1	Introduction	1
	References	8
2	High-Frequency Sound Generated by Sound-Aerofoil Interaction in Subsonic Uniform Flow	11
2.1	Formulation of the Problem	12
2.1.1	Aerofoil Geometry and Steady Mean Flow	12
2.1.2	Unsteady Disturbance Equations	14
2.1.3	Form of the Incident Sound	16
2.2	Leading-Edge Inner Solution	18
2.2.1	Solution for the Flat-Plate Term H_0	19
2.2.2	Solution for the Thickness-Related Term H_1	22
2.2.3	Solution for the Thickness-Related Term H_2	24
2.2.4	Solution for the Thickness-Related Term H_3	27
2.2.5	Solution for the Camber-Related Terms $P_i, i = 1, 2, 3$	28
2.3	Solution for the Leading-Edge Outer and Transition Regions	30
2.3.1	Leading-Edge Ray Field	31
2.3.2	Leading-Edge Transition Solution	31
2.4	Solution for the Trailing-Edge Outer, Transition, and Inner Regions	35
2.4.1	Trailing-Edge Ray Field	35
2.4.2	Trailing-Edge Inner Solution	36
2.4.3	Trailing-Edge Transition Solution	39
2.4.4	Matching the Trailing-Edge Transition and Inner Solutions	40
2.4.5	Far-Field Solution from the Trailing Edge	41
2.5	Total Far-Field Solution	43

2.6	Results and Discussion	44
2.6.1	Far-Field Pressure Directivity for the Scattered Sound.	44
2.6.2	Total Far-Field Pressure	50
2.7	Conclusions.	53
	Appendices.	55
2.8	Leading-Edge Inner Solution H_{3p}	55
2.9	Leading-Edge Inner Solutions H_{3ci}	57
2.10	Pressure Jump Across the Trailing Edge	60
	References	61
3	High-Frequency Sound Generated by Gust-Aerofoil Interaction in Subsonic Uniform Flow.	63
3.1	Formulation of the Governing Equations	65
3.2	Leading-Edge Inner Solution	67
3.2.1	Solution for the Flat-Plate Term H_0	68
3.2.2	Solution for Thickness-Related Term H_1	69
3.2.3	Solution for Thickness-Related Term H_2	70
3.2.4	Solution for Thickness-Related Term H_3	72
3.2.5	Solution for Camber-Related Terms $P_i, i = 1, 2, 3$	72
3.3	Outer Solutions	73
3.3.1	Leading-Edge Acoustic Outer Solution	75
3.3.2	Trailing-Edge Acoustic Outer Solution	75
3.4	Leading-Edge Transition Solution.	76
3.5	Trailing-Edge Inner Solution	77
3.6	Trailing-Edge Transition Solution.	79
3.7	Total Far-Field Solution	79
3.8	Results	81
3.8.1	Far-Field Acoustic Pressure.	82
3.8.2	Unsteady Surface Pressure	86
3.8.3	Comparison with Numerical Results.	90
3.9	Conclusions.	94
	Appendices.	95
3.10	Leading-Edge Inner Solution H_3	95
3.11	Pressure Jump Across the Trailing Edge	103
	References	105
4	High-Frequency Sound Generated by Gust-Aerofoil Interaction in Subsonic Shear Flow.	107
4.1	Formulation and Governing Equations	109
4.2	Form of the Incident Gust	112
4.3	Leading-Edge Inner Solution	115
4.3.1	General Solution for Leading-Edge Inner Acoustic Pressure.	115

4.3.2	Outer Limit of the Inner Solution	117
4.4	Leading-Edge Outer Solution	121
4.5	Leading-Edge Transition Solution	124
4.6	Trailing-Edge Solutions	125
4.6.1	Trailing-Edge Inner Solution	125
4.6.2	Trailing-Edge Outer Solution	127
4.6.3	Trailing-Edge Transition Solution	128
4.7	Total Far-Field Solution	129
4.8	Results	130
4.8.1	Evaluation of the Streamfunction	130
4.8.2	Far-Field Results	132
4.9	Conclusions	138
	Appendices	140
4.10	Wiener-Hopf Solution for p_a	140
4.11	Solutions for $p_{a,H}^{0,1}$ and $p_{a,p}^0$	142

Asymptotic Approximations for the Sound Generated by
Aerofoils in Unsteady Subsonic Flows

Ayton, L.

2015, XXI, 178 p. 48 illus., 6 illus. in color., Hardcover

ISBN: 978-3-319-19958-0
