Contents

1 The First Attempts of Carbon Melting and Obtaining Diamond Phase of Carbon (1911–1939) 1
1.1 Astrophysical and Terrestrial Aspects of the Carbon Study. . . . 1
1.2 State of the Art with Graphite Melting in 1911 Year. 5
1.3 The First Substantial Experiments of Stationary Study of Graphite by Pirani 1925–1939 6
1.4 Estimated Study for Obtaining Diamond by Leipunsky 1939. . . 9
References. 11

2 Resistivity and Heat Capacity for Solid Graphite up to 3000 K. . . 13
References. 16

3 Carbon Triple Point (Graphite/Liquid/Vapor) 17
3.1 First Attempts to Obtain Triple Point Parameters (1939–1976) 17
3.1.1 The First Experimental Evidence of the Pressure at the Triple Point Slightly Higher 100 Bar 17
3.1.2 Effort to Search Phase Boundary Solid–Liquid at a Pressure up to 1000 Bar 21
3.1.3 Detailed Investigations of Carbon Under Laser Heating by Haaland and His Critical Review of Previous Determination of Triple Point Parameters (All the Conclusion Made by Haaland, but not the Author of the Monograph) 23
3.2 The Role of the Condensed Graphite Vapor at the Laser Heating 30
3.3 The Start of Graphite Melting Recorded by the Enthalpy 32
3.4 Start of Melting Obtained at Milliseconds Heating 32
3.5 Temperature at the Melting Point Obtained in the Experiments with the Different Velocity of Heating. 36

3.6 Temperature of the Triple Point Under Steady State Laser Heating . . . 39
3.7 The Result of the Discussion on the Triple Point Parameters . . . 40
3.8 Give the Experimental Facts on Carbon (Just Near the Melting Point) . . . 42
References . . . 42

4 Resistivity up to Melting and the Recording of Melting Area . . . 47
4.1 Graphite Resistivity (Versus Inserted Energy Only) Under Pulse Current Heating . . . 48
4.1.1 Graphite Resistivity (Versus Inserted Energy) at High Pressure . . . 48
4.1.2 Correspondence of the Author with Francis Bundy, 1999 . . . 58
4.1.3 Resistance Against Inserted Energy up to Melting (Fast Electrical Heating) . . . 60
4.2 Melting Area Recorded Under Pulse Heating and Emissivity Estimation . . . 70
4.2.1 The Start of Melting and Graphite Emissivity at Milliseconds Current Heating . . . 70
4.2.2 The Whole Temperature Plateau Recording (First Published) for Graphite of Low Initial Density . . . 74
4.2.3 Particular Feature of Recording of Graphite Melting Under Laser Heating . . . 77
References . . . 80

5 Stationary Experiments on Physical Carbon Properties (Enthalpy and Thermodynamic Functions) Against Temperature . . . 83
5.1 Enthalpy Against Temperature (Steady State Experiments up to 3800 K, and Further Calculation up to 4900 K) . . . 83
5.2 Expansion Graphite upon Melting (Calculation) . . . 88
References . . . 93

6 Liquid Carbon Properties Against Input Energy Only . . . 95
6.1 Resistivity Against Input Energy Near the Melting Point . . . 96
6.1.1 Liquid Carbon Resistivity just at the Melting Point (Experiments by Togaya 1997 and 2000) . . . 96
6.1.2 Resistivity Against Pressure Just After the Melting . . . 101
6.1.3 Experiment by Togaya 2010 [11] . . . 103
6.1.4 Discussion on the Resistivity at the Carbon Melting Point . . . 105

6.2 The Fast Electrical Heating of Different Grades of Carbon 109
6.2.1 Resistivity and Expansion at the Melting Point (Gathers et al.) 109
6.2.2 Advantages of Fast Heating (Microseconds) by Electrical Pulse Current Before Slow (Milliseconds) Heating 114
6.2.3 Resistivity of the Carbon in a Broad Range of Liquid State (with the Expansion Included) 118
6.2.4 Resistivity of Dense Isotropic Graphite MF-307 Higher Melting Point (with the Expansion Included) . . . 121
6.2.5 Critical Sensitivity of Graphite Melting to the Magnitude of the Pressure (Experiments in the Sapphire Capillary Tubes) 127
6.2.6 Pulse "Pinch" Pressure at Fast Electrical Heating [36] . . . 134
References 140

7 Experimental Setup in Fast Heating of Carbon 143
7.1 Pulse Experimental Arrangements in Laboratory of Electro-exploding Processes (JIHT) 143
7.1.1 Introduction 143
7.1.2 Pulse Experimental Setup for Training Students and Postgraduates 145
7.1.3 Powerful Pulse Installation for Fast Heating of Graphite Plates 152
7.1.4 Specimens 157
7.2 Choice of a Blackbody Design and Fast Pyrometer for Recording Melting and Liquid State of Carbon 158
7.2.1 Select a Blackbody Design 158
7.2.2 Fast Pyrometer Made by V.N. Korobenko (JIHT) 164
7.3 Melting and Liquid State Recorded at Fast Pulse Heating 166
7.3.1 Melting of Anisotropic Graphite Placed Between Two Sapphire Plates 166
7.3.2 Melting of Anisotropic Graphite Placed Inside the Sapphire Capillary Tube 170
7.3.3 Estimation of Sapphire Melting and the Possible Destruction of a Sapphire Tubes 173
7.4 Input Energy Versus Temperature for Liquid Carbon State (up to 12,000 K) 176
References 180

8 The Evolution of Experimental Carbon Phase Diagram 183
8.1 Phase Diagram by Vereshchagin (1963 Year) 183
8.2 Phase Diagram for Carbon Obtained by Francis Bundy 185
8.3 Phase Diagram for Carbon, Obtained by Motohiro Togaya 192

8.4 The Dependence of Tmelting Against Pressure 193
8.5 Phase Diagram for Small Particles of Carbon 196
8.6 Modeling of Carbon Phase Diagram 198
8.6.1 Data of Ghiringhelli and Meijer 198
8.6.2 Data of Glosli and Ree 202
8.6.3 Data of Umantsev, and Akkerman 202
8.6.4 Data of Colonna, Fasolino, and Meijer 203
8.6.5 Data of Shabalin 204
8.6.6 Data of Orekhov and Stegailov 204
8.6.7 The Resume for All Considered Papers of the Sect. 8.6 208
References 209

9 Pulse Heating Application to Study High-Pressure Carbon State 213
9.1 The Advantages of Fast Carbon Heating to Measure Properties at High Temperatures and Some Practical Applications 213
9.2 From Diamond—to Liquid Carbon with Temperature Recording (Experiment by Eggert et al. USA [14]) 215
9.3 From Diamond—to Liquid Carbon at the Highest Pressure (Experiment by R.F. Smith et al. [17] 2014, USA) 218
9.4 Methods Summary 218
References 219

10 Graphene Investigation 221
10.1 Calculation of Graphene Melting 221
10.2 Thermal Properties of Graphene: Experiments and Theory of Alexander Balandin and Co-authors 223
10.3 Measuring of Melting Temperature of the HAPG Graphite Under Fast Electrical Heating in 2015 Year 231
References 233

11 Conclusion 237
