

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Stability, Resonance, and Lyapunov Inequalities	1
1.2	Overview of the Book	5
	References	6
<b>2</b>	<b>A Variational Characterization of the Best Lyapunov Constants</b>	9
2.1	Neumann Boundary Conditions, As a Paradigm of Linear Resonant Problems	9
2.2	Nonlinear Neumann Problems	23
2.3	The Variational Method for Other Boundary Conditions	28
2.4	Disfocality	34
	References	44
<b>3</b>	<b>Higher Eigenvalues</b>	47
3.1	Motivation of the Problem: Neumann and Dirichlet Boundary Conditions	47
3.2	Periodic and Antiperiodic Boundary Conditions	55
3.3	The $n$ th Stability Zone of Linear Periodic Equations	58
3.4	Nonlinear Problems	60
3.5	Disfocality at Higher Eigenvalues	62
	References	67
<b>4</b>	<b>Partial Differential Equations</b>	69
4.1	$L_1$ -Lyapunov Inequality is Meaningless for PDEs	69
4.2	$L_p$ -Lyapunov Inequalities	70
4.2.1	The Subcritical Case	72
4.2.2	The Critical Case	74
4.2.3	The Supercritical Case	75
4.2.4	Qualitative Properties of $\beta_p$	79
4.3	Nonlinear Problems	80

4.4	Radial Higher Eigenvalues .....	82
4.4.1	The Subcritical Case.....	85
4.4.2	The Critical Case .....	89
4.4.3	The Supercritical Case.....	91
	References .....	92
<b>5</b>	<b>Systems of Equations</b> .....	<b>95</b>
5.1	Motivation and the Meaning of Lyapunov Inequalities for Systems of Equations .....	95
5.2	Neumann and Dirichlet Boundary Conditions.....	97
5.3	Periodic and Antiperiodic Boundary Conditions .....	104
5.4	Nonlinear Resonant Problems .....	106
5.5	Stability of Linear Periodic Systems .....	112
5.6	Partial Differential Equations.....	116
	References .....	117
<b>Index</b> .....		<b>119</b>

A Variational Approach to Lyapunov Type Inequalities

From ODEs to PDEs

Cañada, A.; Villegas, S.

2015, XVIII, 120 p., Softcover

ISBN: 978-3-319-25287-2
