<b>Dedication to Kevin Engle</b>	ix	<b>2 Satellite systems and interactions</b>	
<b>List of contributors</b>	xi	<i>Matthew Watson, Anupma Prakash</i>	27
<b>Preface</b>	xiii	2.1 Introduction and background	27
<b>Acknowledgments</b>	xvii	2.2 The electromagnetic spectrum	27
<b>DVD contents</b>	xix	2.2.1 Overview, nomenclature, and mathematical framework	27
<b>List of figures</b>	xxi	2.3 Introduction to remote sensing	32
<b>List of tables</b>	xxvii	2.3.1 Inverse problems	32
<b>List of abbreviations and acronyms</b>	xxix	2.3.2 Modes of remote sensing	32
		2.3.3 Platforms and orbit types	32
		2.3.4 Spatial, temporal, and spectral resolution	33
		2.4 Radiative transfer and atmospheric windows	35
		2.4.1 Definitions	35
		2.4.2 Interaction of radiation with matter	36
		2.4.3 The radiative transfer equation	39
		2.4.4 The atmosphere	40
		2.4.5 Atmospheric windows	40
		2.5 Atmospheric correction	42
		2.5.1 Using empirical techniques and ground truthing	43
		2.5.2 Using radiative transfer models	44
		2.6 The volcanological context	45
		2.6.1 Overview of following chapters	45
		2.6.2 Past and current missions	46
		2.6.3 Future missions	46
		2.7 Summary	46
		2.8 References	46
		<b>3 Thermal anomalies at volcanoes</b>	
		<i>Jonathan Dehn, Andrew J.L. Harris</i>	49
		3.1 Introduction	49
		3.2 Background	50
		3.3 The physics of thermal anomalies	52
<b>1 Setting, history, and impact of volcanic eruptions in the North Pacific region</b>			
<i>Kenneson Dean, Dave Rothery, John Eichelberger</i>	1		
1.1 Introduction	1		
1.2 Volcanological setting of the North Pacific	2		
1.2.1 Active volcanoes of the North Pacific region	3		
1.3 History of use of remote sensing for volcano studies and monitoring	9		
1.4 Impact of North Pacific eruptions on society	13		
1.5 The new perspective on monitoring volcanoes	19		
1.6 Conclusions	21		
1.7 References	21		

3.4	Volcanic processes that produce thermal anomalies	59	5.5.1	<i>Opaque clouds</i>	105
3.4.1	<i>Lava flows</i>	61	5.5.2	<i>Semi-transparent clouds</i>	106
3.4.2	<i>Lava domes</i>	63	5.6	Effects of emission parameters on satellite detection	106
3.4.3	<i>Lava lakes</i>	64	5.7	Influence of the atmosphere on volcanic clouds	107
3.4.4	<i>Pyroclastic flows and block-and-ash flows</i>	65	5.8	Cloud height estimations	112
3.4.5	<i>Debris flows</i>	66	5.8.1	<i>Temperature method</i>	112
3.4.6	<i>Explosive activity</i>	67	5.8.2	<i>Trajectory method</i>	115
3.4.7	<i>Intrusive activity</i>	67	5.8.3	<i>Cloud shadow method</i>	117
3.4.8	<i>Geothermal lakes</i>	69	5.8.4	<i>Ground-based radar method</i>	117
3.4.9	<i>Volcanic degassing</i>	69	5.8.5	<i>Stereoscopic methods</i>	120
3.5	Are there (satellite-based) thermal precursors to eruptions?	70	5.8.6	<i>Pilot reports</i>	120
3.6	Automated detection of thermal anomalies	70	5.8.7	<i>Comparing height estimates</i>	120
3.7	Higher level thermal products	72	5.9	Physical principles of ash detection in the infrared	123
3.7.1	<i>Eruption type</i>	72	5.9.1	<i>Volcanic ash detection</i>	123
3.7.2	<i>Discharge rate</i>	72	5.9.2	<i>Transmission of EM energy through a cloud</i>	124
3.8	Future work	72	5.10	Modeling radiative transfer in ash clouds	125
3.9	References	73	5.10.1	<i>A simplified model</i>	125
<b>4</b>	<b>Applications of high-resolution satellite remote sensing for northern Pacific volcanic arcs</b>		5.10.2	<i>Complex RT model</i>	127
	<i>Michael S. Ramsey, Jeffrey M. Byrnes, Rick L. Wessels, Pavel Izbekov</i>	79	5.10.3	<i>Retrieval method</i>	128
4.1	Introduction	79	5.10.4	<i>Size distributions, scattering parameters, and mass loading</i>	130
4.2	Background	80	5.10.5	<i>Mass loadings</i>	131
4.3	Applications	81	5.10.6	<i>Retrieval procedure</i>	131
4.3.1	<i>Feature identification using VNIR data</i>	81	5.11	Microphysical volcanic cloud model	132
4.3.2	<i>Compositional analysis using VNIR/SWIR data</i>	83	5.11.1	<i>Volcanic ash products</i>	133
