

Contents

1	Introduction	1
1.1	Landslides—Why So Complex Phenomena?	1
1.2	Overview of Global Landslide Impact	5
1.3	Research Gap	12
1.4	Objectives and Outline of the Study	15
	References	19
2	Landslide Databases—State of Research and the Case of Germany	25
2.1	Evolution of Landslide Databases—An Overview	25
2.2	Landslide Database for the Federal Republic of Germany	29
2.2.1	Background and Goals of the Database	29
2.2.2	Structure, Content, and Information Sources of the Database	30
2.2.3	Examples of Regional Database Application	35
	References	40
3	Study Area	45
3.1	Regional Setting	45
3.2	Landslide Types, Processes, and Materials	47
	References	55
4	Methodology	59
4.1	Soil Water Balance Model	59
4.1.1	Introduction	59
4.1.2	Model Description	61
4.2	Landslide Susceptibility Model	67
4.2.1	Introduction	67
4.2.2	Model Description	71

4.3	Landslide Cost Assessment Model.	79
4.3.1	Introduction	79
4.3.2	Model Description	83
	References	91
5	Results	107
5.1	Spatial Hazard—Where Do Landslides Occur?	107
5.1.1	Landslide Characteristics and Geofactor Weights	107
5.1.2	Landslide Susceptibility Map	110
5.1.3	Model Assessment	114
5.1.4	Discussion	116
5.2	Temporal Hazard—When and Why Do Landslides Occur?	122
5.2.1	Stability Criteria and Strength Properties of Hillslope Sediments	122
5.2.2	Temporal Development of Soil Water Balance	123
5.2.3	Correlation Between Landslide Activity and Simulated Soil Moisture	124
5.2.4	Critical Soil Moisture Threshold	124
5.2.5	Recurrence Frequency	125
5.2.6	Landslide Volume and Soil Moisture Level	126
5.2.7	Period of Saturation and Initiation Time	127
5.2.8	Discussion	128
5.3	Hazard Impact—How Much Do Landslides Cost?	129
5.3.1	Landslide Losses for Highways in the Upper Weser Area	129
5.3.2	Landslide Losses for Highways in the Lower Saxon Uplands	132
5.3.3	Discussion	134
	References	138
6	Synthesis—Towards Integrated Assessment of Landslide Risk	143
6.1	Created Risk—The Role of Human Activity	143
6.2	Are Landslides Economically Relevant?	148
6.3	Conclusions	151
	References	154

Landslide Databases as Tools for Integrated
Assessment of Landslide Risk

Klose, M.

2015, XIV, 156 p. 35 illus., 28 illus. in color., Hardcover

ISBN: 978-3-319-20402-4
