

Contents

1	Introduction	1
1.1	The Origin of Edge Colorings	1
1.2	Proper Edge Colorings	2
1.3	Proper Vertex Colorings	3
2	The Irregularity Strength of a Graph	5
2.1	Sum-Defined Vertex Colorings: Irregularity Strength	5
2.2	On the Irregularity Strength of Regular Graphs	8
2.3	The Irregularity Strength of Paths and Cycles	17
2.4	Additional Bounds for the Irregularity Strength of a Graph	22
3	Modular Sum-Defined Irregular Colorings	31
3.1	Graceful Graphs	32
3.2	Modular Edge-Graceful Graphs	33
3.3	Non-modular Edge-Graceful Graphs	37
3.4	Nowhere-Zero Modular Edge-Graceful Graphs	40
4	Set-Defined Irregular Colorings	43
4.1	The Set Irregular Chromatic Index	43
4.2	Complete Graphs and Hypercubes	45
4.3	Complete Bipartite Graphs	49
5	Multiset-Defined Irregular Colorings	51
5.1	The Multiset Irregular Chromatic Index	51
5.2	Regular Graphs	54
5.3	Complete Bipartite Graphs	55
5.4	Trees	56
5.5	Max-Min Value Problems	58
6	Sum-Defined Neighbor-Distinguishing Colorings	61
6.1	The Sum Distinguishing Index	61
6.2	The 1-2-3 Conjecture	63
6.3	The Multiset Distinguishing Index	65

7	Modular Sum-Defined Neighbor-Distinguishing Colorings	69
7.1	Modular Chromatic Index	69
7.2	Bipartite Graphs	71
7.3	Modular Chromatic Index and Chromatic Number	77
8	Strong Edge Colorings of Graphs	81
8.1	The Strong Chromatic Index	81
8.2	Binomial Colorings of Graphs	85
8.3	The Neighbor Strong Chromatic Index	91
9	Sum-Defined Chromatic Indices	95
9.1	The Irregular-Sum Chromatic Index	95
9.2	The Proper-Sum Chromatic Index	98
9.3	The Twin Chromatic Index	102
9.4	Trees	106
	References	113
	Index	117
