

Contents

- 1 ODE Models for Systems Biological Networks 1**
 - 1.1 Introduction 1
 - 1.1.1 Problem Types in Systems Biology 1
 - 1.1.2 Example: Population Dynamics 4
 - 1.1.3 Example: Multiple Dose Administration of Drugs 7
 - 1.2 ODE Systems from Chemical or Physiological Networks 9
 - 1.2.1 Elementary Chemical Mechanisms 10
 - 1.2.2 Enzyme Kinetics 14
 - 1.2.3 Assembly of Large ODE Networks 16
 - 1.3 Mathematical Background for Initial Value Problems..... 19
 - 1.3.1 Uniqueness of Solutions 19
 - 1.3.2 Sensitivity of Solutions 22
 - 1.3.3 Asymptotic Stability 26
 - 1.3.4 Singularly Perturbed Problems 30
- 2 Numerical Simulation of ODE Models 33**
 - 2.1 Basic Concepts 33
 - 2.1.1 Local Versus Global Discretization Error:
Theoretical Concepts..... 34
 - 2.1.2 Local Versus Finally Achieved Accuracy:
Algorithmic Concepts..... 38
 - 2.1.3 Stability Concepts for Discretizations..... 41
 - 2.1.4 Stiffness of ODE Problems 46
 - 2.2 Explicit Numerical Integration Methods 48
 - 2.2.1 Runge-Kutta Methods..... 49
 - 2.2.2 Extrapolation Methods 52
 - 2.2.3 Adams Methods 57
 - 2.3 Implicit Numerical Integration Methods 60
 - 2.3.1 Collocation Methods 60
 - 2.3.2 BDF Method 64

2.4	Linearly Implicit One-Step Methods	66
2.4.1	Rosenbrock-Wanner Methods	67
2.4.2	Extrapolation Methods	68
2.5	Choice of Numerical Integrator	72
2.5.1	A General Roadmap for Numerical Integrators	72
2.5.2	Different Numerical Behavior in Two Similar Problems.....	81
2.5.3	Example: Warburg Effect in Tumor Cells.....	84
3	Parameter Identification in ODE Models	89
3.1	Least Squares Problem Formulation.....	90
3.2	Linear Least Squares Problems	95
3.2.1	Normal Equations	95
3.2.2	QR-Factorization	98
3.2.3	Generalized Inverses	104
3.3	Nonlinear Least Squares Problems	108
3.3.1	Local Newton Versus Gauss-Newton Approach	108
3.3.2	Globalization of Gauss-Newton Method	112
3.4	Extension to ODE Models	117
3.4.1	Function Evaluation via Numerical Integration	118
3.4.2	Jacobian Approximation via Parameter Sensitivities	119
3.4.3	Multiple Experiment Case	121
3.5	Illustrative Examples	123
3.5.1	Predator-Prey Model Revisited	123
3.5.2	A Simple Rank-Deficient Problem	126
3.5.3	A Complex Human Menstrual Cycle Problem	130
A	Appendix	139
A.1	Complex Exponential Function	139
A.2	Condition Numbers of Linear Algebra Problems	140
A.3	QR-Factorization with Column Pivoting	143
A.4	Convergence of Newton and Gauss-Newton Methods.....	147
A.5	Adaptive External Numerical Differentiation	152
Software	157
References	161
Index	165

A Guide to Numerical Modelling in Systems Biology

Deuflhard, P.; Röblitz, S.

2015, X, 168 p. 42 illus., 33 illus. in color., Hardcover

ISBN: 978-3-319-20058-3
