

Contents

1	An Introduction: The Historical-Conceptual Reference Frame	1
2	Description of the Most Important Elements of Leibniz's Planetary Theory	7
2.1	Physical Presuppositions, the <i>Circulatio harmonica</i> and the <i>Motus paracentricus</i>	7
2.1.1	Leibniz's Assertions	7
2.1.2	Commentaries	10
2.2	The <i>Motus Paracentricus</i> and Its Properties	13
2.2.1	Leibniz's Assertions	13
2.2.2	Commentaries	17
2.3	Elliptical Motion and Inverse Square Law	22
2.3.1	Leibniz's Assertions	22
2.3.2	Commentaries: Two Different Models for Planetary Theory	28
2.4	The Final Description of the Solar System in the <i>Tentamen</i>	29
2.4.1	Leibniz's Assertions	29
2.4.2	Commentaries	30
3	An Interlude: Leibniz's Concept of Inertia	31
3.1	Leibniz and Natural Inertia	32
3.2	Leibniz: Newtonian Inertia and Conate to Recede Along the Tangent	40
4	The Final Version of Leibniz's Planetary Theory	45
4.1	A New Model for the <i>conatus excussorius</i>	46
4.1.1	Circular Path and Falling Bodies: Leibniz's Assertions . . .	46
4.1.2	Circular Path and Falling Bodies: Commentaries	49
4.1.3	The New Model for the <i>conatus excussorius</i> : Leibniz's Assertions	54
4.1.4	The New Model for the <i>conatus excussorius</i> : Commentaries	56

4.2	Gregory's Criticism and Leibniz's Answers	60
4.2.1	Gregory's Criticisms	60
4.2.2	Leibniz's Answers	62
4.2.3	Leibniz's Answers to Gregory's Criticisms: Commentaries	64
5	Gravity and Cosmology	71
5.1	<i>Hypothesis Physica nova</i>	74
5.2	1677: Letter to Honoratus Fabri	81
5.3	The <i>Tentamen</i>	88
5.3.1	Interpretation of Leibniz's Statements	89
5.4	The <i>Tentamen</i> : <i>Zweite Bearbeitung</i>	91
5.4.1	Leibniz's Assertions and Specific Interpretations	92
5.4.2	General Interpretation	95
5.5	<i>De causa gravitatis</i> and Leibniz's Thought Around 1690	98
5.6	<i>Illustratio Tentaminis</i> and Other Late Works	104
5.6.1	Gravity as an Action Deriving from the <i>conatus</i> <i>explosivus</i>	104
5.6.2	Gravity as an Action Deriving from the Centrifugal Force	106
5.7	Final Remarks on Leibniz's Gravity Theory	108
6	Kepler's Influence on Leibniz's Planetary Theory	115
6.1	Kepler/Leibniz: The Division of Orbital Motion into Two Components	116
6.1.1	The Mean Motion	117
6.1.2	Approaching to and Moving Away from the Sun: Area Law and the Problem of Ellipticity	121
6.1.2.1	Kepler's Doctrine and Its Interpretation	121
6.1.2.2	The Influence of Kepler on Leibniz's Concept of <i>Velocitas Circulandi</i> and <i>Circulatio</i> <i>Harmonica</i>	125
6.2	The Physical Support of Kepler's and Leibniz's Planetary Theory	136
6.3	The Second Level of Causation: The Concept of Harmony	140
6.3.1	Leibniz: Pre-established Harmony, Entelechies, Final Causes	143
6.3.2	Connections with Kepler	152
6.3.2.1	Final-Formal Causes and Harmony: Analogies Kepler-Leibniz	152
6.4	Final Remarks	162
7	Conclusion	165
	References	169
	Authors Index	185

The Complex Itinerary of Leibniz's Planetary Theory
Physical Convictions, Metaphysical Principles and
Keplerian Inspiration

Bussotti, P.

2015, X, 188 p., Hardcover

ISBN: 978-3-319-21235-7
