

Contents

1	Introduction	1
1.1	Motivation	1
1.1.1	Sequentiality, Nondeterminism and Concurrency	2
1.1.2	Interaction, Communication and Process Algebra	5
1.2	Why This Book?	7
1.2.1	Structure of the Book	8
1.2.2	How to Use It	9
1.3	Background	9
1.3.1	Sets, Relations and Functions	10
1.3.2	Alphabets, Strings, Languages and Regular Expressions	13
1.3.3	Grammars and the Chomsky Hierarchy	14
1.3.4	Finite Automata and Turing Machines	16
1.3.5	Decidable and Semi-decidable Sets and Problems	17
2	Transition Systems and Behavioral Equivalences	21
2.1	Modeling a Reactive System	21
2.2	Labeled Transition Systems	25
2.3	Behavioral Equivalences	29
2.3.1	Isomorphism	30
2.3.2	Traces	31
2.3.3	Simulation	36
2.3.4	Bisimulation	43
2.4	Abstracting from Invisible Actions	52
2.4.1	Weak Traces	53
2.4.2	Weak Simulation and Weak Bisimulation	57
2.4.3	Branching Bisimulation	66
2.5	Bisimilarity as a Fixed Point	72
3	CCS: A Calculus of Communicating Systems	81
3.1	A Language for Describing Reactive Systems	81
3.1.1	An Informal Overview of CCS Operators	83

3.1.2	Formal Syntax	90
3.2	Structural Operational Semantics	94
3.3	About Guardedness	100
3.3.1	Guardedness Implies Finite Branching	100
3.3.2	Unique Solution of Equations	101
3.4	Some Subclasses of CCS Processes	105
3.4.1	Finite CCS	107
3.4.2	Finite-State CCS	110
3.4.3	Regular CCS	113
3.4.4	BPP: Basic Parallel Processes	124
3.4.5	Finite-Net CCS	129
3.4.6	Finitary CCS	133
3.5	Turing-Completeness	138
3.5.1	Counter Machines	138
3.5.2	Encoding Counter Machines into Finitary CCS	140
3.5.3	Undecidability of Behavioral Equivalences for Finitary CCS	143
3.5.4	Undecidability of Bisimilarity for Finite-Net CCS	146
3.6	Value-Passing CCS	151
4	Algebraic Laws, Congruences and Axiomatizations	163
4.1	Some Algebraic Laws	163
4.1.1	Laws for Strong Equivalences	163
4.1.2	Syntactic Substitution and Alpha-Conversion	168
4.1.3	Laws for Weak Equivalences	175
4.2	Congruence	179
4.2.1	Strong Bisimulation Equivalence Is a Congruence	179
4.2.2	Recursion	181
4.2.3	Weak Equivalences Are Congruences	184
4.3	Axiomatization of Finite Processes	188
4.3.1	Equational Deduction	189
4.3.2	Axiomatizing Strong Equivalences	192
4.3.3	Axiomatizing Weak Equivalences	196
4.3.4	Left Merge and Communication Merge	201
5	Additional Operators	205
5.1	Internal Choice	205
5.2	Hiding	207
5.3	Relabeling	210
5.4	Sequential Composition	213
5.4.1	Transition Systems with Final States	214
5.4.2	Finite BPA	219
5.4.3	BPA*: Finite BPA with Iteration	224
5.4.4	BPA: Finite BPA with Recursion	228
5.4.5	PA and PAER	233
5.4.6	Derived Operator	237

5.5	Replication	250
5.5.1	Guarded Replication	254
5.6	Multi-party Synchronization	256
6	Multi-CCS	259
6.1	Lack of Expressiveness of CCS	259
6.1.1	Dining Philosophers Problem	259
6.1.2	Strong Prefixing: An Operator for Atomicity	263
6.1.3	Multi-party Synchronization	266
6.2	Syntax and Operational Semantics	270
6.2.1	Conservative Extension	276
6.2.2	Well-Formed Processes	279
6.2.3	Some Subclasses of Multi-CCS Processes	287
6.3	Behavioral Semantics	288
6.3.1	Interleaving Semantics	288
6.3.2	Step Semantics	291
6.3.3	Step Bisimilarity Implies Interleaving Bisimilarity	294
6.3.4	Properties of the Step Semantics	301
6.4	Case Studies	302
6.4.1	Concurrent Readers and Writers	302
6.4.2	Courteous Dining Philosophers	304
6.4.3	Cigarette Smokers Problem	306
6.5	Expressiveness	307
6.5.1	Choice	308
6.5.2	Relabeling	312
6.5.3	CSP Multiway Synchronization	313
6.5.4	Last Man Standing Problem	318
6.5.5	Conclusion	319
	Glossary	323
	References	325
	Index	331

Introduction to Concurrency Theory

Transition Systems and CCS

Gorrieri, R.; Versari, C.

2015, XI, 334 p. 63 illus., Hardcover

ISBN: 978-3-319-21490-0
