Part I Introduction to Theory and Experiment

1	Introduction to Physics at the High-Energy Frontier	3
1.1	Electroweak Theory	4
1.1.1	The Electroweak Symmetry Breaking	7
1.2	Quantum Chromodynamics	9
1.2.1	The Strong Coupling Constant: “Running” of α_s	10
1.2.2	Infrared Divergencies	11
1.2.3	The Structure of the Proton	11
1.2.4	The Physics of Proton-Proton Collisions	12
1.3	Summary and Experimental Tests of the Standard Model	15
1.3.1	Experimental Tests of the Standard Model	15
1.4	Limitations of the Standard Model	17
	References	18
2	Physics Beyond the Standard Model: Supersymmetry	23
2.1	The Minimal Supersymmetric Standard Model	24
2.1.1	Breaking of Supersymmetry	27
2.1.2	The Hidden Sector—The Origin of Supersymmetry Breaking	28
2.1.3	R-parity	29
2.1.4	Unification of Gauge Couplings	30
2.2	The Higgs Sector in the Minimal Supersymmetric Standard Model	31
2.3	Sparticle Masses in the Minimal Supersymmetric Standard Model	33
2.4	Revisiting the Limitations of the Standard Model	35
	References	36

3	Possible Signatures of Supersymmetry at the Large Hadron Collider	39
3.1	Production of Sparticles at Hadron Colliders	39
3.2	Sparticle Decays	40
3.3	Models for Testing Supersymmetric Signatures.	42
3.3.1	The Phenomenological Minimal Supersymmetric Standard Model	43
3.3.2	The Constrained Minimal Supersymmetric Standard Model	43
3.3.3	The Simplified Model Framework.	44
	References.	46
4	Experimental Set-Up	47
4.1	The Large Hadron Collider	47
4.2	The Compact Muon Solenoid Experiment	50
4.2.1	The Tracking System	52
4.2.2	The Electromagnetic Calorimeter	53
4.2.3	The Hadron Calorimeter	54
4.2.4	The Muon System	56
4.2.5	Trigger and Data Acquisition	57
	References.	58
5	Event Reconstruction for Proton-Proton Collisions	61
5.1	Track Reconstruction.	61
5.1.1	Primary Vertex Reconstruction	62
5.2	The Particle-Flow Algorithm	62
5.3	Muon Reconstruction	63
5.4	Electron Reconstruction	63
5.5	Tau Reconstruction	64
5.6	Photon Reconstruction.	65
5.7	Jet Reconstruction.	65
5.7.1	B-Quark Jet Tagging.	67
5.8	Reconstruction of the Missing Transverse Momentum	69
	References.	70

Part II The Search for Supersymmetry

6	Search for Supersymmetry: Using M_{T2} as Discovery Variable	75
6.1	Definition of the M_{T2} Variable	75
6.2	Definition of the Visible Systems for the M_{T2} Calculation	77
6.3	Kinematical Properties of M_{T2}	80
6.3.1	The Influence of the Initial State Radiation in the M_{T2} Calculation.	83
6.4	The Search for Supersymmetry at $\sqrt{s} = 7$ TeV.	85
	References.	86

7 Search for Supersymmetry in Hadronic Events

Using M_{T2} at $\sqrt{s} = 8$ TeV	89
7.1 Data Selection and Simulation	90
7.2 Event Selection and Validation	92
7.2.1 Validation of the Stability of the M_{T2} Variable	93
7.2.2 Cleaning Procedure Against Instrumental Effects	94
7.2.3 Selection Criteria to Reduce the Standard Model Background	96
7.2.4 Summary of the Event Selection	99
7.3 Optimization and Search Strategy	99
7.3.1 The Inclusive M_{T2} Analysis: Distributions and Background Composition	103
7.4 Prediction of the Background Due to Jet Energy Mismeasurements	105
7.5 Prediction of the Background Due to Leptonic W Boson Decays	109
7.6 Prediction of the Background Due to Z Boson Decays into Neutrinos	115
7.7 Results	125
7.8 Interpretation of the Results	132
7.8.1 Statistical Procedure	132
7.8.2 Exclusion Limits on the Production of Supersymmetric Particles	134
7.9 Comparison of the Results of the M_{T2} Analysis to Other Searches for Supersymmetry	140
7.10 Summary of the Hadronic M_{T2} Search for Supersymmetry	141
7.10.1 Prospects for the Continuation of This Search	142
References	143

8 Assessment of a Search for Stop Pair Production in Dileptonic Events

	147
8.1 Basic Event Selection and Signal Models	148
8.2 M_{T2} -based Search Variables	148
8.2.1 Search with $M_{T2}(lb)$	149
8.2.2 Search with $M_{T2}(b)$	151
8.2.3 Search with $M_{T2}(l)$	152
8.2.4 Search Using Multiple Variants of M_{T2}	152
8.2.5 Comment on the Stop Decays via Sleptons or Sneutrinos	154
8.3 Distinguishing Direct Stop Pair Production from $t\bar{t}$ +jets Production Using the Event Kinematics	154
8.4 Summary	157
References	157

Part III Studies for the Upgrade Program of the Compact Muon Solenoid Detector

9	Upgrade Efforts for the Compact Muon Solenoid Detector	161
	References.	163
10	Physics Performance Study for the Pixel Detector	
	Phase-I Upgrade.	165
10.1	The Need of a Pixel Detector Upgrade	165
10.2	The Design of the Upgraded Phase-1 Pixel Detector	166
10.3	The 2011 $M_{T2}b$ Analysis as a Performance Study of the Pixel Phase-1 Upgrade	167
	References.	171
11	Evolution Studies of the CMS Electromagnetic Calorimeter Endcap Signals	173
11.1	Signal Losses Within the Electromagnetic Calorimeter Endcaps	173
11.2	Characteristic Variables Describing the Radiation Hardness of Detector Components	175
11.3	The Monitoring System of the Electromagnetic Calorimeter . . .	177
11.4	Correlation Between Light Monitoring Signals and μ_{std}	179
11.4.1	Study of the Correlation for a Fixed Time Period . . .	180
11.4.2	Time Evolution of the Correlations	182
11.4.3	Comparison of the Correlation Results with Simulation	184
11.5	Correlations Between Light Monitoring Signals and μ_{SIC} , a Validation.	186
11.6	Correlations Between Light Monitoring Signals and the Burn-In	188
11.6.1	Time Evolution of the Anti-correlations.	189
11.7	Summary.	192
	References.	193
12	Summary	195
	Appendix A: Alternatives to the Hemisphere Algorithm Used in the 7 and 8 TeV Searches	199
	Curriculum Vitae	209
	List of Publications	213

Search for Supersymmetry in Hadronic Final States
Evolution Studies of the CMS Electromagnetic
Calorimeter

Weber, H.

2015, XVIII, 213 p. 120 illus., 63 illus. in color.,

Hardcover
