Part I Learning Control in Unknown Environments

1	Robot Learning for Persistent Autonomy	3
	Petar Kormushev and Seyed Reza Ahmadzadeh	
1.1	Persistent Autonomy.	3
1.2	Robot Learning Architecture	4
1.3	Learning of Reactive Behavior.	5
1.3.1	Autonomous Robotic Valve Turning.	6
1.3.2	Related Work.	6
1.3.3	Hierarchical Learning Architecture	8
1.3.4	Learning Methodology	8
1.3.5	Imitation Learning	10
1.3.6	Force/Motion Control Strategy	12
1.3.7	Learning of Reactive Behavior Using RFDM.	13
1.3.8	Iterative Learning Control	16
1.4	Learning to Recover from Failures	17
1.4.1	Methodology	18
1.4.2	Fault Detection Module.	19
1.4.3	Problem Formulation.	19
1.4.4	Learning Methodology	20
1.4.5	Experiments.	22
1.5	Conclusion	26
	References	26
2	The Explore–Exploit Dilemma in Nonstationary	
	Decision Making under Uncertainty	29
	Allan Axelrod and Girish Chowdhary	
2.1	Introduction.	29
2.1.1	Decision Making and Control under Uncertainty	
	in Nonstationary Environments.	32

2.2	Case Study 1: Model-Based Reinforcement Learning for Nonstationary Environments	33
2.2.1	Gaussian Process Regression and Clustering	34
2.2.2	GP-NBC-MBRL Solution to Nonstationary MDPs	37
2.2.3	Example Experiment	37
2.2.4	Summary of Case Study 1	40
2.3	Case Study 2: Monitoring Spatiotemporally Evolving Processes using Unattended Ground Sensors and Data-Ferrying UAS	40
2.3.1	Connecting the FoW Functional to Data	41
2.3.2	Problem Definition	42
2.3.3	Solution Methods	44
2.3.4	Simulation Results	47
2.3.5	Summary of Case Study 2	50
	References	50
3	Learning Complex Behaviors via Sequential Composition and Passivity-Based Control	53
	Gabriel A.D. Lopes, Esmaeil Najafi, Subramanya P. Nagesh Rao and Robert Babuška	
3.1	Introduction	54
3.2	Sequential Composition	56
3.3	Passivity-Based Control	57
3.3.1	Interconnection and Damping Assignment Passivity-Based Control	58
3.3.2	Algebraic IDA-PBC	59
3.4	Estimating the Domain of Attraction	60
3.5	Learning via Composition	63
3.5.1	Actor–Critic	63
3.5.2	Algebraic Interconnection and Damping Assignment Actor–Critic	64
3.5.3	Sequential Composition Reinforcement Learning Algorithm	64
3.6	An Example Simulation	67
3.7	Conclusions	72
	References	73
4	Visuospatial Skill Learning	75
	Seyed Reza Ahmadzadeh and Petar Kormushev	
4.1	Introduction	75
4.2	Related Work	77

4.3	Introduction to Visuospatial Skill Learning	80
4.3.1	Terminology	81
4.3.2	Problem Statement	81
4.3.3	Methodology	82
4.4	Implementation of VSL	83
4.4.1	Coordinate Transformation.	84
4.4.2	Image Processing	84
4.4.3	Trajectory Generation	86
4.4.4	Grasp Synthesis	88
4.5	Experimental Results	88
4.5.1	Simulated Experiments	88
4.5.2	Real-World Experiments	91
4.6	Conclusions.	97
	References	97

Part II Dealing with Sensing Uncertainty

5	Observer Design for Robotic Systems via Takagi–Sugeno Models and Linear Matrix Inequalities	103
	Víctor Estrada-Manzo, Zsófia Lendek and Thierry-Marie Guerra	
5.1	Introduction.	103
5.2	Preliminaries	105
5.2.1	Descriptor Models of Robotic Systems	105
5.2.2	Takagi–Sugeno Models	107
5.2.3	Linear Matrix Inequalities	111
5.3	Observer Design for TS Descriptor Models	113
5.4	Simulation Example	122
5.5	Summary	126
	References	127
6	Homography Estimation Between Omnidirectional Cameras Without Point Correspondences	129
	Robert Frohlich, Levente Tamás and Zoltan Kato	
6.1	Introduction.	129
6.2	Planar Homography for Central Omnidirectional Cameras	131
6.3	Homography Estimation	133
6.3.1	Construction of a System of Equations	134
6.3.2	Normalization and Initialization	135
6.4	Omnidirectional Camera Models	136
6.4.1	The General Catadioptric Camera Model	136
6.4.2	Scaramuzza’s Omnidirectional Camera Model	138
6.5	Experimental Results	139
6.6	Relative Pose from Homography	143
6.7	Conclusions.	149
	References	149

7	Dynamic 3D Environment Perception and Reconstruction Using a Mobile Rotating Multi-beam Lidar Scanner	153
	Attila Börcs, Balázs Nagy and Csaba Benedek	
7.1	Introduction	154
7.2	3D People Surveillance	156
7.2.1	Foreground-Background Separation.	157
7.2.2	Pedestrian Detection and Multi-target Tracking.	158
7.2.3	Evaluation	160
7.3	Real Time Vehicle Detection for Autonomous Cars	162
7.3.1	Object Extraction by Point Cloud Segmentation	164
7.3.2	Object Level Feature Extraction and Vehicle Recognition	166
7.3.3	Evaluation of Real-Time Vehicle Detection	169
7.4	Large Scale Urban Scene Analysis and Reconstruction	170
7.4.1	Multiframe Point Cloud Processing Framework	171
7.4.2	Experiments.	176
7.5	Conclusion	178
	References	179
8	ROBOSHERLOCK: Unstructured Information Processing Framework for Robotic Perception	181
	Michael Beetz, Ferenc Bálint-Benczédi, Nico Blodow, Christian Kerl, Zoltán-Csaba Márton, Daniel Nyga, Florian Seidel, Thiemo Wiedemeyer and Jan-Hendrik Worch	
8.1	Introduction.	182
8.2	Related Work and Motivation	184
8.3	Overview of ROBOSHERLOCK.	185
8.4	Conceptual Framework	188
8.4.1	Common Analysis Structure (CAS).	188
8.4.2	Analysis Engines in ROBOSHERLOCK	189
8.4.3	Object Perception Type System	192
8.4.4	Integrating Perception Capabilities into ROBOSHERLOCK.	193
8.5	Tracking and Entity Resolution	194
8.6	Information Fusion.	196
8.7	Experiments and Results	199
8.7.1	Illustrative Example	200
8.7.2	Entity Resolution	201
8.7.3	Information Fusion	203
8.8	Conclusion and Future Work	206
	References	206

9	Navigation Under Uncertainty Based on Active SLAM Concepts.	209
	Henry Carrillo and José A. Castellanos	
9.1	Introduction.	209
9.1.1	SLAM	211
9.1.2	Active Mapping	211
9.1.3	Active Localization.	211
9.1.4	Active SLAM	212
9.2	High Level View of General Active SLAM Algorithms	213
9.3	Uncertainty Criteria	214
9.4	Main Paradigms of Active SLAM	216
9.4.1	A First Approach: Local Search Using Optimality Criteria	216
9.4.2	A Second Look: An Information Gain Approach	218
9.4.3	A Third Strategy: Considering Multiple Steps Ahead.	220
9.5	Navigation Under Uncertainty: An Active SLAM Related Application	220
9.5.1	Path Planning in the Belief Space.	221
9.6	Our Approach: Fast Minimum Uncertainty Search Over a Pose Graph Representation	222
9.6.1	Metric Calculation	223
9.6.2	Increasing Traversability	223
9.6.3	Decision Points	223
9.6.4	Decision Graph	224
9.6.5	Searching over the Decision Graph.	225
9.7	Experiments	226
9.7.1	Graph Reduction	227
9.7.2	H_0 : Are the Minimum Uncertainty Path and the Shortest Necessarily Equal?.	227
9.7.3	Timing Comparisons.	228
9.8	Discussion.	229
	References	231
10	Interactive Segmentation of Textured and Textureless Objects	237
	Karol Hausman, Dejan Pangercic, Zoltán-Csaba Márton, Ferenc Bálint-Benczédi, Christian Bersch, Megha Gupta, Gaurav Sukhatme and Michael Beetz	
10.1	Introduction and Motivation	238
10.2	Overview of Interactive Segmentation Processing Steps	241
10.3	Segmentation of Cluttered Tabletop Scene.	241
10.4	Push Point Selection and Validation	242
10.4.1	Contact Points from Concave Corners.	243
10.4.2	Push Direction and Execution	243

10.5	Feature Extraction and Tracking.	244
10.6	Feature Trajectory Clustering.	245
10.6.1	Randomized Feature Trajectory Clustering.	246
10.6.2	Trajectory Clustering Analysis	249
10.6.3	Exhaustive Graph-Based Trajectory Clustering	251
10.7	Stopping Criteria and Finalizing Object Models	252
10.7.1	Verification of Correctness of Segmentation.	253
10.7.2	Dense Model Reconstruction	254
10.8	Results	256
10.8.1	Random Versus Corner-Based Pushing	256
10.8.2	Trajectory Clustering.	257
10.8.3	System Integration and Validation	258
10.9	Conclusions.	260
	References	260

Part III Control of Networked and Interconnected Robots

11	Vision-Based Quadcopter Navigation in Structured Environments	265
	Előd Páll, Levente Tamás and Lucian Buşoniu	
11.1	Introduction.	266
11.2	Quadcopter Structure and Control.	267
11.3	Quadcopter Hardware and Software	268
11.4	Methodological and Theoretical Background	269
11.4.1	Feature Detection	270
11.4.2	Feature Tracking	272
11.5	Approach	278
11.5.1	Software Architecture	278
11.5.2	Quadcopter Initialization	280
11.5.3	Perspective Vision	280
11.5.4	VP Tracking	282
11.5.5	Control	282
11.6	Experiments and Results	284
11.6.1	VP Motion Model Results	285
11.6.2	Nonlinear Estimator Results.	285
11.6.3	Indoor and Outdoor Results	286
11.6.4	Control Results	287
11.7	Summary and Perspectives	289
	References	289

12	Bilateral Teleoperation in the Presence of Jitter:	
	Communication Performance Evaluation and Control	291
	Piroska Haller, Lőrinc Márton, Zoltán Szántó and Tamás Vajda	
12.1	Introduction.	291
12.2	Communication Performance Evaluation for Wireless Teleoperation.	293
12.2.1	The Wireless Communication Medium	293
12.2.2	Implementation of Application Layer Measurements	295
12.2.3	Experimental Measurements.	296
12.3	Control of Bilateral Teleoperation Systems in the Presence of Jitter.	302
12.3.1	Control Approaches to Assure the Stability in Bilateral Teleoperation Systems	302
12.3.2	Bilateral Control Scheme to Deal with Jitter Effects	305
12.3.3	Control Experiments	306
12.4	Conclusions.	309
	References	310
13	Decentralized Formation Control in Fleets of Nonholonomic Robots with a Clustered Pattern	313
	Marcos Cesar Bragagnolo, Irinel-Constantin Morărescu, Lucian Buşoniu and Pierre Riedinger	
13.1	Introduction.	314
13.2	Problem Formulation and Preliminaries.	316
13.2.1	Robot Dynamics and Tracking Error.	317
13.2.2	Network Topology and Agreement Dynamics	319
13.3	Solving the Consensus and Tracking Problems	321
13.3.1	Linear Consensus for Networks with a Cluster Pattern	321
13.3.2	Tracking for Nonholonomic Systems.	324
13.4	Overall Controller Design	325
13.5	Simulation Results	328
13.5.1	Small-Scale Example: Ellipse Formation	328
13.5.2	Larger-Scale Example: Three-Leaf Clover Formation	329
13.6	Conclusions and Perspectives.	331
	References	331
14	Hybrid Consensus-Based Formation Control of Nonholonomic Mobile Robots	335
	Haci M. Guzey, Travis Dierks and Sarangapani Jagannathan	
14.1	Introduction.	335
14.2	Background on Hybrid Automata.	338

14.3	Hybrid Consensus-Based Formation Control of Holonomic Robots	340
14.3.1	Regulation Controller Design	341
14.3.2	Consensus-Based Formation Controller Design	342
14.3.3	Hybrid Consensus-Based Regulation and Formation Controller Design	344
14.4	Hybrid Consensus-Based Formation Control of Non-holonomic Robots	345
14.4.1	Nonholonomic Mobile Robot Equations of Motion	346
14.4.2	Regulation Controller of Mobile Robots	347
14.4.3	Consensus-Based Formation Control of Nonholonomic Mobile Robots	349
14.4.4	Hybrid Consensus-Based Formation Control	352
14.5	Simulation Results	354
14.5.1	Omnidirectional Robots	355
14.5.2	Nonholonomic Mobile Robots	357
14.6	Conclusions and Future Work	359
	References	360
15	A Multi Agent System for Precision Agriculture	361
	Amélie Chevalier, Cosmin Copot, Robin De Keyser, Andres Hernandez and Clara Ionescu	
15.1	Introduction	362
15.2	General Architecture	363
15.3	Methodology	365
15.3.1	Model Identification	365
15.3.2	Low-Level PID Cascade Control	369
15.3.3	High-Level Model-Based Predictive Control	373
15.4	Experimental Results	378
15.4.1	Formation Control of UGVs	379
15.4.2	Path Following for the Quadrotor	380
15.4.3	Quadrotor as Flying Sensor for Ground Agents	382
15.5	Conclusions	384
