

# Contents

<b>1</b>	<b>General Introduction</b>	<b>1</b>
<b>2</b>	<b>Microscopic Formulation of Two-Phase Flows</b>	<b>5</b>
2.1	Introduction	5
2.2	Topological Equations	6
2.3	Mass Balance Equations	8
2.4	Momentum Balance Equations	10
2.5	Energy Balance Equations	12
2.6	Two-Fluid Formulation	17
2.7	Single-Fluid Formulation	18
2.8	Balance Equations for a Whole Fluid Particle	19
	References	23
<b>3</b>	<b>Macroscopic Formulation of Two-Phase Flows: The Two-Fluid Model</b>	<b>25</b>
3.1	Introduction	25
3.2	Classification and Properties of Averaging Operators	26
3.2.1	Ensemble Averaging Operator	26
3.2.2	Time Averaging Operator	29
3.2.3	Space Averaging Operator	31
3.2.4	Multipolar Expansions for Slightly Non Homogeneous Flows	32
3.3	The Classical Two-Fluid Model	33
3.3.1	Presentation of the Classical Two-Fluid Model Equations	33
3.3.2	Analysis of the Closure Issue of the Classical Two-Fluid Model	39

3.4	The Hybrid Two-Fluid Model for Disperse Two-Phase Flow. . . . .	46
3.4.1	Presentation of the Hybrid Two-Fluid Model Equations. . . . .	47
3.4.2	The Closure Problem of the Hybrid Two-Fluid Model . . . . .	52
	References. . . . .	55
<b>4</b>	<b>Surface Equations for Two-Phase Flows . . . . .</b>	<b>57</b>
4.1	Introduction . . . . .	57
4.2	On the Different Definitions of the Interfacial Area Concentration for Two-Phase Flows . . . . .	58
4.2.1	Local Instantaneous Interfacial Area Concentration . . . . .	58
4.2.2	Global Instantaneous Interfacial Area Concentration . . . . .	59
4.2.3	Local, or Time-Averaged, Interfacial Area Concentration . . . . .	60
4.2.4	Link Between the Global Instantaneous and the Local Interfacial Area Concentrations. . . . .	60
4.3	On the Different Forms of the Leibniz Rule (or Reynolds Transport Theorem) for a Surface . . . . .	65
4.3.1	An Open Surface Evolving Freely in Space . . . . .	65
4.3.2	A Surface Evolving Within a Fixed Volume . . . . .	66
4.3.3	Application to the Determination of the Surface Area. . . . .	68
4.4	Local Transport Equations for the Void Fraction and the Interfacial Area Concentration. . . . .	69
4.4.1	Local Instantaneous Transport Equations . . . . .	69
4.4.2	Averaged Transport Equations . . . . .	70
4.5	Introduction to the Theory of Anisotropic Interfaces . . . . .	72
4.6	The Closure Issue of the Mean Topological Equations. . . . .	74
	References. . . . .	75
<b>5</b>	<b>Population Balances and Moments Transport Equations for Disperse Two-Phase Flows. . . . .</b>	<b>77</b>
5.1	Introduction . . . . .	77
5.2	Interfacial Area Concentration in the Context of the Kinetic Theory . . . . .	78
5.3	Population Balance Equations. . . . .	84
5.4	Introduction of Birth and Death Phenomena. . . . .	86
5.4.1	Particle Breakage . . . . .	86
5.4.2	Particle Coalescence . . . . .	89
5.4.3	Particle Nucleation and Collapse. . . . .	92

5.5	Standard Method of Moments . . . . .	92
5.6	Quadrature Methods of Moments . . . . .	96
5.6.1	Quadrature Method of Moments (QMOM). . . . .	96
5.6.2	Direct Quadrature Method of Moments (DQMOM). . . . .	99
5.7	Multi-field Approach for Bubbly Flows. . . . .	102
5.8	Discussion of the Closure Problems for the Moments Transport Equations . . . . .	107
	References. . . . .	108
<b>6</b>	<b>Turbulence Equations for a Continuous Phase. . . . .</b>	<b>111</b>
6.1	Introduction . . . . .	111
6.2	Turbulence Equations for a Single Phase Flow. . . . .	112
6.2.1	Local Instantaneous Equations . . . . .	112
6.2.2	Mean Flow Equations . . . . .	114
6.2.3	Evolution Equation for the Reynolds Stress Tensor . . . . .	117
6.2.4	Evolution Equation for the Turbulent Kinetic Energy . . . . .	119
6.2.5	Evolution Equation for the Turbulence Dissipation Rate . . . . .	119
6.2.6	Evolution Equations for a Fluctuating Passive Scalar . . . . .	120
6.3	Turbulence Equations for a Two-Phase Flow . . . . .	121
6.3.1	Mean Flow Equations . . . . .	121
6.3.2	Evolution Equation for the Reynolds Stress Tensor . . . . .	123
6.3.3	Evolution Equation for the Turbulent Kinetic Energy . . . . .	126
6.3.4	Evolution Equation for the Turbulence Dissipation Rate . . . . .	127
6.3.5	Evolution Equations for a Fluctuating Passive Scalar . . . . .	128
6.4	Identification of the Closure Issue. . . . .	131
6.4.1	The Closure Issue for the Single Phase Flow Case . . . . .	131
6.4.2	The Closure Issue for the Two-Phase Flow Case . . . . .	132
	References. . . . .	134
<b>7</b>	<b>Turbulence Equations for a Disperse Phase . . . . .</b>	<b>135</b>
7.1	Introduction . . . . .	135
7.2	Definitions of Basic Quantities and Fokker-Planck Equations. . . . .	136

7.3	Mean Field Equations for the Continuous Phase . . . . .	142
7.4	Mean Field Equations for the Disperse Phase . . . . .	144
7.5	Inter-particle Collisions . . . . .	150
7.5.1	Dynamics of a Binary Collision . . . . .	150
7.5.2	Collision Operator. . . . .	151
7.6	Discussion of the Closure Issue . . . . .	155
