

Contents

1	Fuzzy Numbers	1
1.1	Preliminary Theory	2
1.1.1	LR -type Fuzzy Numbers	5
1.1.2	T-Operators	6
1.2	Arithmetic of Fuzzy Numbers	9
1.2.1	Zadeh's Extension Principle	9
1.2.2	α -cuts Based Operations	10
1.2.3	Shape-Preserving Operations	12
1.2.4	Examples	14
1.3	Modelling Dependencies Between Fuzzy Numbers	17
1.3.1	Modelling Stochastic Dependencies	18
1.3.2	Interval Regression	20
1.4	Possibility and Credibility Theory	22
1.4.1	Non-linear Programming Approach	23
	References	24
2	Ordering of Fuzzy Numbers	27
2.1	Probabilistic Approach	28
2.2	Defuzzification Approach	31
2.3	Centroid-Point Approach	32
2.4	Yager Ranking Index Approach	34
2.5	Degree of Possibility Approach	34
2.6	Weighted Averaging Approach Based on α -cuts	35
2.7	Two-Dimensional Radius of Gyration Approach	37
2.8	Fuzzy Maximising-Minimising Points Approach	40
2.9	Area Based Approach	42
2.10	Left and Right Dominance Approach	43
2.11	An α -weighted Valuations Approach	44
	References	47

3	Fuzzy Random Variable and the Dempster-Shafer Theory of Evidence	49
3.1	Fuzzy Random Variable	49
3.2	Dempster–Shafer (D–S) Theory of Evidence	50
3.3	The Hybrid Data Propagation Method	52
	References	54
4	Multi-attribute Decision Making Process and Its Application	55
4.1	General Steps of a Multi-attribute Decision Making Process	57
4.2	Uncertainty in MADM	58
4.3	Fuzzy Analytical Hierarchical Process	60
4.3.1	Example I—Comparison of AHP Methods	62
4.3.2	Fuzzy TOPSIS	62
4.4	Example—Investment Strategy of the Steel Company	65
4.4.1	Calculation of Fuzzy Ratings	65
4.4.2	Computation of Performance Index of Criteria	68
	References	71
5	Risk Assessment in the Presence of Uncertainty	73
5.1	Description of Uncertainty in the Economic Risk Assessment	73
5.2	Measures of Risks in the Case of Hybrid Data	78
5.3	Computing an Operation Profit	79
	References	90
6	Application of Fuzzy Theory in Steel Production Planning and Scheduling	93
6.1	Fuzzy Grade Assignment	95
6.2	Scheduling of Production Processes Using Fuzzy Logic	99
6.3	Cooperation of Planning with Fuzzy Logic	107
6.4	Continuous Caster Scheduling Based on Fuzzy Lot-Sizing	111
	References	116
7	Application of Fuzzy Decision Trees in Analog Forecasting	119
7.1	Methods for Forecasting Apparent Consumption of Steel Products	120
7.2	Methodology	121
7.2.1	The k -means Method	122
7.2.2	Fuzzy Decision Trees	123
7.3	The Proposed Forecasting Method	126
7.4	Empirical Results	128
7.5	The Evaluation of Obtained Results	132
	References	133

8 Selected Issues of Visualisation of Fuzziness in Cardiac Imaging Data 135

8.1 Visualisation of Fuzzy Numbers 135

8.1.1 Visualisation of a Fuzzy Number 135

8.1.2 Visualisation of a Two Dimensional Fuzzy Point 137

8.1.3 Visualization of a Three-Dimensional Fuzzy Points 138

8.2 Scattered Fuzzy 3D Chart 139

8.2.1 Fuzzy Surface Plot 141

8.2.2 Imaging of Fuzziness of Cardiac Vessels Walls 144

8.2.3 *DICOM* Format Versus *STL* 145
