

Contents

Part I Formulation of Models

1	Rate Equations	3
1.1	The Motion of Particles	4
1.2	Chemical Reaction Kinetics	5
1.3	Ecological and Biological Models	8
1.4	One-Dimensional Phase-Line Dynamics	10
1.5	Two-Dimensional Phase Plane Analysis	12
1.5.1	Nullclines	16
1.6	Further Directions	18
1.7	Exercises	19
2	Transport Equations	23
2.1	The Reynolds Transport Theorem	24
2.2	Deriving Conservation Laws	26
2.3	The Linear Advection Equation	28
2.4	Systems of Linear Advection Equations	30
2.5	The Method of Characteristics	32
2.6	Shocks in Quasilinear Equations	34
2.7	Further Directions	39
2.8	Exercises	39
3	Variational Principles	47
3.1	Review and Generalisation from Calculus	47
3.1.1	Functionals	49
3.2	General Approach and Basic Examples	50
3.2.1	The Simple Shortest Curve Problem	51
3.2.2	The Classic Euler–Lagrange Problem	55
3.3	The Variational Formation of Classical Mechanics	56
3.3.1	Motion with Multiple Degrees of Freedom	58

3.4	The Influence of Boundary Conditions	59
3.4.1	Problems with a Free Boundary	59
3.4.2	Problems with a Variable Endpoint	60
3.5	Optimisation with Constraints.	63
3.5.1	Review of Lagrange Multipliers	63
3.6	Integral Constraints: Isoperimetric Problems	65
3.7	Geometric Constraints: Holonomic Problems	67
3.8	Differential Equation Constraints: Optimal Control	69
3.9	Further Directions	73
3.10	Exercises	74
4	Dimensional Scaling Analysis	85
4.1	Dimensional Quantities	85
4.1.1	The SI System of Base Units	86
4.2	Dimensional Homogeneity	87
4.3	The Process of Nondimensionalisation.	88
4.3.1	Projectile Motion	88
4.3.2	Terminal Velocity of a Falling Sphere in a Fluid	91
4.3.3	The Burgers Equation	95
4.4	Further Applications of Dimensional Analysis	98
4.4.1	Projectile Motion (Revisited)	98
4.4.2	Closed Curves in the Plane	100
4.5	The Buckingham Pi Theorem.	101
4.5.1	Mathematical Consequences.	102
4.5.2	Application to the Quadratic Equation.	103
4.6	Further Directions	104
4.7	Exercises	105
 Part II Solution Techniques		
5	Self-Similar Scaling Solutions of Differential Equations	113
5.1	Finding Scaling-Invariant Symmetries	114
5.2	Determining the Form of the Similarity Solution.	115
5.3	Solving for the Similarity Function	117
5.4	Further Comments on Self-Similar Solutions	118
5.5	Similarity Solutions of the Heat Equation	118
5.5.1	Source-Type Similarity Solutions	119
5.5.2	The Boltzmann Similarity Solution	120
5.6	A Nonlinear Diffusion Equation	121
5.7	Further Directions	122
5.8	Exercises	123

6	Perturbation Methods	127
6.1	Asymptotic Analysis: Concepts and Notation	127
6.2	Asymptotic Expansions	129
6.2.1	Divergence of Asymptotic Expansions	130
6.3	The Calculation of Asymptotic Expansions	132
6.3.1	The Expansion Method	133
6.3.2	The Iteration Method	134
6.3.3	Further Examples	136
6.4	A Regular Expansion for a Solution of an ODE Problem	138
6.5	Singular Perturbation Problems	139
6.5.1	Rescaling to Obtain Singular Solutions	141
6.6	Further Directions	142
6.7	Exercises	143
7	Boundary Layer Theory	147
7.1	Observing Boundary Layer Structure in Solutions	148
7.2	Asymptotics of the Outer and Inner Solutions	150
7.3	Constructing Boundary Layer Solutions	153
7.3.1	The Outer Solution	154
7.3.2	The Distinguished Limits	155
7.3.3	The Inner Solution	156
7.3.4	Asymptotic Matching	157
7.3.5	The Composite Solution	157
7.4	Further Examples	158
7.5	Further Directions	162
7.6	Exercises	163
8	Long-Wave Asymptotics for PDE Problems	167
8.1	The Classic Separation of Variables Solution	167
8.2	The Dirichlet Problem on a Slender Rectangle	170
8.3	The Insulated Wire	174
8.4	The Nonuniform Insulated Wire	177
8.5	Further Directions	179
8.6	Exercises	180
9	Weakly-Nonlinear Oscillators	185
9.1	Review of Solutions of the Linear Problem	186
9.2	The Failure of Direct Regular Expansions	187
9.3	Poincare–Lindstedt Expansions	189
9.4	The Method of Multiple Time-Scales	191
9.5	Further Directions	194
9.6	Exercises	195

10 Fast/slow Dynamical Systems	201
10.1 Strongly-Nonlinear Oscillators: The van der Pol Equation	202
10.2 Complex Chemical Reactions: The Michaelis-Menten Model	206
10.3 Further Directions	210
10.4 Exercises	210
11 Reduced Models for PDE Problems	215
11.1 The Method of Moments	215
11.2 Turing Instability and Pattern Formation	219
11.3 Taylor Dispersion and Enhanced Diffusion.	223
11.4 Further Directions	228
11.5 Exercises	228
Part III Case Studies	
12 Modelling in Applied Fluid Dynamics	235
12.1 Lubrication Theory	235
12.2 Dynamics of an Air Bearing Slider	240
12.3 Rivulets in a Wedge Geometry	244
12.3.1 Imbibition in a Vertical Wedge.	246
12.3.2 Draining in a Vertical Wedge.	248
Epilogue	251
Appendix A: Trigonometric Identities and Fourier Series	253
Solutions to Selected Problems	255
References	299
Index	303

Methods of Mathematical Modelling

Continuous Systems and Differential Equations

Witelski, Th.; Bowen, M.

2015, XVIII, 305 p. 50 illus., 45 illus. in color., Softcover

ISBN: 978-3-319-23041-2
