

Contents

1	The Model of a Single Neuron	1
1.1	Informal Description of the Processes of Electrical Activity of the Neuron and the Variety of Models of the Phenomenon	2
1.2	Nature of the Membrane Potential	4
1.3	Sodium–Potassium Cycle	7
1.4	System of Equations of Hodgkin–Huxley	9
1.5	Phenomenological Derivation of Equation with Delay for the Neuron	13
1.6	Asymptotic Analysis of the Equation of the Neuron	17
1.7	Model of a Pure Potassium Current Delay	24
	References	27
2	Model of the Interaction of Neurons	29
2.1	Response to Electrical Action	29
2.2	Model of Electrical Synapse	34
2.3	Model of Chemical Synapse	39
	References	50
3	Model of Wave Propagation in the Ring Neural Structures with Chemical Synapses	51
3.1	Model of Population of Neurons Connected by Chemical Synapses	51
3.2	Model of the Ring Structure of Four Neurons	56
3.3	Model of the Ring Structure of N Neurons	65
3.4	Model of the Double Ring of N Neurons	73
3.5	Concluding Remarks	78
	References	79

4	Model of Self-organization of Oscillations in the Ring	
	System of Homogeneous Neural Models	81
4.1	Model of Action of a Burst of Spikes on the Neuron	82
4.2	Model of Action of the Burst of Spikes on the System of Two Neurons	86
4.3	Architecture and Equations of Neural Network with Modular Organization	90
4.4	Algorithm of Asymptotic Integration of the System of Equations of a Neural Network with Ring-Modular Organization	92
4.5	Dynamics of the Neural Network with Ring-Modular Organization	95
4.6	Conclusion	101
	References	101
5	Model of Adaptation of Neural Ensembles.	103
5.1	Model of Adaptation of Individual Neurons	103
5.2	Model of Adaptation of the Ring Neural Structure	111
	References	116
6	Model of the Neural System, Synchronizing the Wave Packets . . .	117
6.1	Architecture and the Neural Network Model	118
6.2	The Existence of the Attractor of Synchronous Oscillations	120
	References	123
7	Model of the Neural System with Diffusive Interaction of Elements	125
7.1	Oscillations in Diffusion-Related Systems of Equations Simulating Local Neural Networks.	126
7.1.1	Oscillations in the System of Two Neurons.	127
7.1.2	Oscillations in the System of Three Neurons.	131
7.1.3	Some Structures of Oscillations in the Neural Network on a Flat Surface	134
7.2	Structure of the Oscillations in the Fully Connected Network of Diffusionally Interacting Neurons	138
	References	145
8	Pseudo-correlative Dimension of the Electroencephalogram and Its Relation to the Amount of Short-term Memory of the Human.	147
8.1	Pseudo-correlative Dimension and Its Calculation	148
8.2	Description of Experimental Methods and Their Approbation	153
8.3	Results and Discussion	157
	References	161

9	Estimates of Differences of Evoked Potentials	165
9.1	The Phenomenon of EPa	165
9.2	Description of Statistical and Research Methods	167
9.2.1	The Method Based on the Existence of the Separating Plane (Delta-Tailed)	168
9.2.2	Method Based on the Relation of Closeness (Gamma Criterion).	169
9.3	The Results of Research and Their Discussion.	171
	References	177
	Appendix A: Differential-Difference Equations with Delay	179
	Appendix B: Amendment to the Period of the Solution of the Neuron	183
	Appendix C: Model of the Saltatory Conduction of the Nerve Pulse.	191
	Appendix D: Networks of Neurocellular Automata	205
	Appendix E: Networks of W-Neurons in the Problems of Storage of Cyclic Sequences of Binary Patterns	221
