Classes of Infinitely Divisible Distributions and Examples	1
Makoto Maejima	
1 Introduction	1
2 Preliminaries	3
2.1 Infinitely Divisible Distributions on \mathbb{R}^d	3
2.2 Stochastic Integrals with Respect to Lévy Processes	5
3 Some Known Classes of Infinitely Divisible Distributions	7
3.1 Completely Monotone Functions	7
3.2 The Classes of Stable and Semi-stable Distributions	8
3.3 Some Known Classes of Infinitely Divisible Distributions	8
3.4 Relationships Among the Classes	11
4 Stochastic Integral Mappings and Characterizations of Classes (I)	14
4.1 Six Stochastic Integral Mappings	14
4.2 Characterization of Classes as the Ranges of the Mappings	17
5 Stochastic Integral Mappings and Characterizations of Classes (II)	18
5.1 Φ_α -Mapping	19
5.2 $\Psi_{\alpha,\beta}$ -Mapping	22
5.3 $\Phi_{(b)}$ -Mapping	23
5.4 Stable Mapping	24
6 Compositions of Stochastic Integral Mappings	25
7 Nested Subclasses of Classes of Infinitely Divisible Distributions	33
7.1 Iteration of Mappings	33
7.2 Definitions and Some Properties of Nested Subclasses	35
7.3 Limits of Nested Subclasses	37
7.4 Limits of the Iterations of Stochastic Integral Mappings	38
7.5 Characterizations of Some Nested Subclasses	39
7.6 Some Nested Subclasses Appearing in Finance	40
7.7 Nested Subclasses of $L(\mathbb{R}^d)$ with Continuous Parameter	41
8 Examples (I)	41
8.1 Gamma, χ^2 -, Student t- and F -Distributions	41
8.2 Logarithm of Gamma Random Variable	43

8.3	Symmetrized Gamma Distribution	43
8.4	More Examples Related to Gamma Random Variables	43
8.5	Tempered Stable Distribution	45
8.6	Limits of Generalized Ornstein-Uhlenbeck Processes (Exponential Integrals of Lévy Processes)	45
8.7	Type S Random Variable	46
8.8	Convolution of Symmetric Stable Distributions of Different Indexes	48
8.9	Product of Independent Standard Normal Random Variables.....	48
9	Examples (II)	48
9.1	Examples in $L(\mathbb{R})$	48
9.2	Examples in $L_1(\mathbb{R}_+)$	49
9.3	Examples in $B(\mathbb{R})$	49
9.4	Examples in $G(\mathbb{R})$	50
9.5	Examples in $T(\mathbb{R})$	50
9.6	Examples in $T(\mathbb{R}) \cap L_1(\mathbb{R})^c$ (Revisited)	51
10	Examples (III)	51
10.1	The Rosenblatt Process and the Rosenblatt Distribution	51
10.2	The Duration of Bessel Excursions Straddling Independent Exponential Times	54
10.3	Continuous State Branching Processes with Immigration.....	55
10.4	Lévy Density of Inverse Local Time of Some Diffusion Processes.....	56
10.5	GGCs in Finance	57
11	Examples of α -Selfdecomposable Distributions	58
11.1	The First Example	58
11.2	The Second Example.....	59
12	Fixed Points of Stochastic Integral Mappings: A New Sight of $S(\mathbb{R}^d)$ and Related Topics	60
