

Contents

- 1 Introduction** 1
 - References 3
- 2 State of the Art** 5
 - 2.1 Characterisation of Rockfalls 5
 - 2.2 Towards Characterizing Rock Mass: Influencing Parameters and Classifications 6
 - 2.2.1 The Mechanics of Failure Preparation and Causes 9
 - 2.2.2 Critical Fracture Propagation (Progressive Failure) and Triggers 12
 - 2.2.3 Rockfall Run-Out Modelling Approaches 16
 - 2.3 Key Questions and Research Gap 22
 - References 23
- 3 Study Site** 27
 - 3.1 Geographical Setting 27
 - 3.2 Geological Setting 27
 - References 31
- 4 Methodology** 33
 - 4.1 Case Study: Potential Planar Rock-Slide at the Wachterl-Horn . . . 33
 - 4.1.1 Field Investigation of the Planar Rockslide 33
 - 4.1.2 Recording of the Shear Parameters at the Failure Surface 34
 - 4.1.3 Uniaxial Compressive Strength Tests 36
 - 4.1.4 Determination of Density 38
 - 4.1.5 Limit Equilibrium Analysis 38
 - 4.1.6 Reconstruction of a Potential Mode of Failure 40
 - 4.1.7 Monitoring of the Critical Block: Installation of Strain Gauges 40

4.2	Quantitative Magnitude Assessment	41
4.2.1	Scanline Analysis	41
4.2.2	Joint Systems and Kinematic Analysis	43
4.2.3	Quantitative Evaluation of Block Dimensions at the Talus Slope	44
4.3	3D Rockfall Modelling	46
4.3.1	Determination of the Homogenous Areas Based on Field Investigation	46
4.3.2	Rocky for 3D	48
4.3.3	RAMMS::Rockfall	52
	References	55
5	Results	57
5.1	Case Study: Potential Planar Rock-Slide at the Wachterl-Horn . . .	57
5.1.1	Field Investigation of the Critical Block and Its Vicinity	57
5.1.2	Recording of the Shear Parameters at the Failure Surface	60
5.1.3	Uniaxial Compressive Strength Tests	62
5.1.4	Determination of Density	62
5.1.5	Limit Equilibrium Analysis	63
5.1.6	Reconstruction of a Potential Mode of Failure	64
5.1.7	Installation of Strain Gauges	67
5.2	Quantitative Magnitude Assessment	68
5.2.1	Scanline Analysis	68
5.2.2	Kinematic Analysis	70
5.2.3	Counting of Block Axes at the Talus Slope	72
5.3	Rockfall Modelling	76
5.3.1	Rocky for 3D	76
5.3.2	RAMMS::Rockfall	98
