List of Tables XV

Abbreviations XVII

1 Introduction 1

1.1 Request fulfillment of freight forwarding companies 1

1.2 Objectives and Structure of the Thesis 3

2 Vehicle Routing 7

2.1 Introduction 7

2.2 Mathematical model for the PDPTW 11

2.3 Solution approaches for the PDPTW 14

2.3.1 Exact algorithms 15

2.3.2 Heuristic algorithms 16

2.4 The ALNS heuristic of Ropke and Pisinger(2006) 17

2.4.1 General ideas 18

2.4.2 Removal operators 19

2.4.3 Insertion operators 20

2.4.4 Adaptive operator choice 21

2.4.5 Further settings 22

3 Freight Consolidation 25

3.1 Introduction 25

3.2 Mathematical formulation 28

3.3 Solution methodology 31

3.3.1 A local search heuristic 31

3.3.2 A simulated annealing heuristic 34

3.4 Computational experiments 37

3.4.1 Cost function for the freight charge calculation 37

3.4.2 Test instances 39

3.4.3 Computational results 40

3.5	Conclusions	41
4	From Cherry-Picking to Integrated Operational Transportation Planning	43
4.1	External transportation resources in subcontracting	44
4.2	Cherry-Picking	46
4.3	Integrated operational transportation planning	48
4.3.1	Literature review	49
4.3.1.1	Subcontracting vehicle routes	49
4.3.1.2	Subcontracting requests to common carriers	50
4.3.1.3	Subcontracting both routes and requests	52
4.3.2	Mathematical model	52
4.4	Reducing long-term costs through integrated planning	54
5	Solution approaches for the integrated operational transportation planning problem	57
5.1	Adaptive large neighborhood search	58
5.2	Heuristic II: An iterative approach	59
5.2.1	A set partitioning model of the IOTPP	59
5.2.2	Construction of candidate routes	61
5.2.3	Obtaining integer solutions	64
5.2.4	Overview of the heuristic	64
5.3	Computational experiments	65
5.3.1	Instance generation	65
5.3.2	Computational results	67
5.4	Conclusions	69
6	Collaborative transportation planning	71
6.1	Introduction	72
6.2	Design of request exchange mechanisms	74
6.3	Mathematical formulation	77
6.4	Request exchange mechanisms in literature	78
7	A route-based request exchange mechanism for the collaborative transportation planning	83
7.1	The route-based request exchange mechanism	83
7.1.1	Preprocessing	85
7.1.2	Initial route generation	86
7.1.3	Temporary winner determination	87

7.1.4	Iterative route generation	88
7.1.5	Final winner determination	90
7.2	Computational experiments	92
7.2.1	Test instance generation	92
7.2.2	Route generator	94
7.2.3	Computational results	95
7.2.4	Discussion of results	96
7.3	Conclusions	99
8	Collaborative integrated operational transportation planning	101
8.1	Problem definition	101
8.2	Solution approach for collaborative planning	103
8.2.1	Preprocessing	104
8.2.2	Initial route generation	104
8.2.3	Temporary winner determination	106
8.2.4	Iterative route generation	106
8.2.5	Final winner determination and flow of payments	108
8.3	Computational Experiments	109
8.3.1	Instance generation	110
8.3.2	Isolated and centralized planning	110
8.3.3	Collaborative planning	111
8.4	Conclusions	112
9	Dynamic collaborative transportation planning	115
9.1	Literature review	115
9.2	Problem definition	117
9.3	Solution approaches	118
9.3.1	Rolling horizon planning with fixed interval	118
9.3.2	Request triggered rolling horizon planning	119
9.3.3	Determination of due requests	121
9.3.4	Planning strategies using advanced request information	121
9.3.5	Identification of requests for exchange	123
9.3.6	Extended route-based request exchange mechanism	123
9.4	Conclusions	126

10 Computational study on the dynamic collaborative transportation planning	127
10.1 Test 1: Dynamism of instances	127
10.1.1 Measuring dynamism of instances	127
10.1.2 Instance generation	128
10.1.3 Simulation results	130
10.2 Test 2: Value of advanced request information	132
10.2.1 Instance generation	132
10.2.2 Simulation settings	133
10.2.3 Results and discussion	133
10.3 Test 3: Length of the planning period in <i>RHP-INT</i>	135
10.3.1 Simulation settings	135
10.3.2 Results and discussion	135
10.3.2.1 Total costs of the solutions	136
10.3.2.2 Cost-savings through CTP	138
10.4 Test 4: Length of the planning horizon in <i>RHP-RT</i>	139
10.4.1 Simulation settings	139
10.4.2 Results and discussion	139
10.4.2.1 Total costs of the solutions	139
10.4.2.2 Comparison between <i>RHP-INT</i> and <i>RHP-RT</i>	140
10.5 Test 5: Planning with high subcontracting costs	141
10.5.1 Instance adjustment and simulation settings	141
10.5.2 Results and discussion	141
10.6 Conclusions	145
11 Conclusions and future research	147
11.1 Summary and conclusions	147
11.2 Outlook of future research	150
Bibliography	153

Operational Transportation Planning of Modern Freight
Forwarding Companies

Vehicle Routing under Consideration of Subcontracting
and Request Exchange

Wang, X.

2015, XVIII, 161 p. 34 illus., Softcover
