

Contents

1	Introduction	1
	Exercises	6
2	Lévy Processes and Lévy-Driven Queues	7
2.1	Infinitely Divisible Distributions, Lévy Processes	7
2.2	Spectrally One-Sided Lévy Processes	10
2.3	α -Stable Lévy Motions	15
2.4	Lévy-Driven Queues	17
	Exercises	21
3	Steady-State Workload	23
3.1	Spectrally Positive Case	23
3.2	Spectrally Negative Case	30
3.3	Spectrally Two-Sided Case	30
3.4	Spectrally Two-Sided Case: Phase-Type Jumps	39
3.5	Spectrally Two-Sided Case: Meromorphic Processes	44
	Exercises	46
4	Transient Workload	49
4.1	Spectrally Positive Case	49
4.2	Spectrally Negative Case	55
4.3	Spectrally Two-Sided Case	60
	Exercises	65
5	Heavy Traffic	67
5.1	Lévy Inputs with Finite Variance	69
5.2	Lévy Inputs in the Domain of a Stable Law	74
	Exercises	78
6	Busy Period	81
6.1	Spectrally Positive Case	82
6.2	Spectrally Negative Case	85
6.3	Spectrally Two-Sided Case	87

6.4	Infimum Over Given Time Interval	88
	Exercises	92
7	Workload Correlation Function	97
7.1	Spectrally Positive Case: Transform	97
7.2	Spectrally Negative Case: Transform	99
7.3	Spectrally Positive Case: Structural Results	100
7.4	Spectrally Negative Case: Structural Results	103
	Exercises	104
8	Stationary Workload Asymptotics	105
8.1	Light-Tailed Regime	106
8.2	Intermediate Regime	111
8.3	Heavy-Tailed Regime	112
	Exercises	116
9	Transient Asymptotics	119
9.1	Transient Workload Asymptotics	119
9.2	Joint Transient Distribution	122
9.3	Busy Period and Correlation Function	124
9.4	Infimum over Given Time Interval	127
	Exercises	128
10	Simulation of Lévy-Driven Queues	131
10.1	Simulation of Lévy-Driven Queues	131
10.2	Estimation of Workload Asymptotics	134
10.3	Estimation of Busy-Period Asymptotics	136
10.4	Estimation of Workload Correlation Function	139
	Exercises	141
11	Variants of the Standard Queue	143
11.1	Finite-Buffer Queues	143
11.2	Models with Feedback	148
11.3	Vacation and Polling Models	149
11.4	Models with Markov-Additive Input	150
	Exercises	157
12	Lévy-Driven Tandem Queues	161
12.1	Representation for Stationary Downstream Workload	163
12.2	Steady-State Workload of the Downstream Queue	165
12.3	Transient Downstream Workload	169
12.4	Stationary Downstream Workload Asymptotics	172
12.5	Bivariate Distribution	174
	Exercises	178
13	Lévy-Driven Queueing Networks	181
13.1	Definition, Multidimensional Skorokhod Problem	181
13.2	Lévy-Driven Tree Networks	183

13.3	Representation for the Stationary Workload	186
13.4	Multinode Tandem Networks	189
13.5	Tree Networks: Stationary Distribution at a Specific Node	194
13.6	Priority Fluid Queues	195
	Exercises	196
14	Applications in Communication Networks	197
14.1	Construction of Stationary On–Off Source	198
14.2	Convergence of Traffic Process: Horizontal Aggregation	199
14.3	Convergence of Traffic Process: Vertical Aggregation	203
14.4	Convergence of Workload Processes	205
	Exercises	206
15	Applications in Mathematical Finance	209
15.1	Specific Lévy Processes in Finance	210
15.2	Estimation	212
15.3	Distribution of Running Maximum.....	214
15.4	Option Pricing: Payoff Structures	217
15.5	Option Pricing: Transforms of Prices	219
15.6	Applications in Non-life Insurance	225
15.7	Other Applications in Finance	232
	Exercises	233
16	Computational Aspects: Inversion Techniques.....	235
16.1	Approach 1: Approximation and Inversion	236
16.2	Approach 2: Repeated Inversion.....	238
16.3	Other Applications	240
	Exercises	243
17	Concluding Remarks	245
	References.....	247

Queues and Lévy Fluctuation Theory

Debicki, K.; Mandjes, M.

2015, XI, 255 p. 12 illus., Softcover

ISBN: 978-3-319-20692-9
