1	Introduction: Self-Action Models	1
1.1	Self-Action Models	1
1.2	Unit in Biological Systems	4
1.3	Causality in Biological Systems	4
1.4	Incentives for Self-Action Models	5
1.5	Selfishware and Internet Being	6
1.6	Related Paradigms and Fields	8
1.6.1	Game Theory (with Evolutionary and Spatial Game Theory)	9
1.6.2	Network Science (with Graph Theory and Statistics)	10
1.6.3	Interacting Particle Systems (Based on Probabilistic Process Theory)	12
1.6.4	Reliability Theory	13
1.7	Structure of the Following Chapters	13
	References	16
2	Incentives for Repair in Self-Repair Networks	19
2.1	Introduction	19
2.2	Economic Theory for Selfish Agents	22
2.3	A Microscopic Model: Negotiation Between Agents	24
2.3.1	Prisoner's Dilemma	24
2.3.2	Models of System Reliability by Birth-Death Process	25
2.4	Discussion	30
2.4.1	Nash Equilibrium	30
2.4.2	Hamilton Rule as a Condition for Altruism	31
2.5	Conclusion	33
	References	34

3	A Phase Transition in Self-Repair Networks: Problems and Definitions	37
3.1	Introduction	37
3.2	Self-Repair by Copying: The Double-Edged Sword	38
3.3	Models of Probabilistic Cellular Automata	40
3.4	Relation with Domany-Kinzel Model and Other PCA	42
3.5	Agent-Based Simulation and Approximated Results	43
3.6	Conclusion	47
	References	48
4	Controlling Repairing Strategy: A Spatial Game Approach	49
4.1	Introduction	49
4.2	Spatial Strategies in SPD	52
4.3	A Model Incorporating SPD	54
4.4	Agent-Based Simulations with a Square Lattice	55
4.5	Conclusion	57
	References	58
5	Adaptive Capability in Space and Time	59
5.1	Introduction	59
5.2	Basic Model and Assumptions	62
5.3	Agent-Based Simulations in Heterogeneous and Dynamic Environments	63
5.3.1	Repair Rate Control with Systemic Payoff	64
5.3.2	Adaptation to a Heterogeneous Environment	66
5.3.3	Adaptation to a Dynamic Environment	68
5.4	Discussion	70
5.5	Conclusion	71
	References	71
6	Protection of Cooperative Clusters by Membrane	73
6.1	Introduction	73
6.2	Spatiotemporal Generalization of Prisoner's Dilemma	76
6.3	Spatial Strategies and Spatial Generosity	77
6.4	Conditions for Membrane Formation	78
6.5	Discussion	82
6.6	Conclusion	82
	References	82
7	Duality in Logics of Self-Repair	85
7.1	Introduction	85
7.2	Basic Model	87
7.2.1	Definitions and Extensions	87
7.2.2	Related Models	89

7.3	Steady-State Analysis	91
7.3.1	Mean Field Approximation	91
7.3.2	Synchrony or Asynchrony	92
7.4	Summary and Discussion	94
7.5	Conclusion	95
	References	95
8	Asymmetry Between Repair and Infection in Self-Repair Networks	97
8.1	Introduction	97
8.2	Basic Model	98
8.2.1	Definitions and Extensions	98
8.2.2	Repair Coupled with Infection	101
8.3	Analyses and Simulations	101
8.3.1	Steady-State Analysis	101
8.3.2	Simulation Results	103
8.4	Discussion.	104
8.5	Conclusion	105
	References	106
9	Dynamics of Self-Repair Networks of Several Types	107
9.1	Introduction.	107
9.2	Basic Model	109
9.2.1	Definitions and Extensions	109
9.2.2	Combining Self-Repair and Mutual Repair	110
9.3	Analyses and Simulations	110
9.3.1	Steady-State Analysis	110
9.3.2	Simulation Results	112
9.4	Transient-State Analysis to Combine the Self- and Mutual Repair.	115
9.5	Discussion: Implications for Antivirus Software	116
9.6	Conclusion	121
	References	121
10	Self-Repair Networks as an Epidemic Model	123
10.1	Introduction.	123
10.2	Parameters in the Self-Repair Network	124
10.2.1	A Summary of the Self-Repair Network	124
10.2.2	Steady-State Analysis with Pair Approximation	126
10.2.3	Steady-State Analysis with Mean Field Approximation.	127
10.2.4	Simulation Results	128
10.3	Self-Repair Network and SIS Model.	129
10.3.1	An SIS Model	129
10.3.2	Parameter Correspondence Between an SIS Model and a Self-Repair Network	129

10.4	Simulation Results	130
10.5	Conclusion	131
	References	132
11	Self-Repair Networks and the Self-Recognition Model	133
11.1	Introduction.	133
11.2	Self-Recognition Model and Dynamic Logics	134
11.3	Self-Repair by Copying: The Double-Edged Sword	136
11.3.1	A Model of the Self-Repair Network	136
11.3.2	Models of Probabilistic Cellular Automata.	137
11.3.3	Recognizing Abnormal Nodes Before Repair	138
11.4	Simulation Results	139
11.4.1	Impact of Recognition.	139
11.4.2	The Worst Case	139
11.4.3	Level of Recognition Required for Eradication of Abnormal Nodes	140
11.5	Conclusion	142
	References	142
12	Conclusion.	143
	Postscript: Challenges and Future	145
	Appendix	149
