

Contents

1	Lagrange and Foundations for the Calculus	1
1.1	Introduction	1
1.2	The Calculus c. 1800.	1
1.3	Joseph Louis Lagrange	4
1.4	Lagrange on the Foundations of the Calculus	6
1.5	The Infinitely Small and the Infinitely Large	8
2	Joseph Fourier	13
2.1	Introduction	13
2.2	Fourier's Career	14
2.3	Fourier and Series of Sines and Cosines	15
3	Legendre and Elliptic Integrals	21
3.1	Introduction	21
3.2	Legendre's Career	22
3.3	Elliptic Integrals	22
3.4	Exercises	31
4	Cauchy and Continuity	33
4.1	Introduction	33
4.2	The Young Cauchy	34
4.3	Cauchy and Continuity	35
4.4	Abel's 'Exception' and Cauchy's Series	45
5	Cauchy: Differentiation and Integration	49
5.1	Introduction	49
5.2	Cauchy's Criticisms	49
5.3	Cauchy's Definitions	51
6	Cauchy and Complex Functions to 1830	59
6.1	Introduction	59
6.2	'The Passage from the Real to the Imaginary'	59

6.3	Cauchy, Double Integrals, and Integrals Round a Rectangle . . .	61
6.4	Exercises	68
7	Abel	69
7.1	Introduction	69
7.2	The Prize of 1830	70
7.3	Abel and his Travels	72
7.4	Abel on Elliptic Functions	74
8	Jacobi	79
8.1	Introduction	79
8.2	Jacobi and the Transformations of Elliptic Integrals.	80
8.3	Abel and Jacobi as Rivals	83
8.4	Jacobi's <i>Fundamenta Nova</i>	85
8.5	Elliptic Functions and Complex Functions	88
8.6	Two Applications	90
9	Gauss	95
9.1	Introduction	95
9.2	Lemniscatic Functions	96
9.3	The Arithmetico-Geometric Mean	98
9.4	Elliptic Integrals	100
9.5	Gauss and Complex Functions	101
9.6	Exercises	104
10	Cauchy and Complex Function Theory, 1830–1857	105
10.1	Introduction	105
10.2	Complex Functions and Power Series Expansions	105
10.3	Laurent's Theorem	108
10.4	Cauchy's Path to the Cauchy–Riemann Equations.	109
10.5	Final Stages	111
10.6	A Summary of Cauchy's Ideas on Complex Analysis	112
11	Complex Functions and Elliptic Integrals	115
11.1	Introduction	115
11.2	Liouville and His Student Hermite	116
11.3	Liouville on His Theorem for Doubly Periodic Functions.	118
11.4	Doubly Periodic Functions and Complex Functions.	120
12	Revision	123
13	Gauss, Green, and Potential Theory	131
13.1	Introduction	131
13.2	Potential Theory	131
13.3	Gauss	134
13.4	Green	137

14	Dirichlet, Potential Theory, and Fourier Series.	143
14.1	Introduction	143
14.2	Dirichlet's Career	144
14.3	Dirichlet and Potential Theory	145
14.4	Dirichlet and Fourier Series	146
15	Riemann.	153
15.1	Introduction	153
15.2	Lipschitz	154
15.3	Riemann	154
15.4	Riemann's Publications	155
15.5	Riemann's Paper on Trigonometric Series	156
15.6	Riemann's Function	161
15.7	Exercises	163
16	Riemann and Complex Function Theory	165
16.1	Introduction	165
16.2	The Doctoral Dissertation of 1851.	165
16.3	Harmonic Functions	167
16.4	Riemann's Defence of the Dirichlet Principle	169
16.5	The Riemann Mapping Theorem.	171
16.6	Reactions to the Paper of 1851.	172
16.7	Riemann Surfaces and Conformal Maps.	173
17	Riemann's Later Complex Function Theory.	175
17.1	Introduction	175
17.2	Riemann's Lectures from 1855/56 to 1861/62.	175
17.3	Riemann's Theory of Elliptic Functions.	178
17.4	Riemann's Paper of 1857 and Complex Functions.	181
18	Responses to Riemann's Work	185
18.1	Introduction	185
18.2	Critical Acceptance	185
18.3	Prym Refutes the Dirichlet Principle	186
18.4	Other Responses	189
18.5	Complex Algebraic Geometry.	193
18.6	Exercises	194
19	Weierstrass.	195
19.1	Introduction	195
19.2	Weierstrass's Early Years.	196
19.3	Weierstrass in Berlin	200
19.4	Weierstrass's Programme of Lectures	202
19.5	Introductions to the Theory of Analytic Functions.	205

20	Weierstrass's Foundational Results	207
20.1	Introduction	207
20.2	Poles and Essential Singularities	207
20.3	Natural Boundaries	208
20.4	Disjoint Domains and Non-differentiable Functions	209
20.5	Advanced Results	214
21	Revision—and Assessment	217
22	Uniform Convergence	219
22.1	Introduction	219
22.2	Seidel	220
22.3	Björling	221
22.4	Gudermann and Weierstrass	222
22.5	Stokes	223
22.6	Summary	225
23	Integration and Trigonometric Series	227
23.1	Introduction	227
23.2	Heine, Cantor, and Nowhere Dense Sets	227
23.3	Assumptionless Functions	229
23.4	Beyond Uniformity	233
23.5	Weierstrass	236
24	The Fundamental Theorem of the Calculus	239
24.1	Introduction	239
24.2	Bernhard Bolzano	239
24.3	Non-differentiable Functions	241
24.4	Exercises	251
25	The Construction of the Real Numbers	253
25.1	Introduction	253
25.2	Weierstrass's Ideas	253
25.3	Dedekind's Construction of the Real Numbers	255
25.4	The Ideas of Heine and Cantor	256
25.5	Other Theories	257
26	Implicit Functions	259
26.1	Introduction	259
26.2	Power Series and Implicit Functions	259
26.3	Cauchy	261
26.4	Dini	267
26.5	Conclusions	268
27	Towards Lebesgue's Theory of Integration	271
27.1	Introduction	271
27.2	Problems	271
27.3	The Area of Surfaces	275

27.4	Lebesgue's Answers	277
27.5	Exercises	281
28	Cantor, Set Theory, and Foundations	283
28.1	Introduction	283
28.2	The Continuum.	284
28.3	The Line and the Square	284
28.4	Transfinite Ordinals.	285
28.5	The Continuum Hypothesis	286
28.6	The Paradoxes of Set Theory	287
29	Topology	289
29.1	Introduction	289
29.2	The Jordan Curve Theorem	289
29.3	The Problem of Dimension	292
29.4	Osgood's Theorem: Curves with Finite Area	292
29.5	Concluding Remarks	294
30	Assessment	295
	Appendix A: Papers in Translation	297
	Appendix B: Series of Functions	325
	Appendix C: Potential Theory: A Mathematical Summary	329
	References	335
	Index	347

The Real and the Complex: A History of Analysis in the
19th Century

Gray, J.J.

2015, XVI, 350 p. 71 illus., Softcover

ISBN: 978-3-319-23714-5
