

# Contents

## Part I Prerequisites

<b>1</b>	<b>Generalities on Parallel Robots</b> . . . . .	<b>3</b>
1.1	Introduction . . . . .	3
1.2	General Definitions . . . . .	6
1.3	Types of <i>PKM</i> Architectures . . . . .	9
1.3.1	Planar Motions of the Platform . . . . .	9
1.3.2	Spatial Motions of the Platform . . . . .	10
1.3.3	Redundant <i>PKM</i> . . . . .	13
1.3.4	Other Types of <i>PKM</i> . . . . .	14
1.4	Why a Book Dedicated to the Dynamics of Parallel Robots? . . . . .	15
<b>2</b>	<b>Homogeneous Transformation Matrix</b> . . . . .	<b>19</b>
2.1	Homogeneous Coordinates and Homogeneous Transformation Matrix . . . . .	19
2.2	Elementary Transformation Matrices . . . . .	21
2.2.1	Transformation Matrix of a Pure Translation . . . . .	21
2.2.2	Transformation Matrices of a Rotation About the Principle Axes $x$ , $y$ and $z$ . . . . .	21
2.3	Properties of Homogeneous Transformation Matrices . . . . .	22
2.4	Parameterization of the General Matrices of Rotation . . . . .	24
2.4.1	Rotation About One General Axis $u$ . . . . .	24
2.4.2	Quaternions . . . . .	26
2.4.3	Euler Angles . . . . .	27
2.4.4	Roll-Pitch-Yaw Angles . . . . .	29
2.4.5	Tilt-and-Torsion Angles . . . . .	31
<b>3</b>	<b>Representation of Velocities and Forces/Acceleration of a Body</b> . . .	<b>33</b>
3.1	Definition of a Screw . . . . .	33
3.2	Kinematic Screw (or Twist) . . . . .	33

3.3	Representation of Forces and Moments (wrench) . . . . .	34
3.4	Condition of Reciprocity . . . . .	34
3.5	Transformation Matrix Between Twists . . . . .	35
3.6	Transformation Matrix Between Wrenches . . . . .	36
3.7	Acceleration of a Body . . . . .	36
<b>4</b>	<b>Kinematic Description of Multibody Systems . . . . .</b>	<b>39</b>
4.1	Kinematic Pairs and Joint Variables . . . . .	39
4.2	Modified Denavit-Hartenberg Parameters . . . . .	40
4.2.1	Parameterizing Tree-Structure Open Kinematic Chains . . . . .	41
4.2.2	Parameterizing Kinematic Chains Including Closed Loops . . . . .	44
4.2.3	Computation of the Homogeneous Transformation Matrix Representing the Location of the Frame $\mathcal{F}_k$ with Respect to the Frame $\mathcal{F}_i$ . . . . .	47
<b>5</b>	<b>Geometric, Velocity and Acceleration Analysis of Open Kinematic Chains . . . . .</b>	<b>51</b>
5.1	Geometric Analysis of Open Kinematic Chains. . . . .	51
5.1.1	Direct Geometric Model of Open Kinematic Chains. . . . .	51
5.1.2	Inverse Geometric Model of Open Kinematic Chains. . . . .	52
5.2	Velocity Analysis of Open Kinematic Chains. . . . .	52
5.2.1	Forward Kinematic Models . . . . .	52
5.2.2	Inverse Kinematic Models . . . . .	55
5.2.3	Inverse Kinematic Models Degeneracy/Notions of Singularity . . . . .	56
5.2.4	Recursive Computation of Velocities and Kinematic Jacobian Matrix for Open Kinematic Chains . . . . .	57
5.3	Acceleration Analysis of Open Kinematic Chains . . . . .	58
<b>6</b>	<b>Dynamics Principles . . . . .</b>	<b>61</b>
6.1	The Lagrange Formulation . . . . .	61
6.1.1	Introduction to the Lagrange Formulation . . . . .	61
6.1.2	Computation of Kinetic Energy . . . . .	62
6.1.3	Computation of Potential Energy . . . . .	64
6.1.4	Lagrange Equations with Constraints. . . . .	65
6.1.5	Dynamic Model Properties. . . . .	66
6.2	The Newton-Euler Equations . . . . .	67
6.3	The Principle of Virtual Powers . . . . .	68
6.4	Computation of Actuator Input Efforts Under a Wrench Exerted on the End-Effector. . . . .	70

## Part II Dynamics of Rigid Parallel Robots

<b>7</b>	<b>Kinematics of Parallel Robots</b>	75
7.1	Inverse Geometric Model	75
7.1.1	General Methodology	75
7.1.2	Examples	80
7.2	Forward Geometric Model	92
7.2.1	General Methodology	92
7.2.2	Examples	94
7.2.3	Assembly Mode Selection and Numerical Methods for Solving the <i>FGM</i>	101
7.3	Velocity Analysis	105
7.3.1	Computation of the Kinematic Constraint Relations	105
7.3.2	Kinematic Models	107
7.3.3	Computation of the Passive Joint Velocities	111
7.3.4	Examples	113
7.4	Acceleration Analysis	121
7.4.1	Kinematic Constraint Relations of the Second Order	121
7.4.2	Forward and Inverse Second-Order Kinematic Models	122
7.4.3	Computation of the Passive Joint Accelerations	125
7.4.4	Examples	127
7.5	Singularity Analysis	128
7.5.1	Input-Output Singularities	128
7.5.2	Serial Singularities	130
7.5.3	Other Types of Singularities	132
7.5.4	Finding Robot Singular Configurations	133
7.5.5	Finding Robot Serial Singular Configurations	136
7.5.6	Examples	137
<b>8</b>	<b>Dynamic Modeling of Parallel Robots</b>	139
8.1	Introduction	139
8.2	Dynamics of Tree-Structure Robots	143
8.2.1	Newton-Euler Formulation for Computation of the Inverse Dynamic Model	143
8.2.2	Considering the Inertia of Actuators	147
8.2.3	Considering Friction	147
8.2.4	Computing the Vector of Coriolis, Centrifugal, Gravity Effects, Friction and External Wrenches	149
8.2.5	Computing the Inertia Matrix	149
8.2.6	Automatic Computation of the <i>IDM</i> , Inertia Matrix and Vector of Coriolis, Centrifugal/Gravity/Friction Effects	152

8.3	Dynamic Model of the Free Moving Platform . . . . .	153
8.4	Inverse and Direct Dynamic Models of Non-redundant Parallel Robots . . . . .	153
8.4.1	Inverse Dynamic Model. . . . .	154
8.4.2	Direct Dynamic Model . . . . .	159
8.4.3	Examples. . . . .	162
8.5	Inverse and Direct Dynamic Models of Parallel Robots with Actuation Redundancy . . . . .	172
8.5.1	Inverse Dynamic Model. . . . .	172
8.5.2	Direct Dynamic Model . . . . .	175
8.5.3	Example: The DualV. . . . .	178
8.6	Other Models . . . . .	183
8.6.1	Computation of the Ground Reactions of <i>PKM</i> . . . . .	183
8.6.2	Energy Models of <i>PKM</i> . . . . .	187
8.7	Computation of the Base Dynamic Parameters . . . . .	189
8.7.1	Expressing the Dynamic Model Linearly as a Function of the Standard Dynamic Parameters . . .	190
8.7.2	Linearity of the Energy w.r.t. the Inertial Parameters . . . . .	190
8.7.3	Linearity of the <i>IDM</i> w.r.t. the Dynamic Parameters . . . . .	193
8.7.4	Numerical Method Based on a <i>QR</i> Decomposition . . .	195
8.7.5	Examples. . . . .	198
<b>9</b>	<b>Analysis of the Degeneracy Conditions for the Dynamic Model of Parallel Robots. . . . .</b>	<b>201</b>
9.1	Introduction . . . . .	201
9.2	Analysis of the Degeneracy Conditions of the <i>IDM</i> of <i>PKM</i> . . . . .	203
9.2.1	Degeneracy Conditions of the <i>IDM</i> Due to the Matrix $A_r$ . . . . .	204
9.2.2	Degeneracy Conditions of the <i>IDM</i> Due to the Matrix $J_{td}$ . . . . .	204
9.3	Avoiding Infinite Input Efforts While Crossing Type 2 or <i>LPJTS</i> Singularities Thanks to an Optimal Trajectory Planning. . . . .	205
9.3.1	Optimal Trajectory Planning Through Type 2 Singularities . . . . .	205
9.3.2	Optimal Trajectory Planning Through <i>LPJTS</i> Singularities. . . . .	207

9.4	Example 1: The Five-Bar Mechanism Crossing a Type 2 Singularity . . . . .	211
9.4.1	Trajectory Planning Through the Type 2 Singularities . . . . .	211
9.4.2	Simulations and Experimental Results . . . . .	213
9.5	Example 2: The Tripteron Crossing a <i>LPJTS</i> Singularity. . . . .	216
9.5.1	Geometric Description of the Tripteron . . . . .	216
9.5.2	Kinematics of the Tripteron . . . . .	218
9.5.3	Full IDM of the Tripteron . . . . .	223
9.5.4	Trajectory Planning Through the <i>LPJTS</i> Singularities . . . . .	224
9.5.5	Simulations and Experimental Results . . . . .	226
9.6	Discussion . . . . .	232

### Part III Dynamics of Flexible Parallel Robots

<b>10</b>	<b>Elastodynamic Modeling of Parallel Robots . . . . .</b>	<b>237</b>
10.1	Introduction . . . . .	237
10.2	Generalized Newton-Euler Equations of a Flexible Link . . . . .	240
10.2.1	Geometry and First-Order Kinematics of a Clamped-Free Flexible Body . . . . .	240
10.2.2	Computation of the Elastodynamic Model of the Flexible Free Body Using the <i>PVP</i> . . . . .	242
10.2.3	Matrix Form of the Generalized Newton-Euler Model for a Flexible Clamped-Free Body . . . . .	252
10.3	Dynamic Model of Virtual Flexible Systems . . . . .	254
10.3.1	Application of the <i>PVP</i> . . . . .	254
10.3.2	Recursive Computation of Velocities and Jacobian Matrices . . . . .	255
10.3.3	Recursive Computation of the Accelerations. . . . .	257
10.3.4	Elastodynamic Model of the Virtual System. . . . .	260
10.4	Dynamic Model of a Flexible Parallel Robot . . . . .	261
10.4.1	Determination of the Joint and Platform Velocities as a Function of the Generalized Velocities $\dot{\mathbf{q}}$ of the Parallel Robot. . . . .	261
10.4.2	Determination of Joint and Platform Accelerations as a Function of the Generalized Accelerations $\ddot{\mathbf{q}}$ of the Parallel Robot. . . . .	264
10.4.3	Elastodynamic Model of the Actual Parallel Robot . . . . .	265
10.5	Including the Actuator Elasticity. . . . .	266
10.6	Practical Implementation of the Algorithm . . . . .	267
10.7	Case Study: The DualEMPS. . . . .	269

<b>11 Computation of Natural Frequencies . . . . .</b>	<b>279</b>
11.1 Introduction . . . . .	279
11.2 Stiffness and Inertia Matrices of the Virtual System . . . . .	280
11.2.1 Kinetic Energy and Elastic Potential Energy of the Body $\mathcal{B}_{ij}$ . . . . .	281
11.2.2 Kinetic Energy and Elastic Potential Energy of the Virtual Tree Structure. . . . .	282
11.2.3 Kinetic Energy of the Free Moving Platform . . . . .	283
11.2.4 Introducing the Actuator Inertia Effects . . . . .	284
11.3 Stiffness and Inertia Matrices of the <i>PKM</i> . . . . .	285
11.4 Including the Actuator Elasticity. . . . .	287
11.5 Practical Implementation of the Algorithm . . . . .	288
11.6 Case Studies . . . . .	289
11.6.1 Natural Frequencies of DualEMPS . . . . .	289
11.6.2 Natural Frequencies of the NaVARo . . . . .	290
11.7 Conclusion. . . . .	296
<b>Appendix A: Calculation of the Number of Degrees of Freedom             of Robots with Closed Chains . . . . .</b>	<b>299</b>
<b>Appendix B: Lagrange Equations with Multipliers . . . . .</b>	<b>307</b>
<b>Appendix C: Computation of Wrenches Reciprocal to a System             of Twists . . . . .</b>	<b>309</b>
<b>Appendix D: Point-to-Point Trajectory Generation . . . . .</b>	<b>319</b>
<b>Appendix E: Calculation of the Terms <math>\mathbf{f}_{acc_1}</math>, <math>\mathbf{f}_{acc_2}</math> and <math>\mathbf{f}_{acc_3}</math>             in Chapter 10 . . . . .</b>	<b>321</b>
<b>Appendix F: Dynamics Equations for a Clamped-Free             Flexible Beam . . . . .</b>	<b>329</b>
<b>References. . . . .</b>	<b>333</b>
<b>Index . . . . .</b>	<b>347</b>

Dynamics of Parallel Robots

From Rigid Bodies to Flexible Elements

Briot, S.; Khalil, W.

2015, XVII, 350 p. 119 illus., Hardcover

ISBN: 978-3-319-19787-6
