

Contents

1 Styrene: An Introduction	1
1.1 Distribution of Styrene	1
1.2 Physicochemical Properties of Styrene	2
1.3 Toxicology and Environmental Fate of Styrene	3
1.4 Motivations to Study Styrene from a Bioperspective	4
References	5
2 Pathways for the Degradation of Styrene	7
2.1 Styrene-Degrading Microorganisms	7
2.2 Aerobic Styrene Metabolism	9
2.2.1 Vinyl Side-Chain Oxidation (Upper Styrene-Degrading Pathway)	10
2.2.2 Phenylacetic Acid Catabolism (Lower Styrene-Degrading Pathway)	11
2.2.3 Direct Ring Cleavage of Styrene	12
2.2.4 Alternative Routes to Mineralize or Transform Styrene	14
2.3 Anaerobic Routes for Styrene Degradation	15
2.4 Biotransformation of Substituted Styrene Compounds	16
2.5 Styrene Transformation in Humans	17
References	18
3 Molecular Genetics of Styrene Degrading Routes	23
3.1 The <i>Sty</i> -Operon of the Upper Styrene Degradation Pathway	23
3.2 Regulatory Elements of the <i>Sty</i> -Operon and <i>Sty</i> -Gene Expression	25
3.2.1 Proteins of the Two-Component Regulator StySR	26
3.2.2 Styrene-Induced Transcription of <i>Sty</i> -Genes	28
3.3 Localization and Mobility of <i>Sty</i> -Genes	30
3.4 Styrene Monooxygenases Distant from <i>Sty</i> -Operons	31

3.5	Other Styrene Catabolic Activities and Operons	33
3.5.1	Direct Ring Cleavage of Styrene via <i>Meta</i> -Cleavage Routes	33
3.5.2	The Phenylacetyl-CoA Catabolon	33
	References	38
4	Selected Enzymes of Styrene Catabolism	43
4.1	Styrene Monooxygenase	43
4.1.1	The Two Types of Styrene Monooxygenases	44
4.1.2	Insights into Structure and Mechanism of SMOs	46
4.2	Styrene Oxide Isomerase	51
4.2.1	Mechanism of Substrate Isomerization	52
4.2.2	SOI—A Membrane-Embedded Enzyme?	53
4.3	Phenylacetaldehyde Dehydrogenase	55
4.4	Phenylacetaldehyde Reductase	56
4.5	Epoxide Hydrolase	57
	References	58
5	Biotechnological Applications of Styrene-Degrading Microorganisms or Involved Enzymes	65
5.1	Styrene Monooxygenase, a Versatile and Powerful Biocatalyst	66
5.2	Biotechnological Potential of Styrene Oxide Isomerase	69
5.3	Phenylacetaldehyde Reductase in Biocatalysis	69
5.4	Epoxide Hydrolases Produce Chiral Diols or Remain Chiral Epoxides	71
5.5	Other Enzymes Acting on Styrene and Its Derivatives	72
5.6	Production of Valuable Compounds Employing Enzymatic Cascades	76
5.6.1	Styrene-Degrading Bacteria Produce Phenylacetic Acids	76
5.6.2	Production of Phenylacetic Acids by Recombinant Biocatalysts	77
5.6.3	Biosynthesis of Catechol Derivatives with <i>Rhodococcus</i>	78
5.6.4	Production of 4-Hydroxystyrene	78
5.7	Applying Biomass for Waste Treatment	80
5.8	Biopolymer Production	81
5.9	Biosensors	81
	References	82
6	Conclusions and Future Perspectives	89
6.1	Microbial Styrene Degradation and Its Open Questions	89
6.2	Application of Whole-Cells in Biocatalysis	93
6.3	Styrene Monooxygenases and Future Expectations	96
6.3.1	Sulfoxidation as the Promising Application	96
6.3.2	Structural and Mechanistic Questions	97

6.3.3	Evolution of Styrene Monooxygenases	98
6.3.4	StyA1 and StyA2B—Origin and Physiological Role.	99
6.4	Styrene Oxide Isomerase in Biocatalysis	99
6.5	Enzymes with an Enigmatic Background	101
	References	102

Microbial Styrene Degradation

Tischler, D.

2015, XIV, 108 p. 21 illus., 6 illus. in color., Softcover

ISBN: 978-3-319-24860-8
