1	Image-Based Closed-Loop Control of Molecular Dynamics: Controlling Strong-Field Dissociative-Ionization Pathways	1
	G.-Y. Chen, J. Lee, H. Jang, D.B. Foote and W.T. Hill III	
1.1	Introduction	2
1.2	Experimental Setup and Tools	3
1.2.1	Pulse Characterization	4
1.2.2	Image Spectrometer	5
1.2.3	GA Search Approach	7
1.2.4	Channel Fingerprinting	8
1.3	GA Control of CO ₂ Bending Amplitude	12
1.4	Discussion	15
1.4.1	GA-Solution for Bending Enhancement	16
1.4.2	Suboptimal Solutions	17
1.5	Conclusion	18
	References	19
2	Classical Trajectory Methods for Simulation of Laser-Atom and Laser-Molecule Interaction	21
	Erik Lötstedt, Tsuyoshi Kato, Katsumi Midorikawa and Kaoru Yamanouchi	
2.1	Introduction	21
2.2	Theoretical Methods	24
2.3	Fermionic Molecular Dynamics	26
2.3.1	Inner-Shell Electron Ejection in a Laser-Driven Carbon Atom	28
2.3.2	D ₃ ⁺ in an Intense Laser Field	30
2.4	Purely Classical Models	32
2.4.1	Soft-Core Model of H ₃ ⁺	33
2.4.2	Magnetic Field Effects in Non-sequential Double Ionization	34

2.4.3	Nuclear Reaction Induced by Proton Recollision	37
2.5	Summary	39
	References	40
3	Nonadiabatic Molecular Alignment and Orientation	45
	Hirokazu Hasegawa and Yasuhiro Ohshima	
3.1	Introduction	45
3.2	Non-adiabatic Molecular Alignment and Orientation	46
3.2.1	Interaction Potential	46
3.2.2	Rotational Wave Packet	48
3.2.3	Evaluation of the NAMA and NAMO	50
3.3	Experimental Techniques to Pursue Rotational Wave Packet Dynamics	51
3.3.1	Real Time Measurement.	52
3.3.2	Rotational Population of the Wave Packet in Frequency Domain	52
3.3.3	Relative Phase of the Wave Packet	54
3.3.4	The Left-Handed and Right-Handed Rotational Motion of the Wave Packet	58
3.4	Summary	59
	References	59
4	Dynamics of Atomic Clusters Under Intense Femtosecond Laser Pulses	65
	Gaurav Mishra and N.K. Gupta	
4.1	Introduction	65
4.2	Fundamental Processes Occurring in Laser Driven Clusters.	68
4.2.1	Nanoplasma Model	70
4.2.2	Modifications to Nanoplasma Model	71
4.2.3	Non-linear Models.	72
4.2.4	Particle-Particle/Particle-Mesh Models	73
4.3	Molecular Dynamic Simulations	73
4.3.1	Basic Model.	73
4.3.2	Anisotropic Ion Emission	74
4.3.3	Carrier-Envelope Phase Effects	79
4.3.4	Neutron Generation from Deuterium Clusters	81
4.4	Summary and Conclusions	84
	References	85
5	Backward Lasing of Femtosecond Plasma Filaments	89
	Yi Liu, Sergey Mitryukovskiy, Pengji Ding, Guillaume Point, Yohann Brelet, Aurélien Houard, Arnaud Couaïron and André Mysyrowicz	
5.1	Introduction	90
5.2	Experimental Setup	91

5.3	Backward Lasing Emission from Laser Plasma Filaments	93
5.3.1	Backward Stimulated UV Emission from Filaments in Nitrogen Gas	93
5.3.2	Forward ASE from Filaments in Pure Nitrogen	95
5.3.3	Backward Emission at 337 nm from Filament in Air	96
5.3.4	Discussion of the Population Inversion Mechanism	97
5.4	External Seeded Backward Lasing from Filaments	99
5.5	Conclusion	102
	References	102
6	Propagation of Ultrashort, Long Wavelength Laser Pulses.	105
	Jayashree A. Dharmadhikari, Deepak Mathur and Aditya K. Dharmadhikari	
6.1	Introduction	105
6.2	Propagation in Transparent Solids	110
6.2.1	Supercontinuum Generation	110
6.2.2	Filamentation	115
6.2.3	Estimation of Multiphoton Absorption Cross-Section in BaF ₂	116
6.3	Propagation in Water	117
6.4	Propagation in Air	120
6.5	An Application in the Life Sciences: DNA Damage	121
6.6	Summary	123
	References	123
7	Dense Matter States Produced by Laser Pulses	127
	Hiroaki Nishimura and Dimitri Batani	
7.1	Introduction	127
7.2	Production of Extreme States of Matter with Laser-Driven Shock Waves	130
7.3	An Example: High-Pressure Equation of State of Carbon	134
7.4	Isochoric Heating.	136
7.5	Creation of WDM with Hot Electrons	138
7.6	Creation of WDM with Radiation	139
7.7	Physics of Isochoric Heating with Laser-Driven Hot Electrons.	140
7.7.1	1D Simulation.	143
7.7.2	2D Simulation.	145
7.8	Conclusions	147
	References	147
8	Laser-Plasma Particle Sources for Biology and Medicine	151
	Antonio Giulietti, Giancarlo Bussolino, Lorenzo Fulgentini, Petra Koester, Luca Labate and Leonida A. Gizzi	
8.1	Introduction	152

8.2	Radiobiology with Protons and Ions from Laser-Based Sources	155
8.2.1	Present RF-Driven Versus Future Laser-Driven Devices (Protons and Ions).	155
8.2.2	Laser-Based Ion Acceleration Schemes Suitable for Medical Applications	157
8.2.3	Laser Upgrading to Catch Suitable Ion Beam Energy.	162
8.2.4	Radiobiology with Present Laser-Produced Ion Beams	163
8.2.5	Laser-Driven Ion Microscopy	164
8.3	Laser-Driven Electron Acceleration Towards Medical Applications	164
8.3.1	Present RF-Driven Versus Possible Laser-Driven Devices (Electrons and Photons).	166
8.3.2	High Efficiency Laser-Driven Electron Acceleration to Relativistic Energies.	167
8.3.3	Sub-relativistic Electron Sources	169
8.4	Radiological Use of Electron Bunches from Laser-Plasmas	171
8.4.1	Ionizing Electron Bunches for Biological Tests and Advanced Dosimetry	171
8.4.2	“Femto-Nano” Scale Radiobiology	172
8.4.3	Laser-Driven Electron Radiography	174
8.5	Conclusions	175
	References	176
9	Observation of Ultrafast Photoinduced Dynamics in Strongly Correlated Organic Materials.	179
	Ken Onda	
9.1	Introduction	179
9.2	Overall Process of PIPT and Observation Techniques.	180
9.3	Assignment of the Photoinduced Phase.	182
9.4	The Initial Process of PIPT Using Pulse Compression Techniques	186
9.5	Observation of Ultrafast Structural Change	188
9.5.1	Time-Resolved Vibrational Spectroscopy	188
9.5.2	Time-Resolved Electron Diffraction	193
9.6	Observation of Domain Structure Change Using Time-Resolved Microscopy.	196
9.7	Concluding Remarks	199
