John Weaver

Purdue University

Amir Yazdaniyaz

ARUP

Ted Zsirai

HDR Architecture, Inc.

The information in this document is derived in part from a series of workshops which were jointly sponsored by the National Institute of Standards and Technology, the Office of Naval Research, and the U.S. Department of Energy. Additional sponsorship was provided by Arizona State University, Purdue University, and HDR Architecture, Inc. We wish to thank all the participants at each of these three Buildings for Advanced Technology (BAT) workshops, held January 14–16, 2003, at the National Institute of Standards and Technology in Gaithersburg, MD; January 21–23, 2004, at Arizona State University, Mesa, AZ; and February 7–8, 2006, at Purdue University in West Lafayette, IN. The presentations and discussions at these workshops, supplemented by input from building design professionals and more recent literature, make up much of the content of this document. Special thanks to those experts who contributed much of the incorporated information.

Special thanks to Geoff Holdridge, Ellen Randall, Cheryl David-Fordyce, and Pat Johnson for their editing of the report.

Buildings for Advanced Technology
