

Preface

This thesis represents the result of my PhD study at the Chair of Logistics, University of Bremen from September 2008 to January 2014. These years have been a long and challenging journey, but I was fortunate enough to be accompanied by many people. Without their support I would have never finished my dissertation. I thank all of them, particularly the ones below.

First, I would like to express my great gratitude to my supervisor Prof. Herbert Kopfer. He offered me the opportunity to work at the Chair of Logistics and to conduct my PhD research. He was very open-minded in his supervision and I enjoyed very much the freedom he gave me to pursue the research direction I like. Throughout my study, he continuously supported me with his broad knowledge in the fields of logistics and operations research, and he inspired me with his enthusiasm for new problems and solution ideas. His professional comments and invaluable advices have helped me improve the scientific quality of this thesis.

My great gratitude goes also to PD Dr. Jörn Schöberger who is the second reviewer of my PhD thesis. The considerable discussions we had and the constructive suggestions he made on my work were very helpful. I would also like to thank Prof. Herbert Kotzab and Prof. Jan Dethloff for being my examiners in my PhD defense and thank Prof. Tobias Buer and Mario Ziebuhr for being members of the doctoral committee.

I am thankful to my colleagues from the Chair of Logistics Julia Funke, Mario Ziebuhr and Kristian Schopka for helping me with the proofreading of my thesis and for participating in my defense. My appreciation also goes to my former colleagues, especially Dr. Christoph Manuel Meyer, Dr. Marta Krajewska, and Dr. Sebastian Sterzik, for their help and the nice time we had together.

I would like to thank Prof. Stefan Ropke for the discussions we had during the time he visited the Chair of Logistics in 2008, which inspired me a lot. Furthermore, I thank Prof. Michel Gendreau for his hospitality during the time Prof. Kopfer, Prof. Buer and I visited him in Montréal in October 2011 and for our fruitful collaboration.

I am grateful to the editorial team of Gabler Verlag for publishing my PhD thesis, especially Prof. Thomas Stefan Spengler, Prof. Hans-Otto Günther, Ms. Marta Schmidt, and Ms. Nicole Schweitzer.

My special thanks go to my family, who have unconditionally supported me all this time. I thank my mother Shuzhi Wang and my father Jiaji Wang for their love and encouragement. The thought that I could always rely on them gave me great confidence in overcoming any obstacles on my journey. Apart from that, my mother took the time and effort to proofread the entire manuscript of my PhD thesis. Furthermore, I would like to thank my mother-in-law Yun Shi and father-in-law Li Yin for their confidence in me. My wife Shanshan Yin deserves a special word of appreciation for her moral support, for her patience and love. It is a great fortune to have her on my side.

Last but not least, I would like to thank my daughter Xinghao Olivia for the excitement and happiness she brought me. I will never forget the moments when I was writing this thesis on the computer and she, who was only one year old at that time, came to me, climbed up my legs with assistance, and “helped” me by simply typing any randomly chosen characters. Such sweet actions of hers were the best I have got to relieve the pressures.
