|                                                                                                                    |     |
|--------------------------------------------------------------------------------------------------------------------|-----|
| Efficiently Learning Bayesian Network Structures Based on the B&B Strategy: A Theoretical Analysis . . . . .       | 1   |
| <i>Joe Suzuki</i>                                                                                                  |     |
| Constraint-Based Learning Bayesian Networks Using Bayes Factor . . . . .                                           | 15  |
| <i>Kazuki Natori, Masaki Uto, Yu Nishiyama, Shuichi Kawano, and Maomi Ueno</i>                                     |     |
| Learning Bayesian Network Parameters from Small Data Set:<br>A Spatially Maximum a Posteriori Method . . . . .     | 32  |
| <i>Zhi-gao Guo, Xiao-guang Gao, Ruo-hai Di, and Yu Yang</i>                                                        |     |
| Hashing-Based Hybrid Duplicate Detection for Bayesian Network Structure Learning . . . . .                         | 46  |
| <i>Niklas Jahnsson, Brandon Malone, and Petri Myllymäki</i>                                                        |     |
| A Bayesian Network Approach for Predicting Purchase Behavior via Direct Observation of In-store Behavior . . . . . | 61  |
| <i>Yi Zuo, Katsutoshi Yada, and Eisuke Kita</i>                                                                    |     |
| Statistical Tests for Joint Analysis of Performance Measures . . . . .                                             | 76  |
| <i>Alessio Benavoli and Cassio P. de Campos</i>                                                                    |     |
| Extending Naive Bayes Classifier with Hierarchy Feature Level Information for Record Linkage . . . . .             | 93  |
| <i>Yun Zhou, John Howroyd, Sebastian Danicic, and J. Mark Bishop</i>                                               |     |
| Empirical Behavior of Bayesian Network Structure Learning Algorithms . . . .                                       | 105 |
| <i>Brandon Malone</i>                                                                                              |     |
| On Model Selection, Bayesian Networks, and the Fisher Information Integral . . . . .                               | 122 |
| <i>Yuan Zou and Teemu Roos</i>                                                                                     |     |
| Unsupervised Evolutionary Algorithm for Dynamic Bayesian Network Structure Learning . . . . .                      | 136 |
| <i>Jingguo Dai and Jia Ren</i>                                                                                     |     |
| A Fast Clique Maintenance Algorithm for Optimal Triangulation of Bayesian Networks . . . . .                       | 152 |
| <i>Chao Li and Maomi Ueno</i>                                                                                      |     |

|                                                                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Factorization of ZDDs for Representing Bayesian Networks Based<br>on $d$ -Separations . . . . .                                                        | 168 |
| <i>Shan Gao and Shin-Ichi Minato</i>                                                                                                                   |     |
| Missing Data from a Causal Perspective . . . . .                                                                                                       | 184 |
| <i>Karthika Mohan and Judea Pearl</i>                                                                                                                  |     |
| Learning Maximal Ancestral Graphs with Robustness for Faithfulness<br>Violations . . . . .                                                             | 196 |
| <i>Takashi Isozaki and Manabu Kuroki</i>                                                                                                               |     |
| Discriminative and Generative Models in Causal and Anticausal Settings. . . .                                                                          | 209 |
| <i>Patrick Blöbaum, Shohei Shimizu, and Takashi Washio</i>                                                                                             |     |
| A Non-Gaussian Approach for Causal Discovery in the Presence of Hidden<br>Common Causes. . . . .                                                       | 222 |
| <i>Shohei Shimizu</i>                                                                                                                                  |     |
| Forest Learning Based on the Chow-Liu Algorithm and Its Application to<br>Genome Differential Analysis: A Novel Mutual Information Estimation. . . . . | 234 |
| <i>Joe Suzuki</i>                                                                                                                                      |     |
| Tips and Tricks for Building Bayesian Networks for Scoring Game-Based<br>Assessments. . . . .                                                          | 250 |
| <i>Russell G. Almond</i>                                                                                                                               |     |
| <b>Author Index</b> . . . . .                                                                                                                          | 265 |

Advanced Methodologies for Bayesian Networks  
Second International Workshop, AMBN 2015,  
Yokohama, Japan, November 16-18, 2015. Proceedings  
Suzuki, J.; Ueno, M. (Eds.)  
2015, XVIII, 265 p. 102 illus. in color., Softcover  
ISBN: 978-3-319-28378-4
