1	Introduction into Photonic Packaging	1
1.1	Optical Transmission Systems	1
1.2	System Applications of Optical Communications	4
1.2.1	Optical Telecommunication Systems	4
1.2.2	Optical Datacom Systems	8
1.2.3	Optical Systems in Cars and In-house Areas	11
1.3	Photonic Packaging and Interconnection Technology	15
	References	18
2	Optical Waveguides	23
2.1	The Most Important Optical Laws	23
2.1.1	Homogeneous Plane Wave	24
2.1.2	Phase and Group Velocity	26
2.1.3	Reflection	26
2.1.4	Refraction	27
2.1.5	Total Reflection	28
2.1.6	Numerical Aperture	29
2.2	Optical Fiber Profiles	29
2.2.1	Step Profile	31
2.2.2	Monomode Glass Fibers	33
2.2.3	Gradient profile	35
2.2.4	Phase-space Diagrams: ($\sin^2\Theta$ and r^2)	36
2.3	Dispersion	37
2.4	Attenuation	38
2.5	Polymeric Fibers	40
2.6	Optical Waveguides in InP, GaAs, PMMA, and SiO ₂	41
2.6.1	Geometry of Integrated Waveguides	43
2.6.2	Semiconductor Laser	44
2.6.3	PMMA-integrated Waveguides	45
2.7	SiO ₂ -Optical Waveguides	47
2.8	Production of Optical Fibers	48

2.9	Gas Phase Methods.	49
2.9.1	Drawing of Glass Fibers	52
2.9.2	Types of Fiber-Optic Cables.	53
	References.	54
3	Optical Mode-field Adaptation	57
3.1	Theory of Optical Mode-field Adaptation.	58
3.2	Definition of Field Radius	58
3.3	Approximations to Determine the Mode-field Radius.	64
3.4	Loss Mechanisms in the Waveguide Coupling	66
3.5	Coupling Efficiency in Case of Mode-field Mismatch	67
3.6	Coupling Efficiency in the Presence of Longitudinal Displacement	70
3.7	Coupling Efficiency in the Presence of Transverse Offset	72
3.8	Coupling Efficiency in the Presence of Angular Misalignment	73
	References.	75
4	Fiber-Optical Coupling	77
4.1	Adjusting Techniques	77
4.1.1	Active Techniques	77
4.1.2	Passive Techniques	78
4.2	Fixation Techniques	80
4.3	Characteristics of a Good Coupling.	81
4.4	Reflections.	82
4.5	Mode Fields in Waveguide Structures (Spot Size).	83
4.6	Coupling Efficiencies	85
4.7	Laser-Fiber Coupling	91
4.8	Waveguide Taper	97
4.9	Mode-Field Measurement Methods	97
4.9.1	Near-Field Method	98
4.9.2	Median-Field Method	100
4.9.3	Far-Field Method	107
4.10	Summary.	108
	References.	108
5	RF Lines	111
5.1	Maxwell's Equations.	111
5.2	Wave Types.	113
5.3	Conduction Equations	115
5.4	Skin Effect.	117
5.5	Coaxial Cables	118
5.6	Wave Impedance	120
5.7	Coplanar Lines	120

5.8	Substrate Materials	122
5.9	High-Frequency Connection of OEICs.	124
5.9.1	K-plug Connection	125
5.9.2	RF Supply from the Plug to the OEIC.	126
5.10	Production of Coplanar Lines.	127
5.10.1	TMM Substrate	127
5.10.2	Alumina Ceramic	129
5.10.3	Silicon.	130
	References.	131
6	Soldering, Adhesive Bonding, and Bonding	133
6.1	Die Bonding	133
6.2	Heat Sinks	134
6.3	Failure Mechanisms	137
6.4	Reliability Tests	138
6.5	Adhesive Bonding	138
6.6	Wire Bonding.	139
6.7	Thermo-compression Bonding	142
6.8	Ultrasonic Bonding	144
6.9	Thermo-sonic Bonding	145
6.10	Bonding Tools	145
	References.	147
7	Optical Connection Technology	149
7.1	Single-Fiber Connectors.	149
7.2	Multi-mode and Multi-fiber Connectors	151
7.3	Examples of Optical Connectors	152
7.4	Optical Fiber Tapers	157
7.4.1	Manufacturing of Fiber Tapers	157
7.4.2	Taper Measurement Setup	159
7.4.3	Measurement of the Reference Light Source	161
7.4.4	Measurement of the Reference Light Coupled to the Fiber	162
	References.	165
8	Active Adjustment Techniques	167
8.1	Micrometer Positioners	167
8.1.1	Mechanical Positioners	167
8.2	Laser Microwelding	173
8.2.1	Laser Welding Methods.	173
8.3	Criteria for the Choice of Welding Methods.	174
8.4	Laser Material Processing	175
8.5	Industrial Multi-point Laser Welding.	178

8.6	Laser Micro-welding for Modules with Tapered Fibers	180
8.6.1	Coupling Concept.	180
8.6.2	Module Setup.	183
8.6.3	Flange Setup	184
8.6.4	Welding Results	185
8.6.5	Initial Welding Results	186
8.6.6	Correction After Initial Welding	189
8.6.7	Dynamical Shift	191
	References.	192
9	Passive Adjustment Techniques	193
9.1	Flip-Chip Technique	193
9.1.1	Flip-Chip Bonder	200
9.1.2	Reduction of the Oxide Layers During Bonding	202
9.1.3	Flip-Chip-Bonding of Optical Components.	203
9.1.4	Metallization	204
9.1.5	Lithography	205
9.1.6	Coatings with Increased Layer Thickness.	207
9.1.7	Solder Deposition	208
9.1.8	Bonding Process.	209
9.2	LIGA Technique.	211
9.3	Laser Structuring of Si and PMMA.	213
	References.	215
10	Optical Motherboard	217
10.1	Flip-Chip Technique	217
10.2	Three-Level Concept.	219
10.2.1	First Level: FC-Bonding and Tapered Waveguide.	219
10.2.2	Second Level: Silica Waveguides	221
10.2.3	Third Level: Addition of RF Lines and Electrical ICs	222
10.3	PCB-Level Photonic Integration	223
10.3.1	PCB-Level Integrated Waveguides	224
10.3.2	Photonic Packaging for Optoelectronic Devices	230
10.3.3	Optical Coupling for Board-Level Interconnects	232
	References.	235
11	Fiber Optic Modules.	241
11.1	Fiber-Chip Coupling Mechanisms in Module Construction	241
11.1.1	Butt Fiber Couplings.	241
11.1.2	Single-mode Fiber Coupling.	242
11.1.3	Fiber Taper Coupling	243
11.2	Transmitter Modules with Cooling	244

11.3	Dual Inline Package Modules	246
11.3.1	Module Setup.	247
11.3.2	Laser Welding Results.	248
11.3.3	RF Results.	250
11.3.4	Environmental Tests	250
11.4	Receiver Modules	250
11.5	Transceiver Modules	256
11.6	Multi-fiber Modules with Butt-Ended Fibers	257
11.6.1	Device Characteristics	258
11.6.2	Optical Coupling Setup	258
11.6.3	Module Packaging	261
11.6.4	Environmental Stability	263
11.7	Multi-fiber Modules with Lensed Fibers	264
11.7.1	Coupling Concept.	265
11.7.2	Module Setup.	266
11.7.3	Coupling Procedure.	267
	References.	268
12	From Chip Design to the Optimum Package	269
12.1	General Requirements	269
12.2	Design Optimization with the Finite Element Method	270
12.3	Procedure of Finite Element Analysis and Software Packages	271
12.4	ANSYS Classic Introduction	275
12.4.1	Getting Help	275
12.4.2	Command Input	276
12.4.3	System of Units	276
12.4.4	ANSYS Selection Techniques	276
12.4.5	Working Plane	277
12.4.6	CAD Interfaces.	277
12.4.7	ANSYS Files	277
12.5	Programming Example	278
12.5.1	Introduction	278
12.5.2	Procedure of the Sequential Thermal Stress Analysis	279
12.5.3	Element Types	281
12.5.4	ANSYS Command Listing.	284
12.5.5	Programming Code Listing	285
12.6	Optical Simulation Programs	299
12.6.1	Mathematical Model of Ray Tracing Programs.	300
12.6.2	Basic Conventions of Optical Simulation Software	302
12.6.3	Strengths and Weaknesses of Ray Tracing	303

12.7	Overview of Different Simulation Programs	305
12.7.1	Simulation Programs Based on Wave Optics	305
12.7.2	Beam Propagation Method.	306
12.7.3	Finite-Difference Time-Domain Method.	306
	References.	307
13	Reliability Tests	309
13.1	Test Methods and Standards.	309
13.2	Standards Reference Sources	311
13.3	Stability Criteria of Telcordia Technologies	313
13.3.1	Transmitter and Receiver Modules	313
13.3.2	Arrayed Waveguide Grating Modules	313
13.4	Shaker Test Stations	316
	References.	318
	Index	319

Photonic Packaging Sourcebook

Fiber-Chip Coupling for Optical Components, Basic
Calculations, Modules

Fischer-Hirchert, U.

2015, XIX, 325 p. 287 illus., 16 illus. in color., Hardcover

ISBN: 978-3-642-25375-1
