

Contents

1	Introduction	1
1.1	Optical Beams	5
1.2	Beam Propagation	11
1.3	Rotations in Phase Space	13
1.4	Fractional Fourier Transform	16
1.5	Tomographic Reconstruction	21
1.6	Phase-Space Tomography	23
	References	25
2	Radon-Wigner Display	29
2.1	Introduction	29
2.2	Spatial Light Modulators for Lens Implementation and Beam Generation	30
2.3	Programmable Radon-Wigner Display	34
2.4	Experimental Results	38
2.5	Conclusions	44
	References	45
3	Characterization of Beams Separable in Cartesian Coordinates	47
3.1	Introduction	47
3.2	Characterization Method	48
3.3	Separability Test	50
3.4	Experimental Setups	50
3.5	Experimental Results	53
3.6	Conclusions	55
	Appendices	55
3.7	Demonstration of the Separability Test	55
	References	57

4	Rotationally Symmetric Beams	59
4.1	Introduction	59
4.2	Phase-Space Tomography for RSB	60
4.3	Simulations	65
4.4	Experimental Results	69
4.5	Conclusions	71
	Appendices	72
4.6	Simplification of RSB Characterization	72
4.7	AF of a LG Mode	74
4.8	Demonstration of the Rotationally Symmetry Test	77
	References	78
5	General Beams	81
5.1	Introduction	81
5.2	Phase Space Tomographic Coherenscopy	82
5.3	Experimental Setup for PSTC Realization	86
5.4	Characterization of Coherent Beams	90
5.5	Characterization of Partially Coherent Beams	95
5.6	Conclusions	103
	Appendices	104
5.7	MI Reconstruction from Projection Subset for $\alpha = 0$	104
5.8	Beam at the SLM Input Plane	105
	References	106
6	Conclusions	109
	References	112
	About the Author	113

Optical Beam Characterization via Phase-Space
Tomography

Cámara, A.

2015, XIV, 114 p. 58 illus., 27 illus. in color., Hardcover

ISBN: 978-3-319-19979-5
