1	Introduction	1
	Reference	3
2	Some Basic Tools	5
2.1	Some Important Lemmas	5
2.2	Semi-Fredholm Operators	9
2.3	Analytic Maps	11
2.3.1	Definitions and General Properties	11
2.3.2	Composition of Analytic Maps	13
2.3.3	Nemytskii Type Operators on a Banach Algebra	15
2.3.4	Inverting Analytic Maps	16
	References	17
3	Background Results on Evolution Equations	19
3.1	Elements of Functional Analysis. Examples of Unbounded Operators	19
3.1.1	Unbounded Operators on X	19
3.1.2	The Case Where X Is a Hilbert Space	20
3.1.3	Examples in the Theory of PDE	21
3.2	The Semi-group Generated by m -Dissipative Operators. The Hille-Yosida-Phillips Theorem	22
3.2.1	The General Case	22
3.2.2	Two Important Special Cases	23
3.3	Semilinear Problems	24
3.4	A Semilinear Heat Equation	25
3.5	A Semilinear Wave Equation with a Linear Dissipative Term	26
	References	28

4	Uniformly Damped Linear Semi-groups	29
4.1	A General Property of Linear Contraction Semi-groups	29
4.2	The Case of the Heat Equation	29
4.3	The Case of Linearly Damped Wave Equations	32
5	Generalities on Dynamical Systems	37
5.1	General Framework	37
5.2	Some Easy Examples	40
5.3	Convergence and Equilibrium Points	41
5.4	Stability of Equilibrium Points	42
6	The Linearization Method in Stability Analysis	45
6.1	A Simple General Result	45
6.2	The Classical Liapunov Stability Theorem	47
6.2.1	A Simple Proof of the Classical Liapunov Stability Theorem	47
6.2.2	Implementing Liapunov's First Method	48
6.2.3	Remarks on Liapunov's Original Proof of the Stability Theorem	50
6.3	Exponentially Damped Systems Governed by PDE	52
6.3.1	Simple Applications	52
6.3.2	Exponentially Stable Positive Solutions of a Heat Equation	53
6.4	Linear Instability and Bellman's Approach	56
6.4.1	The Finite Dimensional Case	56
6.4.2	An Abstract Instability Result	59
6.4.3	Application to the One-Dimensional Heat Equation	61
6.5	Other Infinite-Dimensional Systems	62
	References	64
7	Gradient-Like Systems	67
7.1	A Simple General Property	67
7.2	A Minimal Differential Criterion	68
7.3	The Case of Gradient Systems	69
7.4	A Class of Second Order Systems	70
7.5	Application to the Semi-linear Heat Equation	71
7.6	Application to a Semilinear Wave Equation with a Linear Damping	72
	References	75
8	Liapunov's Second Method and the Invariance Principle	77
8.1	Liapunov's Second Method	77
8.2	Asymptotic Stability Obtained by Liapunov Functions	79
8.3	The Barbashin-Krasovski-LaSalle Criterion for Asymptotic Stability	83
8.4	The General Lasalle's Invariance Principle	84

8.5	Application to Some Differential Systems in $\mathbb{R}^N$	86
8.6	Two Infinite Dimensional Examples	89
	References	90
9	Some Basic Examples	91
9.1	Scalar First Order Autonomous ODE.	91
9.2	Scalar Second Order Autonomous ODE.	91
9.2.1	A Convergence Result	92
9.2.2	A Non Convergence Result	94
9.3	Contractive and Unconditionally Stable Systems	95
9.4	The Finite Dimensional Case of a Result Due to Alvarez.	98
	References	99
10	The Convergence Problem in Finite Dimensions	101
10.1	A First Order System.	101
10.1.1	A Non Convergence Result	101
10.1.2	The Analytic Case.	103
10.2	A Second Order System.	105
10.2.1	A Non Convergence Result	105
10.2.2	A Convergence Result	106
10.3	Generalization.	108
10.3.1	A Gradient System in Finite Dimensions	109
10.3.2	A Second Order Ordinary Differential System.	110
10.3.3	A Second Order Gradient Like System with Nonlinear Dissipation	112
	References	114
11	The Infinite Dimensional Case	115
11.1	Analytic Functions and the Łojasiewicz Gradient Inequality	116
11.2	An Abstract Łojasiewicz Gradient Inequality	117
11.3	Two Abstract Convergence Results	123
11.4	Examples	128
11.4.1	A Semilinear Heat Equation	128
11.4.2	A Semilinear Wave Equation	130
	References	131
12	Variants and Additional Results	133
12.1	Convergence in Natural Norms.	133
12.2	Convergence Without Growth Restriction for the Heat Equation	134
12.3	More General Applications.	134
12.3.1	Systems	134
12.3.2	Fourth Order Operators	135
12.4	The Wave Equation with Nonlinear Damping.	136
12.5	Some Explicit Decay Rates Under Additional Conditions.	136
12.6	More Information About Decay Rates	137

12.7 The Asymptotically Autonomous Case.	137
12.8 Non Convergence for Heat and Wave Equations.	137
References	138
