity of Liquids	1
1.2	Surface Free Energy and Surface Stress of Solids	2
1.3	The Estance or the Surface Stress-Charge Coefficient	3
1.4	Experimental Data in the Literature	3
1.5	State of the Theoretical Knowledge	4
1.6	The Aim of the Following Text	6
	References	6
2	The Model of Kronig and Penney	9
2.1	The Density of the Electron Energy Levels $n(E)$	11
2.2	Remarks	13
	Reference	13
3	Tamm's Electronic Surface States	15
	Reference	18
4	The Extension of the Kronig–Penney Model by Binding Forces	19
5	The Separation of the Semi-infinite Model and the Calculation of the Surface Parameters for the Three-Dimensional body at $T = 0$ K (Regula Falsi of Surface Theory)	25
5.1	The Separability of the Chemical Potential	27
5.2	The Separability of the Fermi Distribution Function	29
5.3	The Calculation of Surface Energy, Surface Stress, and Surface Charge at $T = 0$ K (Regula Falsi of Surface Theory)	30
	References	34

6	The Surface Parameters for the Semi-infinite Three-Dimensional Body at Arbitrary Temperature	35
6.1	Discussion	40
	References.	41
7	The Surface Free Energy ϕ and the Point of Zero Charge Determined for the Semi-infinite Model	43
7.1	Electron Transitions from the Bulk into the Surface and the Contribution to the Surface Free Energy ϕ^{Tr}	43
7.2	The Point of Zero Charge (PZC) and the Fermi Level Shift	47
7.3	The Contribution of the Electrostatic Repulsion Between the Electrons in the Surface Bands to the Surface Energy	48
	Reference	51
8	A Model with a Limited Number of Potential Wells	53
8.1	Modeling a Nanoparticle and a Solid Surface	53
8.2	The Energy of the Electrons in the Bulk and in the Surface Bands	54
8.3	Calculation of the Surface Parameters	56
8.3.1	The Surface Energy ϕ^{ESB} of the Electrons in a Surface Band of a Nanocube	57
8.3.2	Calculation of the Surface Free Energy ϕ in a Nanocube.	58
8.3.3	Calculation of the Surface Stress for a Nanocube and a Plate-like Body	60
8.4	Remarks	64
8.5	The Surface Charge Densities and the Point of Zero Charge in a Nanocube	65
	Reference	68
9	Surface Stress-Charge Coefficient (Estance)	69
10	Regard to the Spin in the Foregoing Texts	73
11	Detailed Calculation of the Convolution Integrals	75
	References.	80
12	Comparison of the Results for the Semi-infinite and the Limited Body	81
12.1	The Semi-infinite Body	82
12.1.1	Surface States.	82
12.1.2	Density Distribution of the Energy Levels	82
12.1.3	Remark	82
12.1.4	Surface Free Energy	82

12.2	The Limited Body.	83
12.2.1	Surface States.	83
12.2.2	Density Distribution of the Energy Levels	83
12.2.3	Surface Free Energy of a Nanocube	84
12.2.4	Surface Free Energy of a Plate-like Body.	84
12.3	Summary.	84
13	Calculation of Surface Stress and Herring's Formula.	85
13.1	Conclusions	89
	References.	89
14	Miscellaneous and Open Questions	91
14.1	The Scientific Ambition of this Book	91
14.2	Own Results	92
14.2.1	Semi-infinitely Extended Body at 300 K	92
14.2.2	Nanocube of $10 \times 10 \times 10$ Potential Wells at 0 K . . .	92
14.3	Support for the Presented Theory	93
14.4	Fatigue Limit	94
14.5	Surface Stress and Young's Modulus	95
14.6	Electrocapillarity.	95
14.7	The Minimum of the Surface Free Energy	96
14.8	Fermi Level/Chemical Potential.	96
14.9	The Influence of the Number of Atoms on the Results	97
	References.	97
