<b>Preface</b> .....	v
<b>Introduction</b> .....	xi
<b>1 Basic Concepts</b> .....	1
1.1 Evolution operators and dynamical systems .....	1
1.2 Trajectories, invariant sets, and equilibria .....	4
1.3 Omega-limit sets.....	7
1.4 Limiting properties of individual trajectories .....	10
1.5 Recurrent properties of trajectories .....	13
1.5.1 Wandering and nonwandering points .....	14
1.5.2 Center of attraction .....	14
1.5.3 Almost recurrent and recurrent trajectories .....	18
1.5.4 Almost periodic trajectories.....	21
1.6 Equilibria and Lyapunov stability .....	22
1.7 Complete theory of 1D continuous systems.....	25
1.8 Possible types of qualitative behaviors in 2D systems.....	30
1.8.1 General facts and Poincaré-Bendixson theory .....	30
1.8.2 Lower bounds for cycle periods .....	33
1.8.3 Example of $\omega$ -limit set with three unstable equilibria .....	34
1.8.4 On 2D systems generated by a second order equation.....	37
1.9 Bifurcation theory by means of examples.....	39
<b>2 General Facts on Dissipative Systems</b> .....	47
2.1 Dissipative dynamical systems .....	47
2.2 Asymptotic compactness and smoothness .....	51
2.2.1 Basic definitions and facts .....	52
2.2.2 Kuratowski's measure of noncompactness .....	54
2.2.3 Criteria of asymptotic compactness via weak quasi-stability .....	57
2.3 Global attractors .....	61
2.3.1 Existence and basic properties .....	62
2.3.2 Weak global attractor .....	68
	vii

2.3.3	Stability properties and reduction principle .....	69
2.3.4	Stability of attractors with respect to parameters .....	75
2.4	Gradient systems .....	80
2.4.1	Lyapunov function .....	80
2.4.2	Geometric structure of the attractor .....	81
2.4.3	Criteria of existence of global attractors for gradient systems .....	88
<b>3</b>	<b>Finite-Dimensional Behavior and Quasi-Stability</b> .....	91
3.1	Dimension of global attractors .....	91
3.1.1	Fractal and Hausdorff dimensions .....	92
3.1.2	Criteria for finite dimension of invariant sets: Lipschitz case .....	98
3.1.3	Criteria for finite dimension of invariant sets: $C^1$ case .....	107
3.2	Exponential attractors for discrete systems .....	115
3.3	Determining functionals .....	120
3.3.1	Main concepts .....	120
3.3.2	A result on the existence of determining functionals .....	126
3.4	Quasi-stable systems .....	128
3.4.1	General concept of a quasi-stable system .....	129
3.4.2	Quasi-stable systems: special case .....	134
3.4.3	Asymptotically quasi-stable systems .....	137
<b>4</b>	<b>Abstract Parabolic Problems</b> .....	145
4.1	Positive operators with discrete spectrum .....	145
4.2	Well-posedness of semilinear parabolic equations .....	151
4.2.1	Basic well-posedness theorem .....	152
4.2.2	A case study: Henry-Miklavčič model .....	156
4.2.3	Galerkin method .....	160
4.2.4	Nonlinearity with the main potential part .....	162
4.2.5	Semilinear heat (reaction-diffusion) equation .....	165
4.3	Long-time dynamics in semilinear parabolic equations .....	167
4.3.1	Dissipativity and compactness .....	167
4.3.2	Stationary solutions .....	170
4.3.3	Squeezing and quasi-stability .....	171
4.3.4	Global and exponential attractors .....	174
4.3.5	Gradient structure and rates of stabilization to equilibria ...	175
4.3.6	Determining functionals .....	181
4.3.7	Discrete data assimilation .....	184
4.4	Abstract model for 2D hydrodynamical systems .....	188
4.4.1	Abstract hypotheses and motivation .....	188
4.4.2	Well-posedness .....	191
4.4.3	Generation of $C^1$ dynamical system .....	194
4.5	Long-time dynamics in 2D hydrodynamical systems .....	197
4.5.1	Dissipativity .....	197
4.5.2	Determining functionals .....	198

4.5.3	Compactness of the semiflow and a global attractor .....	199
4.5.4	Squeezing, quasi-stability, and finite-dimensional attractors .....	203
4.5.5	Data assimilation .....	207
4.6	Hydrodynamical applications .....	211
4.6.1	2D magnetohydrodynamic equations .....	211
4.6.2	2D Boussinesq model for the Bénard convection .....	213
4.6.3	2D magnetic Bénard problem .....	214
4.6.4	3D Leray $\alpha$ -model for Navier-Stokes equations .....	215
4.6.5	Shell model of turbulence .....	216
4.6.6	Hopf model of turbulence .....	217
<b>5</b>	<b>Second Order Evolution Equations .....</b>	<b>219</b>
5.1	Generation of a dynamical system .....	220
5.1.1	Main hypotheses and motivation .....	220
5.1.2	Well-posedness: nondegenerate case .....	224
5.1.3	Well-posedness: degenerate case .....	228
5.2	Global attractors .....	232
5.2.1	Existence of regular attractors .....	233
5.2.2	Rate of stabilization to equilibria .....	241
5.3	Properties of the attractor .....	246
5.3.1	Finite dimension and smoothness .....	246
5.3.2	Upper semicontinuity of attractors .....	255
5.3.3	A model with noncompact global attractor .....	257
5.4	Kirchhoff wave models with a structural nonlinear damping .....	261
5.4.1	Well-posedness .....	263
5.4.2	Smooth solutions .....	272
5.4.3	Long-time dynamics .....	275
5.4.4	An application .....	282
<b>6</b>	<b>Delay Equations in Infinite-Dimensional Spaces .....</b>	<b>285</b>
6.1	Models with parabolic main part and Lipschitz delay term .....	286
6.1.1	Well-posedness and generation of a dynamical system .....	286
6.1.2	Global and exponential attractors .....	293
6.1.3	Application: reaction-diffusion (heat) equation with delay .....	301
6.2	Parabolic problems with state-dependent delay: a case study .....	302
6.2.1	Model description .....	303
6.2.2	Well-posedness .....	306
6.2.3	Long-time dynamics: hypotheses and statement .....	314
6.2.4	Proof of the existence of a global attractor .....	316
6.2.5	Long-time dynamics: dimension and exponential attractor ..	321
6.3	Second order in time evolution equations with delay .....	323
6.3.1	Well-posedness and generation of a dynamical system .....	324
6.3.2	Asymptotic properties: dissipativity .....	329
6.3.3	Asymptotic properties: quasi-stability .....	334

6.3.4	Global and exponential attractors .....	342
6.3.5	Remark on models with structural damping.....	344
6.3.6	Applications: plate and wave models .....	345
<b>A</b>	<b>Auxiliary Facts</b> .....	349
A.1	Generation of continuous systems by ODEs .....	349
A.2	Two Gronwall-type lemmas.....	353
A.3	Vector-valued functions and compactness theorems.....	357
A.3.1	Continuous vector-valued functions .....	357
A.3.2	Bochner integral and vector-valued $L_p$ functions .....	358
A.3.3	Compactness theorems for vector-valued functions .....	362
A.4	Approximation of identity by uniformly bounded mappings.....	363
A.5	Elements of differential calculus in Banach spaces.....	364
A.6	The Orlicz theorem on uniqueness for parabolic problems .....	367
A.7	Monotonicity method for well-posedness of 2D hydrodynamical systems .....	372
	<b>References</b> .....	377
	<b>Index</b> .....	387
